U.S. Green Card Holder — Authorized to Work Without Sponsorship

PROFESSIONAL SUMMARY

Java Developer with 5+ years of experience building sophisticated, large-scale applications and RESTful APIs using Java, Spring Boot, and Microservices Architecture, grounded in strong object-oriented design principles and design patterns. Skilled in full-stack delivery with Angular, SQL/relational database optimization (MySQL, PostgreSQL, Oracle, IBM DB2), and Agile SDLC practices from technical design through production support. Proven ability to optimize system performance, reduce complexity, and deliver zero-downtime, tier-1 enterprise platforms while collaborating across cross-functional teams.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Spring MVC, Spring Security, Hibernate ORM, JavaScript, RESTful / Web Services (REST) API Design

Architecture & Design: Microservices Architecture, Object-Oriented Design Principles, Design Patterns, Java EE, Systems Design, Full SDLC

Full-Stack / UI: Angular, HTML5, CSS3, Bootstrap, jQuery, AJAX, XML, JSON, JSP

Databases & SQL: MySQL, PostgreSQL, Oracle (Knowledge), IBM DB2, SQL query optimization & schema design, NoSQL (Familiar)

Process & Methodologies: Agile/Scrum SDLC, ETL, Object-Oriented Programming (OOP)

DevOps & Tools: CI/CD Pipelines, Git, JIRA

Testing & Monitoring: JUnit, Splunk, Postman

Messaging & Integration: IBM WebSphere MQ, Java EE Message-Driven Beans (asynchronous transaction processing)

EXPERIENCE

Software Engineer — Infor Nexus (Infor Global Supply Chain Platform) | Remote, U.S.-based teams

08/2022 – 09/2025

Global Trade Management Platform — a cloud-based, tier-1 enterprise network managing workflows, logistics execution, and tracking across operations in 50+ countries.

- Designed, developed, and maintained Java components across the full Software Development Lifecycle (SDLC), including requirements analysis, technical specification writing, coding, testing, and production support.
- Optimized SQL queries, database joins, and indexes while redesigning reporting business objects and ETL transformation logic, dropping core module complexity by 25% and improving dashboard performance.
- Developed and optimized the core VendorBooking ('Plan to Ship') module through targeted code refactoring, reducing average booking processing time by 30%.
- Built and maintained Java EE Message-Driven Beans (MDBs) integrated with IBM WebSphere MQ to process high-volume asynchronous business transactions across supply chain workflows.
- Evaluated and implemented new technologies aligned with cloud-first initiatives, developing features deployable on high-availability cloud infrastructure.
- Engineered comprehensive JUnit test suites that increased code coverage by 35%, reducing defect escape rates into production.
- Used Splunk for real-time application performance monitoring and proactive error detection.

Associate Software Engineer — Itzorig | Sri Lanka

02/2021 – 07/2022

ERP System — a full-stack web platform automating business processes, workflow tracking, inventory procurement, and financial operations.

- Architected, developed, and deployed scalable RESTful microservices using Java and Spring Boot, supporting a platform executing thousands of daily transactions with zero data-integrity incidents.
- Designed and normalized relational database schemas with advanced SQL indexing strategies, increasing data retrieval speed by up to 50%.
- Enforced stateless authentication and fine-grained authorization using Spring Security and JSON Web Tokens (JWT) across all API endpoints.
- Implemented automated CI/CD pipelines to streamline code building, verification, and zero-downtime deployment workflows.
- Built modular front-end interfaces with Angular integrated with secure Spring Boot backends.
- Built automated tracking and reporting workflows via JasperReports, cutting manual data extraction time by 70%.

Trainee Software Engineer — Prime Engineering Lanka | Sri Lanka

10/2019 – 06/2020

ERP System — a full-stack platform automating business processes and inventory procurement for emission centers.

- Implemented backend workflows with Spring MVC and Hibernate ORM to automate compliance-heavy data capture and validation, reducing manual entry requirements by 40%.
- Designed relational schemas and mapped persistent object states to MySQL databases, ensuring performance and audit-record integrity.
- Built responsive UI layouts with HTML5, CSS3, Bootstrap, and jQuery, bridging front-end views with Java business logic via AJAX.

EDUCATION

Sri Lanka Institute of Information Technology (SLIIT) | Sri Lanka

Bachelor of Science (Honours) in Information Technology — 2021
