

Senior Test Engineer

Name: **Srikanth**

Phone: **872-256-2139**

Email: **qasrikanth88@gmail.com**

Professional Summary:

- Senior QA Automation Engineer / SDET with **12+ years of experience** in software quality engineering, test automation, API testing, and Agile delivery across **Healthcare, Financial Services, Telecommunications, Retail, Smart TV, IoT, and E-Commerce** domains.
Strong expertise in designing and maintaining **Selenium WebDriver, Playwright, Cypress, Appium**, and API automation frameworks using **Java, JavaScript**, and **Python** with extensive experience in TestNG, JUnit, Cucumber BDD, CI/CD, and enterprise automation framework development.
- Experienced in functional, non-functional, security, **API, microservices**, resilience, and chaos testing with hands-on expertise in **CI/CD**, Docker, Kubernetes, performance validation, fault simulation, and production readiness testing.
- Hands-on experience in **REST API testing, microservices validation, SQL database testing, CI/CD pipelines, and cloud-integrated applications** using Postman, REST Assured, Jenkins, Azure DevOps, and GitHub.
- Proven success in building scalable automation frameworks, improving regression coverage, reducing manual testing effort, and accelerating release cycles.
- Experienced in **Smart TV platforms, IoT, Bluetooth/BLE, Wi-Fi, Mobile Applications, Healthcare Diagnostics, and Payment Processing systems**.
- Skilled in Agile Scrum environments with strong experience in test planning, defect management, stakeholder collaboration, and end-to-end quality assurance.
- Effective team player with excellent problem-solving, communication, mentoring, and continuous improvement skills.

Technical Skills

Category	Skills
Languages	Java, JavaScript, Python, SQL
Automation	Playwright, Selenium WebDriver, Cypress, Appium
Frameworks	TestNG, JUnit, Cucumber BDD, POM
API Testing	REST Assured, Postman, REST APIs, SOAP UI
Database	SQL, PL/SQL, Data Validation, ETL Testing
Performance	JMeter, Load Testing, Stress Testing
Cloud & DevOps	AWS, GCP, Docker, Kubernetes, Jenkins, Azure DevOps, Git
Tools	Jira, HP ALM, Splunk, Power BI
AI Tools	GitHub Copilot, ChatGPT, AI-Assisted Testing
Methodologies	Agile Scrum, SDLC, STLC, CI/CD

Education: Master's in information technology and management, Campbellsville, KY 2016

Walmart (Vizio) – Dallas, TX

Project Description

Smart TV platform supporting **LokiMenu, OOB, Conjure, Voice Services, CTA, Network Connectivity, Casting, Streaming, and Device Provisioning** across customer-facing Smart TV ecosystems.

Job Duties: Developed and executed functional, integration, system, regression, and end-to-end test scenarios across distributed applications and microservices architectures.

- Developed and maintained **Playwright** automation scripts using JavaScript/TypeScript for UI validation, regression testing, and end-to-end business workflows.
- Performed API and microservices testing to validate service-to-service communication, backend integrations, and data workflows.
- Executed non-functional testing including performance, scalability, reliability, and availability testing to improve production readiness.
- Collaborated with DevOps and Engineering teams to validate containerized applications deployed through CI/CD pipelines and cloud-integrated environments.
- Utilized Splunk and observability tools to analyze application behavior, identify root causes, and support production validation activities.
- Developed and maintained Cypress (JavaScript) and Selenium automation frameworks for UI, API, regression, and end-to-end testing.
- Designed and executed test strategies for TV UI, backend APIs, account activation, connectivity, voice workflows, and release validation.
- Validated backend services using Postman, REST Assured, and JSON/XML payload verification.
- Performed OOB, Voice Assistant, and Network (Wi-Fi/Ethernet) testing, including setup, activation, connectivity, and recovery scenarios.
- Investigated production and integration issues using Splunk, Wireshark, Charles Proxy, device logs, and backend traces.
- Integrated automation into Jenkins CI/CD pipelines to support build validation, regression execution, and release readiness.
- Executed chaos and resilience testing by simulating service failures, network disruptions, dependency outages, and recovery scenarios.
- Performed fault-injection testing including service restart validation, latency simulation, resource exhaustion testing, and recovery verification.
- Validated containerized applications deployed in Docker and Kubernetes environments to ensure scalability, reliability, and production readiness.
- Collaborated with DevOps, SRE, Security, and Product teams to support release readiness, observability validation, and operational excellence initiatives.
- Developed and executed functional, integration, system, regression, and end-to-end test scenarios across Smart TV and connected-device ecosystems.
- Executed non-functional testing including performance, load, scalability, reliability, and availability testing to validate platform stability.

- Validated application behavior under failure conditions through resilience and recovery testing across network, device, and backend services.
- Collaborated with Engineering, DevOps, and QA teams to integrate automated test suites into CI/CD pipelines and support release validation activities.
- Utilized Splunk, monitoring tools, logs, and system traces to analyze production incidents, identify root causes, and improve system reliability.

Environment: Playwright, Selenium WebDriver, JavaScript, REST Assured, Postman, Jenkins, CI/CD, Splunk, Jira, SQL, Git, Wi-Fi/Ethernet, Wireshark, Charles Proxy, Agile Scrum.

Client: Quest Diagnostics, Virginia

April 2021 to Mar 2024

Role: Senior Software Quality Engineer

Project Description: Quest Diagnostics has a variety of applications to make its end-to-end customer experience seamless when it comes to performing diagnostic tests. Their product includes an appointment scheduler and integration with third-party cloud-based LIS systems such as LabOS to provide cutting-edge experience when it comes to performing medical diagnosis.

- **Job Duties:**
- Validated REST APIs using Postman, REST Assured, JSON payload verification, and HTTP methods including GET, POST, PUT, and DELETE.
- Executed functional, integration, system, regression, and end-to-end testing across cloud-based healthcare applications and microservices ecosystems.
- Performed non-functional testing including performance, load, scalability, and reliability testing to validate system behavior under varying workloads.
- Executed security validation activities covering authentication, authorization, API security, session management, and access control mechanisms.
- Performed resilience and recovery testing by validating service restart, dependency failure, and fault recovery scenarios.
- Analyzed application logs, monitoring data, and test results to identify root causes and support issue remediation.
- Validated ETL workflows, API responses, and database transactions across cloud-integrated healthcare applications to ensure data accuracy and consistency.
- Executed backend automation testing by comparing API responses, database records, and reporting outputs to validate end-to-end data integrity.
- Worked with cloud-hosted healthcare applications and integrated services deployed within GCP/AWS-based environments.
- Automated UI, API, regression, smoke, and end-to-end test scenarios using Selenium, TestNG, Cypress, and Page Object Model (POM) frameworks.
- Created automated REST API and microservices tests using Rest Assured, Postman, Java, and Spring Boot.
- Performed end-to-end validation of REST APIs, microservices, backend systems, and database transactions to ensure data integrity and business rule compliance.

- Executed functional, integration, regression, and system testing across cloud-based healthcare applications and third-party integrations.
- Performed non-functional testing including load, performance, scalability, capacity, and reliability testing to validate application performance.
- Executed security testing activities including authentication, authorization, API validation, session management, and common application security controls.
- Validated application resilience through fault simulation, service restart validation, dependency failure testing, and recovery verification scenarios.
- Collaborated with QA, Development, DevOps, and Product teams to investigate defects, perform root cause analysis, and improve production readiness.
- Executed fault-injection and resilience testing by validating application behavior during dependency failures, service interruptions, and recovery scenarios.
- Collaborated with Development, DevOps, SRE, and Security teams to improve system reliability, availability, and production readiness.

Environment: Playwright, Selenium WebDriver, Cypress, JavaScript, REST Assured, Postman, REST APIs, Jenkins, CI/CD, Splunk, Jira, SQL, Git, Wi-Fi/Ethernet, Wireshark, Charles Proxy, Agile Scrum.

Role: SDET / QA Automation Engineer

May 2018 to March 2021

Client: Mastercard, O'Fallon, Missouri

Project Description: This project is to integrate **Claims Manager** and **MasterCom** applications. **Claims Manager** is responsible for initiating Disputes. While initiation flow is handled by the **Claims Manager**, the necessary supporting documents need to be uploaded into the **MasterCom** system.

Job Duties: Developed and maintained UI and API automation frameworks using Selenium WebDriver, Robot Framework, and Java.

- Automated end-to-end, integration, regression, and cross-browser test scenarios using Selenium, TestNG, and Cucumber BDD.
- Designed and maintained Selenium WebDriver automation frameworks using Java, TestNG, and Cucumber BDD following Page Object Model (POM) design patterns.
- Performed data validation and backend testing by developing complex SQL queries to validate source-to-target data mappings, healthcare transactions, and business rule compliance.
- Validated ETL workflows, API responses, and database transactions across cloud-integrated healthcare applications to ensure data accuracy and consistency.
- Executed backend automation testing by comparing API responses, database records, and reporting outputs to validate end-to-end data integrity.
- Developed reusable automation utilities for validating large data sets, API payloads, and database transformations.
- Worked with cloud-hosted healthcare applications and integrated services deployed within GCP/AWS-based environments.

- Integrated automated test suites into Jenkins CI/CD pipelines using Docker to support continuous testing and release readiness.
- Built reusable automation utilities and self-service execution capabilities to improve test efficiency and business usability.
- Performed frontend, API, and backend validation using Selenium, SQL, PL/SQL, and REST/SOAP testing tools.
- Executed cross-browser testing using Selenium WebDriver, TestNG, and Sauce Labs.
- Validated payment processing workflows through comprehensive integration and regression testing.
- Collaborated with Product, Development, QA, and Business teams in an Agile Scrum environment to deliver high-quality releases.
- Utilized Git for source code management and version control of automation assets.
- Participated in sprint planning, daily standups, defect triage, and release validation activities.

Environment: Java, JavaScript, Playwright, Cypress, Selenium WebDriver, TestComplete, REST Assured, Postman, REST APIs, Spring Boot, GCP, TestNG, JUnit, Maven, Cucumber BDD, Jenkins, CI/CD, GitHub, Bitbucket, SQL, IntelliJ IDEA, Agile Scrum.

Client: Verizon Communications, Dallas, TX

Sep 2016- April 2018

Role: QA Automation Engineer

- **Job duties:** Developed and maintained Selenium WebDriver and Appium automation frameworks using Java for web and mobile applications Developed and maintained Selenium WebDriver and Appium automation frameworks using Java for web and mobile applications
- Performed Android, iOS, IoT, functional, regression, integration, and system testing for connected-device platforms.
- Designed and executed test plans, test cases, test strategies, and defect reports based on business and technical requirements.
- Automated device communication and protocol validation using Java, JavaScript (Node.js), and C.
- Validated Bluetooth, BLE, Wi-Fi, IoT protocol translators, and embedded device communication workflows.
- Executed API and backend testing using SOAP UI, SQL validation, and HTTP-based integrations.
- Performed connectivity, interoperability, throughput, battery, memory, and sensor validation testing across mobile and IoT devices.
- Investigated production and connectivity issues using Wireshark, protocol analysis tools, and device logs.
- Partnered with development, firmware, and QA teams to perform defect triage, root cause analysis, and release validation.
- Executed User Acceptance Testing (UAT) and backend validation while supporting production releases.

Environment: Java, Selenium WebDriver, Appium, TestNG, Jenkins, SOAP UI, SQL, PL/SQL, Git, HP ALM, JavaScript (Node.js), Wireshark, Bluetooth, BLE, Wi-Fi, IoT, UNIX, Mobile Testing, API Testing, Agile Scrum

Client: Media Forge Business Solutions Inc -Hyderabad, INDIA

June 2013 -Mar 2015

Role: QA Tester

Project Description: It is a backend catalog application for Easy Price mobile applications. It will pull items and its details from e-commerce applications such as (e-Commerce) Flipkart, Amazon and SnapDeal and based on our own matching algorithm it will display the top 3 corresponding items to match.

Job Duties: Worked as a Manual Tester with developer and support teams to test web-based applications for the client.

- Perform functional testing such as Smoke Testing, User Interface testing, Integration testing, Regression testing, Security testing and Performance testing.
- Explanation of the security requirements to the design team in the initial stages of SDLC to minimize the efforts to rework on issues identified during penetration tests.
- Performed GUI Testing, Functional, and Testing manually
- Designed and developed test plans, and test scripts, for manual testing of all the modules.
- Performed extensive Data Integrity testing by executing SQL Statements.
- Supported with the testing team when there are production issues by doing Emergency Bug fix testing. Maintained defects in the Quality Centre based on the Defect Tracking Life Cycle.

Environment: Quality Center, SQL, HTML, XML, Waterfall testing, Eclipse, UAT, Apache, Win Runner.
