

# SOWMYANAMALA

San Jose, CA | 945-266-0445 | [sowmyanamala1999@gmail.com](mailto:sowmyanamala1999@gmail.com) | [LinkedIn](#)

## SUMMARY

Full Stack Software Developer with 5+ years of experience in design, development, and deployment of enterprise-grade applications across healthcare and finance domains. Experienced in both front-end and back-end development using Angular, React, JavaScript, Python (Flask), Java Spring Boot, and C# (.NET Core), building secure and scalable APIs and microservices. Hands-on with monitoring and observability tools including Splunk, Grafana, and Datadog for performance tracking, root-cause analysis, and proactive issue resolution. Experienced integrating services with relational and NoSQL databases (SQL Server, Oracle, MySQL, MongoDB), and proficient in REST API and microservices design across distributed enterprise systems. Strong understanding of CI/CD pipelines, containerization with Docker, and orchestration with Kubernetes, using GitHub Actions, Jenkins, and Azure DevOps.

## TECHNICAL SKILLS

|                         |                                                                                                                      |
|-------------------------|----------------------------------------------------------------------------------------------------------------------|
| Frontend                | React.js, Angular, JavaScript, TypeScript, HTML5, CSS3                                                               |
| Backend                 | Java (Spring Boot), Node.js, Python (Flask, FastAPI), C# (.NET Core), C++                                            |
| API & Integration       | API Gateway, REST APIs, Microservices, OAuth2, JWT, Authentication & Authorization                                   |
| OCR & EDI Tools         | FormWorks (FIS), Document Capture Manager, 837/834 EDI formats                                                       |
| Databases               | SQL Server, MySQL, Oracle, NoSQL, MongoDB                                                                            |
| Testing                 | Jest, Jasmine, Karma, JUnit, Selenium, Mockito, RestAssured                                                          |
| DevOps & CI/CD          | Git, Jenkins, Azure DevOps, GitHub Actions, Docker, Kubernetes, Helm                                                 |
| Monitoring & Logging    | Splunk, Grafana, Datadog, Prometheus                                                                                 |
| AI/ML & MLOps Tools     | MLflow, NLP (NLTK, SpaCy), LLM (Hugging Face Transformers), Model Deployment, Model Tracking                         |
| Cloud Platforms         | AWS (S3, Lambda, RDS, EC2), Microsoft Azure (App Service, Functions, Blob Storage, AKS), Docker, Kubernetes, Jenkins |
| Version Control & Tools | Git, Bitbucket, Jira, Postman, Swagger UI, SoapUI, Visual Studio, IntelliJ, VS Code                                  |

## PROFESSIONAL EXPERIENCE

Software Engineer | Tetra Computing (Client: Delta Dental) | San Jose, CA

Oct 2025 – Present

- Designed and developed RESTful APIs in Java Spring Boot microservices using OOP principles, design patterns, and clean architecture, building scalable and reusable services.
- Integrated Oracle databases and external partner systems securely with OAuth2 authentication, ensuring data integrity and access control.
- Developed JUnit unit and regression test suites, improving code reliability and preventing production regressions.
- Used Postman extensively for API testing, validation, and debugging across multiple environments.
- Optimized complex SQL queries on Oracle DB and SQL Server for data validation and reporting, reducing investigation and audit turnaround time by 25%.
- Built and maintained OCR healthcare automation workflows with FormWorks (FIS) for processing paper claims and 837 EDI files, ensuring accuracy and compliance.
- Applied NLP techniques using NLTK and SpaCy to support healthcare text-processing and document automation workflows, improving data extraction and processing efficiency.
- Used MLflow for model tracking and experiment management, supporting model deployment and monitoring workflows for AI/ML automation use cases.
- Monitored application performance and observability using Datadog, tracked Agile tasks in Jira, and automated deployments via GitHub Cloud pipelines, with documentation in Confluence.

Software Engineer | Evu Inc | Remote

Jun 2025 – Oct 2025

- Developed and deployed a full-stack booking platform with secure payment integration, reducing manual scheduling effort by 40%.
- Designed responsive UI using React.js, Next.js, and JavaScript, enabling clients to filter services by location, gender, age, availability, and price.
- Built backend workflows using Java Spring Boot and MySQL, ensuring reliable synchronization between clients, therapists, and booking services.
- Integrated NLP capabilities using NLTK and SpaCy to support text processing and intelligent service-search workflows.
- Leveraged Hugging Face Transformers and LLM-based models to enhance automated service recommendations and improve user interactions.
- Used MLflow for model tracking, experiment management, and performance monitoring across AI/ML workflows.
- Implemented model deployment workflows and integrated AI/ML services with backend APIs, supporting scalable and reliable application functionality.
- Implemented therapist-facing features to manage appointments and booking history, improving service turnaround time by 30%.
- Configured CI/CD pipelines with GitHub and Vercel for automated deployments and streamlined release management.
- Implemented unit and integration testing using Jest and React Testing Library, improving code reliability and UI stability.

Software Engineer Intern | Amadeus North America | Irving, Texas

May 2024 – Apr 2025

- Developed and maintained responsive UI using Angular and TypeScript, and backend APIs using Python Flask, hosted on Microsoft Azure Cloud.
- Built and consumed Flask REST API endpoints in Python to support airline rule validation logic, integrating seamlessly with the Angular front end.

- Automated TR creation in WinApproach, integrated with GitHub PRs, removing database dependency and manual approvals to cut deployment cycle time by 30% and reduce costs.
- Managed business rules defined in XML format, enabling dynamic rule creation, validation, and modification within the application.
- Modernized Rule Changer's architecture and automated processes, leveraging Node.js for Angular CLI build and deployment automation, boosting processing efficiency by 40% and enhancing user experience by 30%.
- Containerized the application with Docker, orchestrated deployments using Kubernetes, designed CI/CD pipelines in Jenkins, and deployed to Azure using Helm charts and isolation zones for secure, scalable, and reliable delivery.
- Developed automated unit tests for Angular modules using Jasmine and Karma.

**Full Stack Developer | JP Morgan Chase & Co | Hyderabad, India**
**Aug 2020 – Jan 2023**

- Developed scalable Java backend microservices and RESTful APIs using Spring Boot, JPA, and Hibernate for internal enterprise applications.
- Implemented secure endpoints using Spring Security, JWT, OAuth2, and enforced Role-Based Access Control (RBAC) through API Gateway.
- Implemented multithreaded processing for parallel execution of transactions using Java concurrency utilities.
- Optimized SQL Server queries and stored procedures to improve transaction performance and reduce latency.
- Developed dynamic, responsive UI components using Angular, JavaScript, AJAX, JQuery, HTML, and CSS, supporting 3000+ Chase branches and devices and improving operational visibility by 30%.
- Developed RabbitMQ based messaging services for decoupled communication between microservices.
- Developed backend components using C# and migrated legacy .NET Framework applications to .NET Core, building REST APIs and business logic layers integrated with SQL Server for enterprise applications.
- Designed CI/CD pipelines in Jules, Jenkins, and GitHub Actions, for automated build, test, and deployment processes, tracking progress in Jira for Agile task management.
- Provided production support, debugged incidents using Splunk, and monitored service health with Prometheus and alerting systems.
- Deployed and managed Spring Boot applications on Apache Tomcat Server, ensuring reliable hosting and configuration across development and production environments.
- Worked on distributed systems architecture, ensuring scalable communication between services, and improving system throughput and reliability across environments.
- Contributed to all phases of the Software Development Life Cycle (SDLC), including requirement gathering, design analysis, code development, debugging, testing, and troubleshooting.
- Utilized jQuery for efficient DOM manipulation and event handling in dynamic, responsive UI components.
- Developed unit and integration tests following TDD practices using JUnit, Mockito, Selenium, achieving 70%+ code coverage in SonarQube and resolving security vulnerabilities identified by Fortify scans.
- Leveraged Entity Framework to connect to SQL Server, replacing complex logic with optimized stored procedures, resulting in 30% faster response times and improved data security.
- Utilized RabbitMQ for asynchronous processing and reliable delivery of ticketing data to external vendor systems, ensuring seamless communication and fault tolerance.
- Collaborated in Agile/Scrum environments using Git for version control, participating in sprint planning, stand-ups, retrospectives, and team demos to ensure high-quality, on-time delivery.

**Software Engineer Intern | Chronus Software | Hyderabad, India**
**May 2019 – Jul 2019**

- Enhanced the Mentor Recommendation feature within Chronus mentoring software using the Ruby on Rails technology stack and PostgreSQL, improving the accuracy and relevance of mentor-mentee matching.
- Implemented an email classification feature using Ruby on Rails to differentiate between formal and informal emails before sending messages to mentors, ensuring professional communication.
- Conducted thorough behavior-driven testing (BDD) using Cucumber, identifying, and fixing 15+ potential bugs in production.

**EDUCATION**

|                                                                                                |                     |
|------------------------------------------------------------------------------------------------|---------------------|
| Master of Science, Computer Science — University of North Texas, United States (4/4)           | Jan 2023 – Dec 2024 |
| Bachelor of Engineering, Computer Science — National Institute of Technology, Warangal (3.6/4) | Aug 2016 – May 2020 |
