ABOUT ME:

Senior SDET / QA Automation Lead Engineer with over 10+ years of experience in Web, Mobile, API, ETL, and Cloud testing across Banking, Air Lines, Salesforce, Healthcare, ERP, and Retail domains. Experts in Java, Python, Selenium, SQL, TestNG, Playwright, REST Assured, and CI/CD pipelines, with strong hands-on skills in AWS, Azure, Snowflake, and Kubernetes. Proven ability to build scalable automation frameworks and deliver high-quality solutions in fast-paced Agile environments.

Professional Summary:

- Expert in understanding, analyzing, and tracking requirements, as well as maintaining accurate test documentation throughout project lifecycles.
- Skilled in creating test plans, designing test scenarios, executing test cases, and conducting comprehensive defect reporting and tracking.
- Well-versed in all phases of SDLC and STLC.
- Experienced with Agile methodologies, actively participating in sprint planning, daily stand-ups, backlog grooming, and retrospectives to ensure iterative development and timely delivery.
- Proficient in test management and bug tracking tools, including JIRA, Azure DevOps (ADO), and HP ALM, for defect reporting and resolution.
- Hands-on experience in automating web application testing using Selenium WebDriver with TestNG, Playwright, and AI-assisted frameworks for enhanced efficiency.
- Expert in performance, load, and stress testing with JMeter and LoadRunner to validate scalability and reliability.
- Proficient in testing desktop and mobile applications across multiple platforms and devices for functionality, usability, and compatibility.
- Experienced in designing and developing scalable automation frameworks such as Cucumber BDD, Data-Driven, Hybrid, and Page Object Model (POM) for improved maintainability.
- Proficient in Java, C#, JavaScript, TypeScript, and Python for developing automation scripts and frameworks.
- Experienced in API automation using Rest Assured and Postman, Swagger validating REST and SOAP services for reliability and data integrity.
- Skilled with build and version control tools, including Maven, Git, and Jenkins, ensuring efficient automation and CI/CD integration.
- Hands-on experience testing AI-driven chatbots, validating conversational flows and response accuracy.
- Proficient in configuring and generating test reports using Extent and Allure for comprehensive results visibility.
- Experienced in executing cross-browser and multi-platform test cases on Sauce Labs Cloud.
- Skilled in ETL testing, including data validation, source-to-target mapping, and automating pipelines for reliable data transformation.
- Experienced on Integrated MCP servers with modern automated testing frameworks, enabling real-time test orchestration for transaction-intensive enterprise applications.
- Harnessed AI-assisted logging and reporting features to analyze MCP server logs, enabling faster root cause analysis and actionable insights for both functional and non-functional test failures.
- Strong debugging skills for resolving automation script failures in Selenium and Playwright to ensure robust test execution.
- Collaborated with DevOps teams on automation and build configuration management to streamline deployment and testing processes.
- Experienced in using Azure DevOps and Jenkins to configure CI/CD pipelines, automate builds, and deployment workflows.
- Skilled in setting up and managing cloud infrastructure to support scalable testing and deployment environments.
- Responsible for managing remote Git repositories including Azure Repos, AWS Code Commit, and GitHub, ensuring proper version control, collaboration, and source-controlled Docker configurations.
- Expert in developing reusable Jenkins pipeline scripts, managing Jenkins nodes, orchestrating Docker containers for test execution, and integrating automation frameworks into CI/CD pipelines for continuous testing and deployment.

Technical Skills:

Methodology	Agile Scrum, Waterfall
Automation Tools	Selenium, Playwright, Cypress, Rest Assured, ETL, Tosca, Appium, JMeter, Load Runner, Postman, Swagger, Docker
Frameworks	Data Driven, Keyword Driven, Hybrid, Cucumber BDD, Page Object Model, Spec Flow, JUnit, TestNG, PyTest
Build /Integration Tools	Maven, Gradle, Jenkins, BitBucket
Bug Tracking Tools	JIRA, ADO
Web Service Tool	Rest Assured, SoapUI, Ready API, Rest Client, Post Man
Programming Languages	Java, C#, JavaScript, TypeScript, Python, SQL
Development Environment	IntelliJ, Visual Studio, VS Code, PyCharm, Eclipse
Version Control Tools	GIT, GitHub Actions
Cloud	Azure, AWS, Sauce Lab
Operating Systems	Windows, Linux
Mobile Testing Tools	Appium

Professional Experience:

Client: Fiserv Inc

Project: Pay By Bank/Connect Pay

FEB 2026 – Till Now

Role: Senior SDET

Roles & Responsibilities:

- Collaborated with product owners, business analysts, and stakeholders to gather and analyze requirements for PayByBank payment gateway transactions, translating them into detailed test plans, scenarios, and test cases.
- Led QA automation initiatives for a cloud-native payment platform hosted on Amazon Web Services, defining test strategy, framework architecture, and quality standards across distributed systems.
- Architected and implemented a scalable UI automation framework using Playwright with TypeScript, enabling reliable testing of payment flows, merchant portals, and Clover POS integrations.
- Designed and executed API automation using Karate, validating secure payment transactions, banking integrations, and microservices communication.
- Utilized Postman for API validation, exploratory testing, and debugging of RESTful payment services.
- Performed end-to-end validation of payment gateway workflows, including authorization, capture, settlement, refunds, and failure handling across multiple banking systems and Clover devices for clients like Walmart and Albertsons.
- Extensively worked with Amazon DynamoDB for validating transaction data, ensuring consistency, integrity, and correct persistence of high-volume financial records.
- Monitored application behavior and transaction health using Amazon CloudWatch, analyzing logs, setting alerts, and identifying failures or performance bottlenecks in real-time payment systems.
- Validated event-driven architecture by testing Kafka-based messaging workflows, ensuring reliable processing of payment events and asynchronous communication across services.
- Applied shift-left testing practices, actively engaging in early design discussions, defining acceptance criteria, and initiating UI/API automation during development stages.
- Executed end-to-end testing on Clover POS devices, ensuring seamless integration between hardware, cloud services, and backend payment systems.

- Leveraged advanced Playwright capabilities such as parallel execution, network interception, and robust locator strategies to improve test reliability and reduce flakiness in dynamic cloud-based applications.
- Conducted database validations across DynamoDB and Snowflake, ensuring accurate transaction data flow and reconciliation for financial reporting systems.
- Integrated automation suites GitLab DevOps CI/CD pipelines, enabling continuous testing, headless execution, automated reporting, and faster release cycles.
- Established and enforced CI/CD quality gates, ensuring builds are promoted only after meeting functional, performance, and stability benchmarks.
- Designed and maintained QA dashboards, tracking automation coverage, execution status, defect leakage, and overall release health.
- Monitored and analyzed system performance using CloudWatch metrics and logs, proactively identifying anomalies in payment processing systems.
- Collaborated with cross-functional teams (developers, QA, DevOps, business stakeholders) to ensure high-quality, secure, and scalable payment solutions.
- Actively participated in Agile ceremonies, aligning test automation deliverables with sprint goals and ensuring continuous feedback in iterative development cycles.

Environments: Confluence, AWS, Java, Typescript, Selenium, Playwright, Cucumber, Karate, Git Lab, Appium, Rest Assured, Postman, Swagger, JMeter, MS-SQL, Agile, Tosca, VS Code, GitHub Copilot

Client: UL Solutions, IL
Company: Infosys, USA
Role: Senior SDET

Sept 2025 – Feb 2026

Roles & Responsibilities:

- Collaborated with product owners, business analysts, and stakeholders to gather requirements, analyze and translate them into comprehensive test documentation.
- Led enterprise-scale QA automation as Automation Test Lead, defining ERP test strategy, Playwright-centric reusable framework architecture, governance standards, and coordinating test execution across multiple environments (QA, SIT, UAT, Pre-Prod, Production)
- Architected and implemented a robust ERP automation framework using Playwright with TypeScript, enabling modular, maintainable UI and integration testing for portals, workflows, and role-based business processes.
- Designed and developed scalable test automation frameworks using Node.js with tools such as Playwright / Cypress, following Page Object Model (POM) and modular architecture.
- Integrated Kafka testing with automation frameworks to validate end-to-end processes while maintaining performance and scalability standards
- Leveraged Playwright capabilities along with AI-assisted tools to optimize regression automation through automated test generation, resilient locator strategies, network interception, and reduction of flakiness across complex ERP user interfaces
- Applied ERP domain analytics to identify high-risk business processes, enabling predictive defect analysis and Playwright-based test prioritization, continuously optimizing coverage for mission-critical financial and operational workflows
- Leveraged Dynatrace to monitor application performance, detect anomalies, and optimize system reliability in complex banking and enterprise environments
- Applied a shift-left testing approach by engaging early in requirement discussions, defining acceptance criteria, and initiating API and automation testing during initial development phases.
- Implemented service-level testing for Spring Boot microservices using JUnit / TestNG, including controller, service, and repository layer validation.
- Designed and executed automated test cases for Kafka messaging workflows, ensuring accurate data flow and event processing across distributed systems
- Performed contract testing using Pact / Spring Cloud Contract to ensure backward compatibility between producer and consumer services.
- Integrated Playwright automation suites with Azure DevOps CI/CD pipelines, enabling headless execution, parallel runs, test reporting, and continuous testing for ERP applications and third-party integrations
- Fostered strong cross-functional collaboration with developers, functional consultants, QA, DevOps, and business

teams to ensure end-to-end ERP quality through early Playwright automation feedback and stable multi-module releases

- Executed comprehensive functional, regression, smoke, integration, and end-to-end tests across ERP user interfaces, backend services, and data flows using Playwright automation complemented by targeted manual validation
- Automated UI, API, and end-to-end workflows using JavaScript/TypeScript, validating complex business scenarios across web applications.
- Designed and implemented QA dashboards in Azure DevOps incorporating Playwright test execution results, coverage metrics, defect trends, sprint progress, and overall project health indicators
- Established and governed quality metrics, generated detailed Playwright automation execution reports, enforced CI/CD quality gates, and prevented business process regressions across ERP modules.
- Integrated automated test suits CI pipelines with enforced validation checkpoints, ensuring builds advanced only when functional and stability standards were satisfied.
- Actively participated in Agile ceremonies including sprint planning, backlog grooming, daily standups, risk assessments, and cross-module dependency discussions, aligning Playwright test coverage with iterative delivery goals

Environments: Confluence, Azure, Java, Typescript, Selenium, Playwright, Cucumber, Jenkins, Appium, Rest Assured, Postman, Swagger, JMeter, MS-SQL, AWS, Agile, Tosca, VS Code, GitHub copilot

Client: Regions Bank

Company: CGI

Feb 2021 – Sept 2025

Role: Test Lead

Roles & Responsibilities:

- Partnered with analysts, product owners, developers, and compliance teams on banking, payments, cards, and FSC projects, ensuring clear requirements and supporting Selenium UI and API automation planning.
- Analyzed business and technical requirements for core banking, payments, cards, lending, and Salesforce FSC, translating them into Selenium- and Cypress-ready automation scenarios in regulated financial environments.
- Led test planning by designing banking test strategies for payments, cards, core banking, and Salesforce workflows with automation coverage using Selenium and Cypress.
- Designed and governed scalable UI, API, and backend automation frameworks for banking applications using Selenium, Cypress, Cucumber, REST Assured, and Salesforce tools.
- Validated end-to-end financial transaction flows including debit/credit cards, ACH, wire transfers, reversals, refunds, settlements, and ledger postings using Selenium- and Cypress-based UI automation, ensuring accuracy, security, and regulatory compliance
- Led functional and regression automation efforts using Selenium WebDriver and Cypress, integrating Cucumber BDD and data-driven frameworks to validate digital banking portals and Salesforce customer interaction platforms
- Prepared, managed, and governed test data for multiple financial instruments (cards, ACH, wire, loans), supporting Selenium and Cypress automation execution while maintaining compliant datasets for ETL processes and Salesforce validations
- Implemented shift-left testing by actively participating in requirement reviews, defining acceptance criteria, and initiating API and automation testing early in the development lifecycle.
- Enabled test observability by capturing execution metrics, logs, and failure trends to improve defect diagnosis and reduce flaky tests.
- Leveraged AI-assisted tooling such as GitHub Copilot to accelerate Selenium and Cypress test development, improve Salesforce automation code quality, detect flaky tests, and enable resilient locator strategies
- Managed defect lifecycle in JIRA and Azure DevOps, coordinating with development and Salesforce teams to resolve automation defects.
- Designed and delivered Python Playwright automation frameworks, integrating Selenium and Cypress with hybrid, keyword-, and data-driven strategies for end-to-end banking and Salesforce testing.
- Designed enterprise-scale performance test strategies for banking and Salesforce applications using JMeter and LoadRunner, complementing UI load insights gathered from Selenium- and Cypress-based regression suites
- Analyzed performance results to identify infrastructure and application bottlenecks across CPU, memory, disk I/O, and network layers, correlating findings with Selenium and Cypress test observations in cloud and on-prem

banking platforms

- Configured JMeter to emulate high-concurrency financial transactions, monitored key KPIs such as latency and throughput, and validated end-to-end flows verified through Selenium and Cypress UI automation

Environments: Playwright, Selenium WebDriver, Cucumber, Jenkins, Appium, Rest Assured, Postman, JMeter, SQL, AWS, Agile, TOSCA, Eclipse, GIT, Maven, AWS, CloudWatch, S3, EC2, Lambda

Company: Delta Technologies

Sept 2018 – Feb 2021

Role: Software Test Engineer

Roles & Responsibilities:

- Collaborated closely with cross-functional retail business teams, store operations, project managers, and QA leads to gather requirements and inputs for Point of Sale and retail application automation initiatives
- Gathered comprehensive functional and non-functional requirements from retail stakeholders, ensuring POS billing, returns, exchanges, promotions, taxation, and payment workflows are accurately reflected in test cases
- Developed and maintained scalable UI automation frameworks using Java for testing POS interfaces, retail web applications, and store management systems
- Upgraded existing automation frameworks to Java 1.8, leveraging new language features to improve performance, reliability, and compatibility with enterprise retail POS technology stacks
- Prepared and managed retail-specific test data for various POS scenarios, including multiple tenders, tax rules, promotions, discounts, and store configurations based on business requirements
- Participated in functional, GUI, regression, and ad-hoc testing phases covering POS checkout flows, register operations, store processes, and customer-facing retail applications
- Automated test scenarios using BDD frameworks with Eclipse IDE, Gherkin, Cucumber, Selenium, Appium for mobile and handheld POS devices, Bitbucket for version control, and Jenkins for CI/CD pipelines
- Executed API testing through automation of RESTful services and manual validation using Postman, Swagger, supporting POS sales, returns, voids, refunds, orders, and payment gateway services
- Authored and maintained detailed test scenarios, scenario outlines, and test plans in HP ALM, ensuring comprehensive coverage of Point of Sale and retail store systems
- Created, maintained, and executed build validation and environment cleanup scripts, tracked defects and managed backlog in JIRA, supporting Agile retail delivery cycles
- Actively participated in daily Scrum meetings with development and product teams, reviewed sprint backlogs, analyzed acceptance criteria, and contributed POS-centric user stories
- Reviewed and validated database test cases according to retail requirements, using complex SQL queries to verify POS transactions, inventory updates, pricing accuracy, tax calculations, and sales reports in SQL Server
- Performed cross-browser and device compatibility testing across Edge, Firefox, Chrome, and POS terminals/devices using Sauce Labs to ensure a consistent and reliable store checkout experience

Company: Vertiv Software Labs Pvt Ltd

Dec 2017 – Jul 2018

Role: Automation Test Engineer

Roles & Responsibilities:

- Analyzed business and functional requirements to derive comprehensive test cases ensuring complete coverage for new feature implementations
- Actively participated in sprint planning sessions and daily Scrum meetings to align testing efforts with development timelines
- Prepared detailed test plans and provided accurate time estimations for all sprint tasks and release cycles to support project planning
- Developed and executed test cases systematically, ensuring thorough validation of application functionality and business requirements
- Conducted integration testing, deployment validation, and critical hotfix testing to ensure system stability across environments
- Architected UI test automation frameworks using Selenium WebDriver and Java to enable scalable and maintainable test automation
- Implemented robust database connectivity framework in Java to dynamically fetch test data from multiple database sources
- Developed comprehensive API automation frameworks using Java, REST Assured for REST APIs, and SOAP

protocol testing capabilities

- Developed automation test scripts and maintained version control through systematic Git repository commits
- Created automation scripts for each sprint deliverable leveraging established framework architecture and coding standards
- Integrated test automation suite with Jenkins CI/CD pipelines, configured pipeline projects, and generated comprehensive test execution reports
- Participated in Scrum ceremonies and technical discussions regarding defect triage, status updates, and sprint retrospectives
- Committed automation test code to appropriate Git repositories and maintained code quality through regular updates
- Successfully completed and obtained sign-off on all QA deliverables within sprint timelines, ensuring release readiness
- Collected and analyzed automation regression test reports, proactively identified failures, and resolved issues to maintain test suite stability
- Delivered sprint commitments consistently, ensuring zero-defect production deployments across all release cycles

Company: People Tech Group

May 2016 – Nov 2017

Role: Software Engineer

Roles & Responsibilities:

- Designed high-level test scenarios and comprehensive test strategies aligned with business requirements and functional specifications
- Authored detailed test plans, test cases, and manual test scripts to ensure maximum test coverage across all assigned initiatives and project deliverables
- Executed test cases systematically and maintained detailed test execution records and results for traceability and audit purposes
- Performed comprehensive testing including functional, regression, retesting, compatibility, database validation, and server log analysis to ensure application quality
- Identified, recorded, and tracked defects through complete lifecycle using JIRA, ensuring timely resolution and verification
- Performed integration testing, deployment validation, production testing, and critical hotfix verification to maintain system stability
- Manually validated application execution results and captured SQL statements for performance analysis and data verification
- Performed thorough API testing utilizing REST protocols and Postman for functional validation and service reliability
- Created and maintained comprehensive API test case repository covering positive, negative, and edge case scenarios
- Developed and maintained robust automated test suites using Selenium WebDriver with Java and JUnit framework for continuous regression testing
- Prepared comprehensive test data sets by executing complex SQL queries against multiple database environments
- Engineered automation test scripts using Selenium WebDriver and managed version control through Git repository commits
- Created reusable automation scripts for every sprint deliverable utilizing established framework standards and best practices
- Documented and tracked defects in Bugzilla defect tracking system, ensuring proper categorization, priority assignment, and resolution tracking
- Executed complex SQL queries to validate data transactions, verify data integrity, and ensure accurate data flow across system components

Education: Bachelor's in technology, Graduated, JNTUK University, 2015
