Chicago, IL (open for relocation)

SUMMARY

SDET / Senior QA Automation Engineer with 6 years of experience testing web, mobile, API, and database-driven applications. Experienced with Java, JavaScript, TypeScript, Python, Selenium, Playwright, Appium, TestNG, Cucumber, REST Assured, Postman, and SQL. Strong background in UI, API, mobile, and end-to-end automation, with hands-on experience using Maven, Jenkins, Git, GitHub, Docker, Jira, and CI/CD. Focused on building reliable automation frameworks, improving test coverage, and delivering high-quality software in Agile environments.

TECHNICAL SKILLS

Java | JavaScript | Python | SQL | HTML | JSON | XML | Selenium WebDriver | Playwright | Appium | TestNG | JUnit | Cucumber (BDD) | Rest Assured | Postman | REST | SOAP | Swagger | PostgreSQL | JDBC | Maven | Jenkins | Git | GitHub | Linux | Android Studio | IntelliJ IDEA | Jira | Confluence | Allure Reports | Extent Reports | Log4j | Manual Testing | Automation Testing | Regression Testing | Smoke Testing | Integration Testing | End-to-End Testing | Functional Testing | UI Testing | API Testing | Mobile Testing | Android/iOS Testing | Black-box Testing |

Allstate

QA Automation Engineer

Feb 2023 – Present

- Automated end-to-end regression scenarios for policy overview, coverage details, endorsements, document downloads, and renewals using Selenium WebDriver, Java, TestNG, Maven, and Jenkins.
- Improved high-priority regression coverage and reduced manual testing effort by ~45%, helping the team release insurance platform updates with higher confidence.
- Implemented RestAssured API tests to validate policy updates, premium recalculation, and renewal workflows before production release.
- Used SQL and JDBC to verify backend data accuracy for policy status, coverage limits, effective dates, and premium information.
- Integrated automated suites into Jenkins CI/CD pipelines with reporting, reducing regression feedback time by ~40% and supporting faster release decisions.

Vivid Seats

Software Quality Engineer

Jul 2020 – Dec 2022

- Built and maintained end-to-end UI automation for event search, seat selection, cart, checkout, and order confirmation using Selenium WebDriver, Java, TestNG, Maven, and Jenkins.
- Increased regression automation coverage by ~50% across core ticketing workflows, reducing repetitive manual validation before releases.
- Developed RestAssured API automation with POJOs to validate seat reservation, pricing, and order creation services.
- Performed SQL and JDBC database validation to ensure data consistency across UI, API, and database layers for order and pricing workflows.
- Improved framework stability through Page Object Model, reusable utilities, and Jenkins execution, reducing flaky test failures by ~25% and supporting frequent releases.

Education

Anhui University of Technology

Bachelor's degree in Software Engineering

Certification

Certified Tester Foundation Level (ISTQB)
