

SWATI ROY

QA & Data Quality Lead

swatiroy2009@gmail.com | (667) 200-9899 | linkedin.com/in/swatiroy89 | Maryland, USA

PROFESSIONAL SUMMARY

QA and Data Quality Lead with 12+ years leading cross-functional Agile/SAFe teams, UAT coordination, and enterprise test strategy for cloud-based data platforms. Deep expertise validating ETL/ELT pipelines and enforcing data quality controls across Bronze, Silver, and Gold layers using Azure Databricks, Spark, SQL, Python, and CI/CD. Proven record across Banking, Financial Services, Healthcare, Insurance, Fintech, and SAP BRIM, driving enterprise-scale data modernization, cloud migration, and digital transformation with strong stakeholder management and QA mentorship.

CORE SKILLS

Programming & Query	Java, Python, JavaScript, SQL, PySpark, Oracle
Automation Frameworks	Selenium, Playwright, Tosca, TestNG, JUnit, Cucumber, POM, Data-Driven & Hybrid Frameworks, Pytest
Web & API Testing	Postman, REST Assured, SOAPUI, JMeter, Swagger, JSON, XML, XPath
CI/CD & Version Control	Jenkins, Git, GitHub, GitLab, Docker
Test & Data Quality Tools	JIRA, HP ALM, TestRail, Rally, ServiceNow, ADO, qTest, Confluence, Great Expectations, Informatica, Talend, QuerySurge
Cloud & Data Platforms	Azure, AWS, GCP, IBM, Databricks, Delta Lake, Snowflake

KEY ACHIEVEMENTS

- Reduced overall testing time by 40% and improved test coverage by implementing automation frameworks across multiple projects.
- Delivered high-stakes projects within tight deadlines, achieving zero post-release defects and positive stakeholder feedback.
- Decreased post-release defects by 30% by establishing a robust CI/CD pipeline with Jenkins for early issue detection.
- Improved system responsiveness by 20% under peak load by resolving critical performance bottlenecks using JMeter; received Infosys Insta Award for outstanding QA performance.

CERTIFICATIONS

Parasoft SOA & Parasoft Essentials (2022) • ConformIQ (2022-2024) • Green Belt MBT Testing (2022) • Agile & DevOps • Scrum Master & Product Owner • Performance Testing & JMeter • API Management • CI/CD Best Practices in Automated Testing • Git & GitHub • Jenkins Introduction • Software Testing Foundation 2018 • Introduction to RabbitMQ • Programming Fundamentals OOPS • Tosca Product Consultant • AS1, AS2, TD1, TD2 • Testim AI Certified • AMCAT Certified Data Processing Specialist • AMCAT Certified Software Development Trainee

PROFESSIONAL EXPERIENCE

QE Engineering Quality Lead cum SM cum Product Owner

ABS Tech LLC – Morgan Stanley (Northstar Portal) | Oct 2023 – Present

- Developed and executed product quality strategies and risk-based test strategies for business-critical applications, leading end-to-end black-box, functional, integration, regression, and API testing across distributed in-house and offshore QA teams; established scalable QA processes, identified quality gaps, and improved release readiness and product reliability.
- Partnered with engineering, infrastructure, product, and cross-functional stakeholders to drive automation and quality engineering initiatives, leveraging Selenium, Playwright, Tosca, Python, Pytest, SQL, and API automation to prevent regressions, improve test effectiveness, and establish quality metrics/KPIs for test coverage, defect trends, automation efficiency, and overall product quality.
- Leveraged AI-assisted testing and workflow optimization through prompt/context engineering and AI tools to accelerate test design, requirements analysis, defect triage, and automation; navigated ambiguous requirements by defining scope and priorities, while applying responsible AI practices including risk assessment, human validation, quality/accuracy reviews, and bias-aware evaluation to deliver measurable improvements in testing efficiency and product quality.
- Led Data Quality and Data Governance initiatives across enterprise data domains, partnering with business, technology, and compliance teams to ensure integrity, availability, and consistency of critical data for analytics and reporting.
- Defined and maintained Critical Data Elements (CDEs), business rules, and metadata standards, establishing automated data quality metrics for completeness, accuracy, consistency, validity, timeliness, and uniqueness.
- Designed and implemented automated Data Quality Frameworks using Great Expectations, PySpark, SQL, and Tosca DI for continuous monitoring and governance compliance across ETL/ELT pipelines.
- Performed advanced SQL-based data analysis, reconciliation, and root cause analysis across Oracle, SQL Server, Snowflake, and Delta Lake to support complex data transformation initiatives.
- Partnered with Data Governance and Compliance teams on policy, lineage, and stewardship processes, improving regulatory reporting accuracy and audit readiness.
- Prepared executive dashboards, KPI reports, and strategic roadmaps for senior leadership on data quality trends, governance initiatives, and delivery milestones.

Sr QA Consultant

CGI – CIBC & Wells Fargo | Dec 2021 – Mar 2023

- Designed test plans for user stories and maintained them on Confluence; managed business analysis and test-script documentation across the release cycle.

- Conducted requirements analysis, grouped needs into stories under epics, created acceptance criteria, and led refinement sessions with Product Owners to establish priorities.
- Collaborated with development teams to prioritize and resolve production support issues, assessing the risk and impact of proposed fixes before implementation.
- Tracked client requirements from inception through delivery, recorded meeting minutes and key decisions, and maintained open communication with client SMEs and stakeholders.
- Wrote SQL queries to validate source-to-target data in migration projects and worked with Joiner, Expression, Lookup, Aggregate, Filter, and Stored Procedure transformations.
- Automated test cases using ConformIQ and a C#-based framework with Jenkins; conducted end-to-end integration testing of AWS data workflows using Tosca and validated integrations across AWS services.

Sr Test Analyst

Infosys – BRIT Insurance & KI Insurance | Mar 2021 – Dec 2021

- Executed full STLC across analysis, design, development, and testing for a BDD-based automation framework within an Agile SDLC environment.
- Performed White Box, Black Box, Acceptance, Smoke, Sanity, Performance, Ad-hoc, and Regression testing across manual mobile testing efforts spanning multiple app versions.
- Conducted L10N/I18N testing and AI/chatbot testing, applying structured inspection techniques to validate application behavior and stability.
- Wrote and maintained detailed test cases and test scenarios, and prepared test plans and case documentation using SQL queries based on mapping documents.
- Performed change-log verification, video/audio streaming testing, and web services/API testing using Postman.
- Participated in defect triage calls, documented hotfixes, and tested VoIP and video applications for network reliability across devices and platforms.

Sr. QA Engineer

QA Infotech – Axis.ai, Shopify (Inova Health Patient Portal) | Jan 2020 – Mar 2021

- Planned, wrote, and executed functional, regression, and end-to-end test cases for web and mobile applications across browsers and devices.
- Owned backend, frontend, and UI testing, running test cases through the pytest framework to validate application behavior.
- Partnered with cross-functional teams to ensure quality was maintained throughout the software development life cycle.
- Analyzed penetration-testing results to assess application vulnerability, covering wireless attacks, reverse engineering, information gathering, and sniffing.

QA Engineer

ITMC – Dept of Fire, Fortis | Oct 2018 – Jan 2020

- Developed comprehensive test case plans to ensure thorough coverage across diverse platforms, including Pega, B2B, and Salesforce, validating order-services environments.
- Created and maintained automated test scripts using Selenium, significantly reducing manual testing effort and improving overall testing efficiency.
- Worked closely with the Business Analyst team to clarify requirements, address issues, and ensure alignment on product releases and defect resolutions.

QA Engineer – BYKR (eCommerce)

Mar 2015 – Jan 2016

- Identified, fixed, and documented system bugs and errors, ensuring the Application Under Test met organizational and industry quality standards.
- Validated business requirements and functional design documents, interacted with developers to follow up on defects, and retested UAT after each code release.

Jr. QA Engineer – Dalahub

Oct 2014 – Feb 2015

- Wrote technical reports and Requirement Traceability Matrices (RTMs) with findings and recommendations, and documented all testing processes and procedures.
- Maintained version control of test objects and QA environments; performed data cleansing/scrubbing on flat CSV files and executed data masking and subsetting rules.

Programmer Analyst – Cognizant

May 2014 – Sept 2014

- Performed requirement and monitoring analysis, product reporting, and analytics using SSRS and SSAS; wrote SQL Server queries to support deployment and reporting.
- Analyzed data warehouse data using Tableau, QlikView, and Weka, delivering stakeholder reports that improved product efficiency by 40%.
- Performed GUI, Functional, Positive/Negative, and Regression testing, and developed RTM and Test Summary Report (TSR) documentation.
