

VASANTH

QA Automation Engineer | Manual & Selenium-Java Testing

WI, USA | (414) 808-8079 | vasanthakki07@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMAR

Detail-oriented QA Engineer with 6+ years of experience in Manual and Automation Testing across web, API, and database layers. Proven expertise designing and maintaining Selenium WebDriver frameworks with Java, TestNG, Cucumber (BDD), and Maven in Agile/Scrum environments. Skilled in building CI/CD-integrated automation suites (Jenkins, GitHub Actions), API testing (Rest Assured, Postman), and SQL-based backend validation. Strong background in full SDLC/STLC, test planning, defect management, and cross-functional collaboration with developers, product owners, and business stakeholders to deliver high-quality, scalable software.

TECHNICAL SKILLS

Test Automation: Selenium WebDriver 4.x, Selenium Grid, Appium (mobile), Playwright (exposure), Rest Assured, Cucumber (BDD), TestNG, JUnit 5

Programming / SDET: Java 8-17 (Core & OOP), Collections, Streams & Lambdas, Exception Handling, Multithreading basics, Python (scripting), JavaScript (basic)

Frameworks & Design Patterns: Page Object Model (POM), Page Factory, Hybrid/Data-Driven Framework, Keyword-Driven Framework, Singleton, Factory, Builder patterns

Build & Dependency Tools: Maven, Gradle, Apache Ant

CI/CD & DevOps: Jenkins (declarative/scripted pipelines), GitLab CI, Azure DevOps Pipelines, Docker, Kubernetes (basic), AWS (EC2, S3), GitHub Actions

API Testing: Rest Assured, Postman/Newman, SoapUI, Swagger/OpenAPI, JSON/XML validation, GraphQL (basic)

Database & Backend Testing: SQL (complex joins, stored procs), MySQL, Oracle, PostgreSQL, MongoDB (NoSQL), Query optimization for test data validation

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, Branching/Merge strategies, Code Reviews

Test Management & Defect Tracking: JIRA, Zephyr, TestRail, ALM/Quality Center, Azure Test Plans, Xray

Manual Testing Methodologies: Functional, Regression, Smoke, Sanity, Integration, System, UAT, Exploratory, Ad-hoc, Cross-browser, Compatibility, Accessibility (WCAG basics)

Performance & Security Testing: JMeter (load/stress testing), Basic OWASP ZAP scans, Performance baseline analysis

Methodologies & Practices: Agile/Scrum, Kanban, Waterfall, SDLC, STLC, Test Case Design (Boundary Value, Equivalence Partitioning), Risk-Based Testing, Shift-Left Testing

Reporting & Logging: Extent Reports, Allure Reports, Log4j2, SLF4J

Operating Systems / Tools: Windows, Linux/Unix (shell scripting basics), IntelliJ IDEA, Eclipse, VS Code, Postman.

PROFESSIONAL EXPERIENCE

Software-QA Automation Engineer — Docusign-(USA) *May 2023 – Present*

- Lead a hybrid QA team of 4, designing and maintaining a Selenium WebDriver + Java + TestNG automation framework following the Page Object Model, reducing regression cycle time from 5 days to 1 day.
- Built and maintained a BDD framework using Cucumber and Gherkin, enabling business analysts to author acceptance criteria and increasing test transparency across teams.
- Automated REST API test suites using Rest Assured and Postman/Newman, validating JSON schemas, status codes, and end-to-end business workflows for 40+ microservices.
- Integrated automated test suites into Jenkins CI/CD pipelines with parallel execution via Selenium Grid and Docker containers, cutting pipeline execution time by 60%.

- Implemented data-driven testing using Apache POI and JSON test data files, improving test coverage across 15+ browser/OS combinations.
- Wrote complex SQL queries (joins, subqueries, stored procedures) against Oracle and PostgreSQL to validate backend data integrity and ETL pipelines.
- Mentored 3 junior SDETs on Java fundamentals, Git workflows, and automation best practices; conducted code reviews via GitHub pull requests.
- Partnered with Product and DevOps in Agile/Scrum ceremonies (sprint planning, standups, retros) to define acceptance criteria and reduce production defects by 35%.

Software-QA Automation Engineer — UnitedHealth Group (USA) *Jun 2018 – Dec 2021*

- Designed and implemented a Selenium + Java automation framework from scratch using TestNG, Maven, and Log4j2, achieving 80% automated regression coverage within 6 months.
- Executed manual functional, regression, smoke, and UAT testing for HIPAA-compliant healthcare web applications across 5 major releases per year.
- Automated cross-browser test execution (Chrome, Firefox, Edge, Safari) using Selenium Grid, reducing manual cross-browser verification effort by 70%.
- Created and executed detailed test cases, test plans, and traceability matrices in JIRA/Zephyr, ensuring 100% requirement coverage.
- Performed API testing with SoapUI and Postman for SOAP/REST services handling patient data, verifying HL7/FHIR data formats.
- Collaborated with developers using Git/GitHub for version control and participated in daily Agile standups within a Scrum team of 10.
- Logged, triaged, and tracked defects in JIRA, working directly with developers to reproduce and resolve issues, improving defect resolution time by 25%.
- Performed manual testing (functional, regression, smoke, sanity, exploratory) for a high-traffic e-commerce web platform serving 2M+ monthly users.
- Began automation journey by building Selenium WebDriver scripts in Java to automate high-priority regression scenarios, cutting manual test time by 30%.
- Authored test cases, test scenarios, and bug reports in TestRail and JIRA, maintaining clear traceability between requirements and test coverage.
- Conducted database validation using SQL queries in MySQL to verify order processing, inventory, and payment transaction data.
- Participated in Agile ceremonies including sprint planning, backlog grooming, and retrospectives with cross-functional teams.
- Assisted in setting up a basic Jenkins job to trigger automated smoke tests on each building deployment.
- Writing and debugging Java/Python code, understanding RESTful API design, basic front-end (HTML/CSS/JS) for UI validation, containerization with Docker, cloud fundamentals (AWS EC2/S3), relational & NoSQL database design, Git-based collaborative workflows, code review practices, and Agile software development principles (Scrum/Kanban, sprint-based delivery, CI/CD pipelines).

EDUCATION:

- **PhD** in Information Technology Emphasis in Artificial Intelligence-University of Cumberland - GPA: 3.9
- **Master of Science** in Computer Science- University of Wisconsin Milwaukee. -05/2023, GPA: 3.5.
- **Master of Technology (M. Tech)** in Electronics Communication. -JNTU-GPA: 3.5
- **Bachelor of Technology (B. Tech)** in Electrical & Electronics Engineering-JNTU-GPA: 3.5

CERTIFICATIONS

- ISTQB Certified Tester – Foundation Level (CTFL), AWS Certified Cloud Practitioner (CLF-02).
- Python for everybody -IBM. Database and SQL for beginners (Udemy).
- Microsoft Certified: Azure AI Fundamentals (AI-900), Azure Data Fundamentals (DP-900)
Designing Microsoft Azure Infrastructure Solutions (DP-305).
