Long Beach, CA (Open to relocate) | 5626463151 | Vinaydommatta.1@gmail.com | [LinkedIn](#)

SUMMARY

Security Analyst with 4+ years of experience in security operations, incident response, threat detection, IAM, vulnerability management, and cloud security across healthcare, cloud, and SaaS environments. Hands-on experience with Splunk, Microsoft Sentinel, CrowdStrike, Microsoft Defender for Endpoint, Entra ID, Okta, Nessus, Qualys, AWS, and Azure. Skilled in investigating phishing, malware, authentication threats, endpoint anomalies, and account compromise using SIEM, EDR, threat intelligence, and MITRE ATT&CK. Experienced in implementing RBAC, MFA, Conditional Access, SSO, and least-privilege access, along with vulnerability assessment and remediation using CVE/CVSS analysis. Proficient in Python, PowerShell, Bash, SQL, and KQL for security automation and analysis, with knowledge of NIST CSF, NIST SP 800-53, ISO 27001, SOC 2, and HIPAA.

TECHNICAL SKILLS

Security Operations: SIEM (Splunk, Microsoft Sentinel), EDR (CrowdStrike, Microsoft Defender for Endpoint), log correlation, alert triage, phishing and malware investigation, incident response, MITRE ATT&CK, threat intelligence

Cloud Security: AWS (IAM, CloudTrail, Config, GuardDuty, Security Hub, KMS, S3, VPC security groups), Azure (Microsoft Entra ID, Defender for Cloud), cloud security posture review, least-privilege policy design

Identity & Access Management: Microsoft Entra ID / Azure AD, Okta, SSO, SAML, OAuth 2.0, MFA enforcement, RBAC design, joiner-mover-leaver provisioning, periodic user access reviews

Vulnerability & Application Security: Nessus, Qualys, Burp Suite, OWASP ZAP, OWASP Top 10, CVE and CVSS triage, patch and remediation coordination, secure configuration baselines

Frameworks, Scripting & Tools: NIST CSF, NIST SP 800-53, ISO 27001, SOC 2, Python, PowerShell, Bash, SQL, Wireshark, Linux, Windows Server, ServiceNow, Jira, Confluence, Git, Docker

PROFESSIONAL EXPERIENCE

Humana

Jul 2026 – Present

Security Analyst

- Spearheaded the Healthcare Security Monitoring & Incident Response project, protecting PHI/PII by correlating events across Microsoft Sentinel, Defender for Endpoint, Entra ID, and Azure, improving alert triage time by 32%.
- Investigated phishing, authentication threats, malware, endpoint anomalies, and account compromise using KQL, EDR, threat intelligence, MITRE ATT&CK, and incident response playbooks, reducing incidents by 24%.
- Strengthened identity security through RBAC, MFA, Conditional Access, SSO, and joiner-mover-leaver workflows, partnering with IAM teams to enforce least-privilege access across healthcare systems.
- Conducted vulnerability and security posture assessments using Qualys, Microsoft Defender for Cloud, CVE/CVSS analysis, and secure configuration baselines, improving critical vulnerability remediation within SLA by 28%.
- Automated security operations and compliance reporting using PowerShell, Python, KQL, and ServiceNow, supporting incident documentation, access reviews, and controls aligned with NIST CSF, NIST SP 800-53, HIPAA, and SOC 2.

VMware

Jul 2020 – Jul 2024

Security Analyst

- Handled Tier 1 and Tier 2 alert triage for VMware's cloud and SaaS platform in Splunk, cutting false positive alert volume by 30% by tuning correlation rules, suppression logic, and thresholds against known benign administrative activity.
- Ran incident response end to end for confirmed security events across containment, eradication, recovery, and post-incident review, reconstructing attack timelines from Windows Server, Linux, firewall, and authentication logs.
- Investigated reported phishing campaigns by analyzing email headers, attachments, and embedded URLs, extracting indicators of compromise, and pushing block actions along with targeted user awareness follow-ups.
- Administered identity and access controls in Microsoft Entra ID and Okta, configuring SSO, SAML, and OAuth 2.0 integrations, enforcing MFA policies, and supporting joiner-mover-leaver provisioning for engineering and corporate users.
- Led quarterly user access reviews across production and internal systems, removing 25% of standing privileged entitlements by redesigning RBAC role definitions and replacing broad group memberships with least-privilege assignments.
- Managed vulnerability scanning cycles with Nessus and Qualys across servers, workstations, and Docker container images, prioritizing CVEs by CVSS score and asset exposure and tracking remediation SLAs in Jira and ServiceNow.
- Tested internal web applications against the OWASP Top 10 using Burp Suite and OWASP ZAP, reporting broken access control, injection, and insecure configuration issues with reproduction steps and practical fix guidance for developers.
- Automated repetitive triage and reporting work with Python, PowerShell, Bash, and SQL, and maintained runbooks, control evidence, and process documentation in Confluence and Git to support SOC 2 and ISO 27001 audits.

PROJECTS

Purple Team Attack Simulation and Detection Engineering Lab | Splunk, Sysmon, Atomic Red Team, MITRE ATT&CK, Linux

- Built an isolated lab of Windows Server and Linux hosts forwarding Sysmon, PowerShell, and syslog telemetry into a Splunk indexer for centralized analysis.
- Executed Atomic Red Team tests for credential access, persistence, privilege escalation, and lateral movement mapped to MITRE ATT&CK.
- Wrote and tuned Splunk correlation searches for each technique and documented detection coverage gaps in an ATT&CK heat map.

Network Traffic Forensics and Malware Communication Analysis | Wireshark, tcpdump, Python, Linux

- Captured and dissected packet traces with Wireshark and tcpdump to trace command-and-control beaconing, DNS tunneling, and data exfiltration patterns.
- Built Python scripts to parse PCAP files and extract indicators of compromise like domains, IP addresses, user agents, and file hashes.
- Produced an analyst report with an IOC list, traffic characteristics, and recommended blocking and detection actions for a SOC team.

EDUCATION

Master of Science in Cyber Security

California State University, Dominguez Hills, CA | GPA: 3.6

Aug 2024 – May 2026
