SUMMARY

Business Analytics graduate with hands-on experience using SQL, Python, Tableau, and SAS to support business and strategic decision-making. Proven ability to analyze large, messy datasets, identify actionable insights, and communicate findings clearly to non-technical stakeholders through reports and dashboards. Experience spans marketing analytics, pricing analysis, reporting, and predictive modeling across real-world datasets.

EDUCATION

Master of Science in Business Analytics

University of Central Oklahoma

December 2025

Edmond, Oklahoma

EXPERIENCE

Data Analyst

October 2023 – May 2024

Vanessa Napkins

India

- Used SQL to analyse customer purchase data and identify repeat-purchase patterns and high-value customer segments.
- Compared purchase frequency and order value across segments to support more targeted marketing decisions. Used Excel summaries to validate results and communicate findings to non-technical stakeholders
- Built Tableau dashboards tracking competitor pricing, product categories, and campaign performance over time.

Reporting Intern

August 2021 – September 2021

Conscript

India

- Generated comprehensive reports and provided data-driven insights to support strategic HR decision-making.
- Data integrity and Accuracy ensured by compiling, reviewing, and refining reports for organizational use.
- Summarized findings in clear reports and presentations to support internal planning and decision-making.

UNIVERSITY PROJECTS

Predicting Fire Incidents and Reduction of False Alarms- London Fire Brigade Data

- Cleaned and analyzed 300K+ fire incident records using SAS Viya and Python, addressing class imbalance and noisy features.
- Engineered features and compared regression and ensemble models, prioritizing interpretability alongside achieving 80% accuracy.
- Identified patterns associated with false alarms to support insights into risk reduction and resource planning.

Power Outage Prediction Using Machine Learning Algorithms in Oklahoma

- Forecasted county-level power outages on 168K+ records using SAS Enterprise Miner; handling missing data and class imbalance.
- Engineered 40+ features from weather and infrastructure variables and evaluated multiple ML models, achieving models with 72% accuracy.
- Assessed model performance to understand tradeoffs relevant to outage preparedness and planning.

SKILLS

Analytics & BI: SQL, Advanced Excel (PivotTables, Lookups), Tableau, Power BI

Programming & Modeling: Python, R, SAS (Viya, Enterprise Miner), SPSS

Data & Tools: Alteryx, MongoDB, Relational Databases, Data Cleaning & Validation

Business Areas: Marketing Analytics, Pricing Analysis, Reporting, Forecasting

CERTIFICATIONS AND BADGES

SAS Certified Specialist Machine Learning using SAS Viya

SAS Certified Predictive Modeler Using SAS Enterprise Miner 14

Alteryx Designer Core Certification

SQL for Analytics

Modern Database Design Essentials

Intro to MongoDB
