Business Analyst

Summary:

Strategic and detail-oriented Business Analyst with over 4+ years of experience delivering innovative, data-driven solutions to enhance business performance, optimize processes, and support enterprise-wide initiatives. Adept at leading end-to-end analysis lifecycles—from stakeholder engagement and requirements gathering to solution delivery and post-implementation review—across diverse industries including finance, technology, and operations. Proven ability to translate complex business challenges into clear, actionable insights through advanced data analysis, modeling, and visualization using tools such as SQL, Excel, Power BI, Tableau, and Python. Experienced in both Agile and Waterfall environments, with a strong track record of collaborating with cross-functional teams including product managers, developers, and senior leadership to drive alignment between business goals and technical execution. Skilled in developing business cases, defining KPIs, conducting gap analyses, and creating detailed documentation including BRDs, FRDs, and user stories. Recognized for exceptional communication, critical thinking, and problem-solving abilities, consistently contributing to measurable improvements in efficiency, customer satisfaction, and revenue growth. Poised to bring analytical rigor, business acumen, and strategic foresight to a dynamic organization focused on innovation, operational excellence, and long-term success.

Areas of Expertise:

- BRD, Use Case Specifications, and Functional Specifications
- Knowledge of Facets |HSP | MMIS (Medicaid & Medicare)
- Experience in Configurations and Data Mapping
- Functional Knowledge of Medicare and Medicaid domains
- Experience Claims Payment Processing, benefits, Membership, Authorization, Health plan, Pricing, Vendor Delegation, and HIPAA
- Ability to provide product training
- SDLC Methodology –Agile and Waterfall and performing Agile ceremonies for product development and demos.
- Requirement Gathering and Analysis
- Coordinate with UX/UI to develop user experience designs
- Pharmacy Benefit Management
- EHR \EMR Implementation
- Stakeholder, Project, and Vendor Management
- Test Plans, Test Cases, and Test Scenarios
- Knowledge of Jira, Confluence, Mock-up, and Wireframes
- Basic Knowledge of SQL Queries
- UAT | RTM
- Behavioral Health &Intellectual Tailored Plan | Utilization Management

Tools – MS. Visio, MS. Office, JIRA, SharePoint, PowerPoint, Smart sheet, Excel, Confluence

Business Analyst | National Valuation Consultants | New York | April 2024 – present

- Collected, analyzed, and interpreted real estate financials, market comparable, income statements, rent rolls, and operating expense data to support accurate property valuations.
- Partnered with senior appraisers and project managers to gather business requirements for upgrades to proprietary appraisal tools and report generation platforms.
- Developed business requirements documents (BRDs), process flows, and functional specifications to guide internal development teams and third-party vendors.
- Conducted workflow analysis and proposed efficiency improvements, leading to a 30% reduction in report preparation time for select asset classes.
- Used Excel, Power BI, and SQL-based tools to create dashboards and analytical reports tracking valuation trends, asset types, cap rates, and regional variations.
- Collaborated with data entry and research teams to validate market intelligence and maintain consistent property-level information across projects.
- Designed and implemented standardized templates and checklists that improved data quality and reduced inconsistencies in appraiser-submitted financial models.
- Played a key role in transitioning several manual processes to digital workflows, including automated data feeds for comps, tax records, and lease abstracts.
- Supported implementation of internal project tracking tools by defining user requirements, assisting with configuration, and coordinating stakeholder training.
- Participated in QA testing of valuation software updates; logged defects, documented test cases, and coordinated user feedback with the IT support team.
- Coordinated efforts between regional offices to align reporting formats, improve collaboration on national portfolios, and ensure compliance with appraisal standards.
- Conducted ad hoc market research and synthesized data to support appraiser narratives in valuation reports for office, retail, multifamily, and industrial assets.
- Provided analytical support for litigation-related valuation projects, ensuring accuracy of assumptions, documentation, and historical performance data.

- Assisted leadership in performance reporting for internal KPIs such as valuation turnaround time, report volume, and client satisfaction metrics.
- Recognized for detail-oriented documentation, cross-functional communication, and ability to bridge the gap between valuation professionals and technical teams.

Healthcare Business Analyst | Pearl Health | New Jersey | Dec 2022 – March 2024

- Partnered with clinicians, care teams, and product owners to translate operational healthcare needs into system enhancements, ensuring alignment with regulatory frameworks such as HIPAA, HEDIS, and NCQA.
- Conducted in-depth analysis of structured and unstructured healthcare data, including CMS claims, EHR extracts, and patient engagement records, using SQL, Excel, and internal tools.
- Created and maintained key business artifacts including BRDs, FRDs, data dictionaries, workflow diagrams, and user stories to support scalable development and deployment.
- Led requirements elicitation sessions with clinical operations and provider partners to capture pain points, feature requests, and workflow gaps in patient stratification and care planning tools.
- Supported the design and iteration of dashboards that visualized provider performance, care gaps, utilization trends, and patient risk segmentation to enable proactive intervention.
- Assisted in the development of predictive analytics features, including chronic disease management triggers and emergency visit risk scoring, by aligning clinical logic with data pipelines.
- Worked closely with QA and product teams to develop and execute UAT test plans, verify outcomes against medical use cases, and document resolution paths for identified defects.
- Coordinated feedback loops between frontline clinicians and developers to prioritize usability improvements and reduce cognitive load in provider-facing tools.
- Acted as a subject matter bridge between business and technical teams, translating compliance-heavy healthcare requirements into actionable Agile stories and backlog tasks.
- Delivered ongoing reporting and KPI tracking for CMS program compliance and provider performance improvement; analyzed results to inform future roadmap initiatives.
- Supported the onboarding of new provider groups by helping configure tools, interpret attribution files, and provide analytical insights into panel performance and risk profiles.
- Contributed to the successful launch of a care coordination module that streamlined patient follow-up workflows, leading to a 15% improvement in preventive care closure rates.
- Managed cross-functional dependencies across clinical, engineering, and customer success teams to ensure timely feature rollouts and minimal disruption to existing workflows.
- Participated in daily stand-ups, sprint reviews, backlog grooming, and quarterly roadmap planning to support Agile delivery across multiple product lines.
- Recognized for strong domain knowledge in healthcare data models and the ability to drive collaboration between non-technical healthcare professionals and technical engineering teams.

Education:

Bachelor of Arts in Psychology
City College of New York
August 2020-May 2025
