

Meshwa Inamdar

Data Analyst

Mobile, AL | +1 (470)-884-8290 | meshwainamdar.dataanalyst@gmail.com | [in linkedin.com/in/meshwa129/](#)

PROFESSIONAL SUMMARY

Results driven Data Analyst with over 2 years of experience in data analytics, business intelligence, and machine learning. Expert in utilizing Python, and SQL to extract, analyze, interpret complex datasets and driving decision-making through strategic business insights and visualization. Skilled in data modeling, statistical analysis, and predictive analytics. Proficient in data visualization with Power BI, Tableau, and Excel to effectively communicate insights to stakeholders. Strong background in data warehousing, ETL processes, data wrangling, feature engineering, and A/B testing. Effectively contributed to dynamic data analytics teams, consistently delivering high-quality insights aligned with Agile methodologies. Adept at transforming complex datasets into actionable business strategies, improving efficiency and decision-making.

EDUCATION

Bachelor of Science in Computer Science University of South Alabama, Mobile, AL	May 2022 GPA: 3.91/4.00
---	-----------------------------------

SKILLS

Programming Language	: Python, SQL
Visualization & BI Tools	: Power BI, Tableau, Microsoft Excel (Pivot tables, VLOOKUP)
Database	: MySQL, SQL Server
Cloud Technologies	: AWS (Redshift, S3, EC2, Lambda, Glue)
Data Science Libraries	: NumPy, Pandas, Plotly, Matplotlib, Seaborn, ggplot2, Pyspark, TensorFlow, Scikit-learn
Version control tools	: Git and Github
Working Methodologies	: SDLC, Agile, SCRUM
Operating System	: MacOS, Windows, Linux
Other Skills	: Data Cleaning, Data Wrangling, Critical Thinking, Problem solving, Presentation Skills

EXPERIENCE

Liberty Mutual Insurance, AL Data Analyst	Jan 2025 - Current
- Analyzed large datasets using Python and SQL to identify patterns in patient care, disease progression, and treatment effectiveness, enabling data-driven strategies to improve healthcare delivery and patient outcomes. - Designed custom data reports and interactive visualizations using Power BI and Tableau, delivering real-time insights that enable senior management to make informed, strategic decisions with greater efficiency. - Enhanced predictive analytics accuracy by 12% through incorporating AI-driven techniques, enabling better patient outcome forecasting and resource allocation. - Performed Exploratory Data Analysis on complex healthcare data using Python libraries such as Pandas and NumPy, which reduced data errors by 25% and improve the quality of datasets used for analysis. - Conducted extensive data mining and cleansing using Power Query, designing Power BI dashboards that improve data quality and boost reporting efficiency by 30%. - Developed scalable data pipelines using PySpark and SQL to process large healthcare datasets, reducing data processing time by 20%, through optimized partitioning and parallel processing techniques. - Enhanced data security and compliance by conducting regular audits of data storage systems, ensuring that data management processes adhere to industry standards and minimize risk. - Collaborated with cross-functional teams to gather business requirements and translate them into data models, improving reporting accuracy and aligning insights with strategic business objectives.	
Metlife, AL Data Analyst	Jan 2024 - Dec 2024
- Developed automated patching and release management solutions using Python, optimizing reporting workflows and increasing operational efficiency by 15%. - Designed, developed, and deployed interactive dashboards utilizing Power BI to visualize key performance indicators (KPIs) to facilitate proactive anomaly detection and improve decision-making accuracy. - Collaborated with cross-functional teams to gather business requirements and develop actionable, data-driven solutions, leveraging VBA macros to automate workflows and enhance efficiency. - Executed large-scale data preprocessing and wrangling using Python to refine raw datasets, ensuring data consistency, accuracy, and usability for advanced predictive analytics. - Contributed to the design, testing, and implementation of process improvements to enhance operational efficiency. Identified opportunities for automation, including optimization algorithms and predictive models, to streamline workflows. - Conducted data analysis and root cause investigations to resolve discrepancies and support informed decision-making. - Administered, monitored, and optimized MySQL databases by implementing indexing, partitioning, and security protocols to maintain data integrity, reliability, and compliance.	

- Deployed scalable ETL cloud-based data pipelines leveraging AWS (S3, Lambda, Glue), reducing data processing latency by 30% and improving real-time analytics.
- Worked in a team environment and became familiarized with Agile methodology in software development life cycle, transforming complex concepts into simple, elegant, and approachable experiences, services, and products.

ACADEMIC PROJECTS

Data Mining Project | University of South Alabama

- Collected, cleaned, and prepared a mental health dataset using Python (Pandas, NumPy)
- Performed exploratory data analysis to identify patterns, trends, and data quality issues
- Built and compared basic machine learning models under academic guidance
- Visualized results to support clear and data driven conclusions

Retail Sales & Customer Insights Dashboard | Power BI

- Analyzed retail sales data to identify trends in sales, returns, customer behavior, and store performance.
- Cleaned and modeled data from multiple related tables to ensure accuracy and consistency.
- Created DAX measures for total sales, net sales, returns value, profit, total quantity, and order volume.
- Built interactive Power BI dashboards using KPI cards, charts, slicers, and tooltips to communicate insights clearly.

Excel Expense Analysis Project

- Analyzed expense data using Microsoft Excel to identify spending patterns and monthly trends
- Created pivot tables, formulas, and summary reports to support budgeting insights
- Cleaned and organized raw data to improve accuracy and usability
- Documented analysis steps and findings in a clear and structured format

Software Engineering – University of South Alabama, Mobile, AL

- Collaborated with a team to design a fitness tracking application using Java and SQL.
- Created UML and ER diagrams to model system workflows and database relationships.
- Assisted with testing features and resolving minor issues during development.
