

Mitaali Patel

(667) 409-1485 | mitaalipatel2802@gmail.com | GitHub | LinkedIn

Data Science master's student with hands-on experience in data analysis, dashboard development, and applied machine learning. Skilled in Python, SQL, and Power BI to extract insights from large datasets. Experienced in translating data into actionable recommendations through real-world projects and internships. Seeking Data Analyst or Analytics Intern roles.

SKILLS

Languages: Python, SQL, Java

Data Analysis & ML: Pandas, NumPy, Scikit-learn, Feature Engineering, Exploratory Data Analysis (EDA), Model Evaluation

Big Data & Cloud: Apache Spark (PySpark), Hadoop (HDFS), Kafka, Azure, ETL Pipelines

Visualization & BI: Power BI, Tableau, Matplotlib, Seaborn, Kibana

Tools: Git, Jupyter Notebook, REST APIs

EDUCATION

Master of Professional Studies in Data Science

University of Maryland, Baltimore County

Expected May 2026

Baltimore, MD, USA

Bachelor of Technology in Information Technology

Institute of Advanced Research, GPA: 3.36 / 4.0

April 2023

Gandhinagar, Gujarat, India

PROJECTS

Human Activity & Fall Detection Analysis (YOLOv8)

Python, Data Analysis, Computer Vision

- Analyzed labeled image datasets to classify six indoor human activities including falling, sitting, standing, walking, and sleeping.
- Evaluated model performance using precision, recall, and mAP metrics, achieving 82% precision and 86% mAP@50.
- Built visual outputs to interpret prediction results and assess misclassification patterns.
- Optimized data preparation and training workflows using Google Colab GPU acceleration.

Cybersecurity Threat Detection Using Big Data

Python, Spark, Power BI, Kibana

- Analyzed 50,000+ IoT network traffic records to identify abnormal patterns related to DDoS and malware attacks.
- Performed data cleaning, feature extraction, and anomaly detection using Python and Apache Spark.
- Built interactive dashboards in Power BI and Kibana to visualize threat trends and detection outcomes.
- Reduced threat identification time through automated reporting and visualization workflows.

Data Trust Scoring Engine

Python, Data Quality, Analytics

- Developed an automated system to evaluate dataset quality by detecting missing values, outliers, and feature leakage.
- Designed a scoring framework assigning trust scores (0–100) and risk labels (High, Moderate, Low).
- Created interpretable diagnostics to support data validation before model training and analytics tasks.

EXPERIENCE

Customer Support Executive – Analytics

PetBacker Ltd.

Mar 2024 – Jul 2024

Ahmedabad, India

- Analyzed customer interaction data to identify response bottlenecks, improving operational efficiency by 20%.
- Developed Power BI dashboards tracking user behavior and engagement metrics to support management decision-making.
- Partnered with product and operations teams to improve onboarding workflows and increase customer retention.

Data Analysis & Machine Learning Intern

(n) Code Solutions

Dec 2022 – Jun 2023

Gandhinagar, India

- Analyzed 50,000+ user interaction records to identify 30% dropout trends in educational games.
- Generated 10+ actionable insights to guide game design improvements and user experience optimization.
- Built predictive models for health-related datasets, achieving 92.9% accuracy using neural networks.
- Presented analytical findings to developers and stakeholders using charts and written reports.
