

Summary

Data Analyst with 5+ years in regulated, data-intensive environments. Builds reliable dashboards and ELT/ETL pipelines with SQL, Python, and Tableau/Power BI to drive executive decisions and operational efficiency. Strength in data governance (data classification, RBAC/access controls, PII/FERPA handling, lineage, retention SLAs, auditability) and AWS data platforms (S3/Redshift). Known for turning messy, cross-functional data into decision-grade metrics and delivering measurable impact (25% faster reporting; 30% revenue lift from conversion propensity modeling; 12% improvement in placement outcomes). End-to-end workflow: discovery → metric contract → data modeling → pipeline → QA → dashboard → enablement; strong executive-ready storytelling.

TECHNICAL SKILLS

Programming Languages: Python, R, SQL

Relational Database System: MySQL, PostgreSQL, Oracle, MS Access

BI & Reporting Tools: Tableau, Power BI, Looker Studio, Cognos, KPI Design, Forecasting, Funnel analysis

Data Engineering & Modeling: ELT/ETL design, dimensional modeling; data quality checks (freshness, not_null, accepted_values); documentation

Elucian Tools & Services: Banner 9, Banner ODS, Insight, Financial Aid, Student Information System, ERP, CRM Advance

Tools: Jira, Git, GitHub, Visio, Google Analytics, RStudio, Weka, Scilab, Microsoft Office

Big-Data: AWS (EC2, S3, EMR, Redshift, IAM, CloudWatch)

Data Analytics & Data Management: Data Warehousing, Data Modeling and Management, Data Cleaning and Preprocessing, Data Storyteller, Data Interpretation, Statistical Data Analysis, ETL processing, Critical Thinking

EXPERIENCE**Data Analyst – Lafayette College, USA****Feb 2023 - Present**

- Delivered cross-functional analytics for 10+ departments; standardized KPI definitions and access controls, improving reporting efficiency ~25% and eliminating conflicting reports.
- Built conversion/yield propensity models (logistic regression on ~45k candidate records; academic/demographic/aid features). Insights guided award strategies and outreach, contributing to ~30% increase in revenue tied to conversions.
- Monitored model calibration and lift; set up drift/stability checks and a monthly review cadence with Admissions to tune thresholds and messaging.
- Shipped executive Tableau dashboards that integrated model outputs for weekly decision cycles; improved time-to-insight for leadership.
- Implemented S3 → Redshift data flows (COPY with IAM role, sort/dist key design, staged transforms) with QA checks tracked via Jira and alerts via CloudWatch; reduced ad-hoc data-fix turnaround by ~35%.
- Instituted data-quality triage with root-cause tags (schema change, freshness, mapping, human entry) and SLA-based routing in Jira, lowering mean time to resolution and preventing regressions.
- Established data governance guardrails: metric contracts and data dictionary; RBAC for dashboards and schemas; KMS-encrypted S3 buckets with lifecycle transitions (Standard → Infrequent Access → Glacier Deep Archive); retention & quarterly access reviews; lineage documentation to support audits.

Data Analyst – New Jersey Institute of Technology, USA**Feb 2019 - Dec 2022**

- Analyzed employment outcomes using Advanced Excel and Python; insights supported ~12% improvement in placement results through targeted program changes.
- Built Tableau/Excel dashboards to forecast internship/co-op demand; automated refresh reduced manual prep by ~8 hours/quarter.
- Developed regression/classification prototypes in Python validated against 3 years of history; communicated findings to non-technical stakeholders.
- Drove web analytics recommendations using Google Analytics + Looker Studio, documenting changes and impact tracking.
- Performed ETL/cleansing in SQL and Excel (Power Query/Power Pivot) to transform raw program data into KPIs consumed by leadership.
- Standardized KPIs and created a lightweight data dictionary for career services, reducing metric disputes and improving dashboard trust/adoption.

Data Scientist Intern - Aarogyam Specialty Hospital, India**Dec 2016 - May 2017**

- Performed ETL and wrangling in pandas/NumPy, reducing analysis time ~30% and improving insight accuracy ~20% across epidemiology datasets.
- Produced comparative visual analyses in Tableau and R that supported clinician decision-making.

Education**Master of Science in Computer Science – University of the Cumberland****August 2025 - Present****Master of Science in Data Science - New Jersey Institute of Technology****August 2018 - May 2020**
