Buffalo, NY | +1(716)910-9595 | divyamsha05@gmail.com| [Linkedin](#) | [Github](#)

SKILLS

AWS, Azure, Docker, Kubernetes, Jenkins, GitHub, Bitbucket, Nexus, MySQL, PostgreSQL, MongoDB, Ansible, ArgoCD, Terraform, Helm, CloudFormation, New Relic, DataDog, Grafana, Prometheus, Elasticsearch, Fluentd, Kibana, Python, Shell Scripting, Java, Linux, Windows, Customer Advocacy and Support, Basic Security Concepts (SSL/TLS, HTTPS, Firewalls), Information security & Assurance

SUMMARY

Experienced Site Reliability Engineer with expertise in deploying releases, managing hotfixes, and orchestrating cloud migrations. Successfully implemented CI/CD pipelines, automated AWS resource management, and maintained high availability for critical production environments. Proven track record in infrastructure automation using Ansible and Terraform, and proficient in monitoring and observability tools. I excel in resolving incidents and coordinating on-call duties.

WORK EXPERIENCE

State University of New York Student Assistant Collaborated with the department chair to plan and grade coursework on the university portal for MBA students, ensuring timely feedback and improved student performance	Buffalo, New York <i>Mar 2024 – May 2024</i>
FranConnect Site Reliability Engineer - Managed FranConnect's multi-tenant SaaS CRM cloud platform by implementing a scalable automation solution, achieving over 99% uptime and ensuring availability for production environments - Automated builds, managed releases, patches, and hotfixes, and deployed updates, improving deployment efficiency and reducing downtime - Maintained reliable data backups and automated processes across AWS-managed RDS: MySQL, PostgreSQL, Redshift, and MongoDB, ensuring data integrity and availability for developers - Developed an Automated AWS Resource Usage Dashboard for Confluence documentation using Python and AWS SDK (boto3), enhancing resource tracking and documentation efficiency - Engineered infrastructure as code tools such as Ansible & Terraform to manage both non-production and production environments, improving infrastructure automation - Managed the implementation of an automation pipeline using Ansible and Jenkins for Java Application deployment on Apache Tomcat, reducing manual errors by 75% - Implemented CI/CD pipeline for automated deployments of 36 microservices on AWS Kubernetes cluster, reducing deployment time and improving containerization and orchestration - Deployed Kubernetes policy engine to enforce security and compliance policies across the Kubernetes cluster, enhancing overall system security - Configured 40+ new SaaS clients and migrated 10+ legacy customers to the SaaS platform by automating configurations for Database, S3 service, and AWS Load Balancer rules, resolving networking/DNS issues - Implemented best observability practices using AWS CloudWatch, AWS serverless Lambda, New Relic, DataDog and ELK to track application performance and Kubernetes cluster metrics in real-time, resulting in a 20% enhancement in system reliability. - Participated in Major Incident Management bridge calls and followed SRE principles for blameless post-mortems for prevention.	Noida, Uttar Pradesh <i>Mar 2022 - Jun 2023</i>
Infosys Systems Engineer (SRE) - Completed training in Java, Spring Boot, Angular, Data Structures, DBMS, and DevOps principles, enhancing technical proficiency - Troubleshooted payment merchant outages by implementing alerting and incident response, ensuring minimal disruption to Adidas e-commerce operations and maintaining high customer satisfaction - Leveraged observability tools like Prometheus, ELK, Grafana, and Instana for application & Kubernetes cluster monitoring. - Collaborated with cross-functional teams across Germany & India, following Agile SDLC methodologies to implement proactive measures that led to a reduction in impactful incidents, achieving an uptime of above 99%. - Leveraged debugging and troubleshooting skills to improve the reliability and performance of mission-critical Java applications by developing Jenkins jobs for analyzing logs, thread dumps, and heap dumps. - Conducted root cause analysis of system failures in Java applications and implemented corrective actions using JIRA and Confluence, ensuring timely resolution within SLAs.	Mohali, Punjab <i>Nov 2020 - Mar 2022</i>

CERTIFICATIONS | COURSES | PROJECTS

- Introduction to SRE with Google certification:** Instructor: Salim Virji (SRE @Google)
- SRE Fundamentals with Google:** Instructor: Salim Virji (SRE @Google)
- Lean Six Sigma Green Belt Training:** Meliora Consulting
- Completed online course on Web Security Fundamentals and Networking, covering topics such as HTTP, HTTPS, and encryption methods.

PROJECT 1: DEPLOYMENT OF NODE JS APPLICATION ON AWS CLOUD WITH ANSIBLE AUTOMATION

- Configured Ansible to deploy Node Js application on AWS cloud with a single command using Ansible playbooks.
- Used Ansible built-in modules for setting up environment variables, file permissions, and status checks of the application.

PROJECT 2: MICROSERVICES APPLICATION & KUBERNETES CLUSTER OBSERVABILITY

- Built a centralized platform for managing and analyzing logs from distributed microservices applications hosted on the AWS EKS cluster.
- Set up monitoring of the cluster and the application using Prometheus & Grafana and automated the deployment using ArgoCD.

PROJECT 3: GITOPS DRIVEN CI/CD PIPELINE FOR 3-TIER MICROSERVICES APPLICATION DEPLOYMENT ON EKS

- Deployed "Stan's Robot Shop" microservices application consisting of 8 services & 2 databases on AWS EKS cluster.
- Implemented GitOps-driven workflow by building CI/CD pipeline using Jenkins, ArgoCD, Kubernetes, Docker, Helm & open-source tools like Kyverno for container orchestration and policy enforcement.

EDUCATION

State University of New York at Buffalo <i>Master of Science (MS) in Management Information Systems (GPA- 4.0)</i> Thapar Institute of Engineering & Technology <i>Bachelor of Engineering (B.E.) in Electronics Engineering</i>	Buffalo, New York <i>Graduation Date: Jun 2024</i> Patiala, Punjab <i>Graduation Date: Jul 2020</i>
