SUSHANTH PUNURU

Java Developer

PROFESSIONAL SUMMARY

- A graduate student possessing over 4+ years of immersive experience in the complete software development lifecycle, specializing in frontend, backend, Multi-tier, and N-tier architectures within the dynamic domains of Insurance and Finance.
- Holds a Master's degree in computer science, equipped with advanced knowledge and practical proficiency in key technologies such as Java 8, ReactJS, Spring Boot, Data Structures, and algorithms, enabling the creation of robust and innovative solutions.
- Demonstrates adeptness in database management, including Oracle, MySQL, PostgreSQL, and NoSQL Database (MongoDB), coupled with familiarity with Linux commands and AWS services like EC2 and S3, ensuring seamless integration and efficient data handling.
- Actively engages in Agile methodologies, participating in sprint cycles with cross-functional teams, and leveraging strong interpersonal skills to foster collaboration, effective leadership, and conflict resolution, contributing to successful project delivery.
- Exhibits hands-on expertise in leveraging Java 8 features such as Lambda expressions and Stream API, strategically employed to optimize application performance and streamline data processing operations.
- Possesses extensive experience in designing and implementing microservices architectures using Spring Boot, adhering to domain-driven design principles, thus ensuring scalability, flexibility, and maintainability of applications.
- Proficiently applies SDLC methodologies, encompassing Agile and Waterfall, to meticulously plan and execute software development projects, integrating best practices to achieve superior outcomes.
- Demonstrates prowess in Java/J2EE technologies, encompassing JDBC, JSON, Restful, Hibernate, Spring MVC, Spring Boot, and Microservices, orchestrating the development of robust, scalable, and feature-rich applications.
- Skilled in the deployment and management of Kubernetes clusters, implementing auto-scaling, load balancing strategies, and crafting RESTful API services to facilitate seamless communication between applications and third-party systems.
- Exhibits comprehensive proficiency in Docker, AWS cloud services, Spring Framework modules, CI/CD pipelines (Jenkins), and version control tools like Git, employing cutting-edge technologies and methodologies to drive innovation and efficiency in software development endeavors.

SKILLS

Java | C | C++ | JavaScript | React JS | Restful APIs | Spring Boot | HTML | CSS | Angular JS | GraphQL Oracle SQL | MySQL | DB2 | MongoDB | SQL | PL/SQL | Apache Kafka | Cloud
Microservices | Spring Framework | Hibernate | Node JS | Express JS | Junit | Mockito | Jira | WebPack Data Structures | OOPs concepts | JQuery | JSON | AWS EC2 | S3 | Lambda | ECS | Postman | Splunk
Docker | Kubernetes | SOAL/XML/Rest Web Services | Agile (Scrum) | Jenkins | Log4j | SOAP UI | JSON

WORK EXPERIENCE

T-Mobile

Environment: Java, J2EE, JSP, Servlets, Spring MVC, AngularJS, MongoDB, ExpressJS, ReactJS, NodeJS, Servlets, IntelliJ or Eclipse, JDBC/Hibernate, SVN, Jenkins, maven, Git Jira, CI/CD, Bootstrap, JavaScript, jQuery, JSP, CSS, XML, Html, Apache, JMS, Rest, Oracle, Maven, Log4j, JUnit, GitHub, Windows.

- Developed scalable systems using Java/J2EE, Spring Boot, and REST, focusing on efficient backend logic development while ensuring seamless integration with external interfaces to enhance system performance and reliability.
- Implemented robust role-based access control mechanisms using Spring Security to safeguard system resources and ensure that only authorized users can manage policies, enhancing overall system security.
- Demonstrated versatility across various technology stacks, including proficiency in both the MERN (MongoDB, ExpressJS, ReactJS, and NodeJS) stack and Spring Boot, showcasing adaptability to diverse project requirements.
- Created reusable ReactJS components utilizing JSX, effectively managing markup, props, state, and life cycle methods to promote code modularity, scalability, and reusability.
- Developed Single Page Applications with React Router to deliver a seamless and intuitive user experience, facilitating efficient navigation for both agents and customers, thereby enhancing user satisfaction.
- Leveraged Java 1.8 features such as lambda expressions for parallel streams and filters, contributing to enhanced efficiency and performance in data processing and manipulation tasks.
- Utilized Redux for state management within the application, employing pure functions for reducers to ensure a predictable and easily maintainable state container across the entire application.
- Employed Express.js and MongoDB for backend development, leveraging the capabilities of MongoDB for data persistence and Express.js for building robust and scalable server-side applications.
- Conducted comprehensive testing of REST API and SOAP web services using industry-standard tools like Postman and SOAP UI, ensuring the reliability and robustness of service endpoints.
- Demonstrated expertise in ES6 features and functional programming concepts, such as arrow functions, spread syntax, and promises, contributing to enhanced code readability, maintainability, and performance.
- Spearheaded the implementation of CI/CD systems with Jenkins on Kubernetes, leveraging Docker for containerization and runtime environment management, thereby streamlining the development, testing, and deployment processes.
- Proficiently authored test scripts using Jest for React components, ensuring the robustness and reliability of the application's frontend functionality, and utilized Git and Jira for efficient version control and project tracking.
- Employed styled and glamorous components for enforcing best practices in UI styling, promoting consistency and maintainability across the application's user interface.

Software Development Engineer**Jan '19 - Sep '21****Tata Consultancy Services****Chicago, IL**

Environment: Java, J2EE, JSP, Servlets, Hibernate, Rest, React, Springboot, AWS, Azure, Soap, Javascript, HTML, CSS Bootstrap, Docker, Kubernetes, Kafka and Oracle SQL, AWS

Client: CNA Financial Corporation

- Developed scalable systems with Java/J2EE, Spring Boot, REST, AWS, and React, showcasing proficiency across the tech stack.
- Utilized Java 1.8 features like Lambda Expressions and Parallel Streams for efficient backend logic development.
- Implemented role-based access control using Spring Security, enhancing system security.
- Created reusable ReactJS components with JSX, employing life cycle methods and DOM event handling.
- Integrated raw HTML templates within JavaScript code using JSX, ensuring smooth transpilation with Babel and Webpack.

- Developed a Spring Boot web application for displaying user billing information, aiding agent planning.
- Migrated ETL jobs to Control M workload automation, reducing monitoring and maintenance time.
- Implemented client-side interfaces with React JS and React-router for efficient single page application development.
- Deployed CollectionQ application on AWS EC2 instance, utilizing S3 bucket for storage needs.
- Utilized Spring Boot with Kafka messaging for reliable external interface communication.
- Implemented Spring Batch for efficient processing of large record volumes.
- Developed Kafka-Streaming applications for consuming and processing data from Kafka topics.
- Conducted REST API and SOAP web services testing using Postman and SOAP UI tools.
- Resolved bugs during unit and integration testing using JUnit, Mockito, and automated application build and deployment pipelines with Jenkins.
- Achieved a significant increase in annual income by resolving user issues, resulting in \$12.1 billion in direct written premiums in property and casualty insurance.

EDUCATION

Masters in computer science

Sep '21 - May '23

California State University

Bachelors in computer science and engineering

Jul '15 - May '19

G.Pulla Reddy Engineering College

TECHNICAL PROJECT

Web application built using MERN Stack

- Developed a Food Delivery Application to display the Restaurants and their Menu cards. The application was managed using GitHub repository and hosted on AWS EC2 instance.
- Role-Based Authentication was implemented to provide different User Interface (UI) for different roles such as members/non-members/admin.
- Created intuitive and interactive user interfaces with reusable React components. Implemented responsive layouts, handled client-side routing, and integrated APIs to fetch and display data dynamically, delivering a seamless user experience across devices.
- Used Node.js and Express.js to build robust server-side logic, handle API requests, and integrated with MongoDB database.
- Mentorship

Java Tutor January 2018 - December 2018

- Java programming | API | JDBC | Collections | Multithreading | OOPS concepts | Arrays | Strings | Exception Handling | Loops and Data Types.

CERTIFICATIONS:

- **CyberOps Associate | CISCO | August 2022**
- **SnowPro Core Certification | Snowflake | November 2023**
