SUMMARY

Experienced Software Engineer with over 5 years of rich experience in Java, Spring Boot, Python, JavaScript, and React backed by robust skills in creating scalable systems and RESTful APIs. Demonstrated proficiency in server-side development, including database interactions and application integration. Skilled in deploying cloud-based microservices using AWS, Azure, and Docker enhancing software performance and reliability. Adept in Agile methodologies and proficient in utilizing Jira for streamlined project management, dedicated to delivering high-quality, efficient software solutions

SKILLS

Languages: Java/J2EE, Python, C++, Perl, C, JavaScript.

Java APIs /Frameworks: EJB, J2EE, JSP, JSTL, Custom Tag Libraries, JAX-RS, JDBC, Servlets, JNDI, JMS, JUnit, Mockito, AWT, Spring MVC, Spring AOP, Spring DAO, Spring Core, Spring Security, Spring actuator, Spring Boot, JPA, Hibernate, Spring JDBC, Spring Data JPA, Spring Data REST, Log4j, Slf4j, Active MQ, RabbitMQ, Apache, MEAN Stack, MERN Stack.

Web technologies: HTML, CSS/CSS3, HTML/HTML5, Bootstrap, JSP, Ajax, XML, JSON, NodeJS, Typescript, Express, ReactJS.

Databases: Oracle, MySQL, SQL/PL-SQL, SQLite, MongoDB, Elasticsearch, PostgreSQL, Cassandra, DynamoDB.

Tools/Other Technologies: AWS, EC2, Elastic Beanstalk, S3, Route 53, Git, Jira, Docker, Jenkins, Postman, Google Cloud, Android Studio, Maven, Gradle.

Build Tools/Version Control: Git, GitHub, Bitbucket, Jira, IntelliJ, Confluence, Swagger, IDEA, VSCode, Eclipse, Apollo GraphQL.

Data Serialization/Project Management: JSON, XML, YAML, JIRA, Asana, Trello, Ansible, Chef.

Operating Systems: Windows, Unix, Linux.

PROFESSIONAL EXPERIENCE

Software Developer- Full Stack, *GM Financial*

Feb 2024 – Present | Texas, USA

- Streamlined data collection across all the applications in the organization Leveraging Java, and aggregating all repo's diverse testing metrics, which expedited the analytical team's data access and analysis by 80%.
- Performed server-side components with JSP, JSTL, and custom tag libraries to manage the presentation layer efficiently.
- Executed business logic and data processing layers using Spring Boot, Spring Security, and Spring MVC to ensure scalability and security across enterprise applications.
- Implemented GraphQL to build efficient and flexible APIs with queries, mutations, and custom schemas tailored to project requirements, reducing API response times by 30% and improving data fetching, Increasing user experience and backend performance by 20%.
- Configured and managed cloud environments using AWS for scalable banking solutions, implementing services such as ECS, EC2, RDS, S3, Lambda, DynamoDB, SQS/SNS, CloudWatch, and Cloud formation to enhance the performance.
- Performed comprehensive unit and integration tests using JUnit for Spring Boot APIs and Jest for React.js components, ensuring robust data aggregation, API functionality, and frontend performance.
- Integrated Kafka-based microservices with enterprise applications, ensuring seamless event-driven communication and reducing latency by 25%.
- Led the integration of asynchronous event-driven workflows using Kafka as the messaging backbone.
- Experienced with build tools such as Maven and Gradle for project configuration, dependency management, and streamlining build processes.
- Proficient in DevOps practices, leveraging CI/CD pipelines with Jenkins, Docker, and Kubernetes to automate testing, building, and application deployment.

Java Full Stack Developer, *Alcon*

Jan 2023 – Oct 2023 | Texas, USA

- Developed RESTful API responses to interact with MongoDB, performed analytical operations on the stored data, and designed a user-friendly dashboard with React.js, JavaScript, and Node.js, achieving a 30% improvement in operational efficiency.
- Executed unit tests using JUnit and integration tests to ensure code quality, leveraging TestNG and Selenium for end-to-end testing.
- Incorporated Beaver Logger into Node.js applications to enable structured logging in JSON format, ensuring better log readability and facilitating efficient analysis.
- Applied secure authentication and authorization protocols, including OAuth2.0 and JWT, to enforce stringent access control policies for API endpoints.
- Utilized hooks for managing state and side effects in functional components.
- Deployed Azure DevOps tool as source control repository.
- Streamlined development and deployment processes by leveraging version control systems like Bitbucket and building automation tools like Maven, ensuring smooth project execution.
- Leveraged Microsoft Azure services, including Function, SQL Database, Blob Storage, and AppService, to boost cloud capabilities and achieve a 15% increase in performance.

Java Full Stack Developer, *State Bank of India*

Nov 2021 – Jun 2022 | Mumbai, India

- Revamped a legacy Java codebase to boost code reusability by over 40% by strategically applying inheritance optimization, design patterns, and enhancing modularity with adherence to SOLID principles.
- Developed Spring Boot APIs for data retrieval and designed a responsive front-end with React.js, Tailwind CSS, and JavaScript, elevating stakeholder engagement by 30%.

- Built REST APIs for data retrieval and designed React visualizations, significantly improving OEM stakeholder decision-making efficiency by 40%.
- Optimized navigation data processing in infotainment systems through an automation solution built with Spring Boot and Python, reducing manual effort and stakeholder dependencies by 80%.
- Connected PostgreSQL with backend frameworks like Spring Boot, ensuring efficient data handling and seamless API interactions.
- Collaborated with DevOps teams to integrate Kafka-based microservices into monitoring systems like Prometheus and Grafana.
- Constructed backend logic in Spring Boot to distribute tasks to specific production units based on RabbitMQ routing.
- Built and launched the application on Eclipse IDE and WebLogic Web Servers, crafted a Maven build script to handle packaging, testing, and deployment in WebLogic, and incorporated Log4J and Splunk for logging and tracing.
- Strong Database design and development experience, which includes developing Stored Procedures, and functions using SQL and PL/pgSQL in PostgreSQL databases.
- Created Kafka Stream applications for monitoring and alerting systems, providing real-time insights into operational metrics and minimizing the response time for incident handling
- Supervised the entire CI/CD pipeline with Jenkins, refining release workflows and ensuring seamless integration with AWS cloud infrastructure, including orchestration of EC2 instances, S3, RDS, SNS and Elastic Beanstalk to guarantee a 99.94% uptime for the microservice application.
- Formulated unit tests with JUnit, achieving a robust 90% code coverage, and contributed to code reviews by providing constructive feedback that elevated overall code quality by 15%.

Java Developer, *Trent Limited*

Jun 2019 – Oct 2021 | Mumbai, India

- Focused on front-end development using JSP, HTML, CSS3, JavaScript, and jQuery, wrote scripts for deployment on the UNIX platform, and handled coding tasks involving JAVA, J2SE/J2EE, JBPM, EL, and JavaFX.
- Used Spring MVC as a Web module, involved in the design, and development of new Action classes to interact with business logic and Used Hibernate as ORM to map Java classes to database tables
- Implemented Kafka Connect to stream data between different systems and databases, such as MySQL to Elasticsearch.
- Applied microservices architecture to enable communication through synchronous protocols like HTTP and REST while working on SOAP implementation.
- Implementing secure authentication mechanisms, including OAuth2, JWT, and role-based access control (RBAC), to ensure secure user data management.

PROJECTS

Text to Podcast using Artificial Intelligence

- Developed the Python code to transform written blogs into compelling video/podcast content, revolutionizing content delivery.
- Transformed accessibility and engagement by seamlessly bridging the gap between traditional written content and dynamic audio-visual formats, enabling a more inclusive and interactive user experience.
- Spearheaded the project by overseeing the development of backend code, ensuring a smooth conversion process. Additionally, led a team of 10 to optimize workflow, improving overall efficiency.
- Demonstrated effective leadership by successfully coordinating a diverse team, fostering collaboration, and ensuring project success.
- Enhanced user engagement with key features like real-time unit conversion, easy 15-day forecast access, and intuitive location customization. Utilized design patterns including Factory and Observer for code organization and maintainability.

A Deep Learning Approach for Cardiac Arrhythmia Detection

- Analyzed ECG recording datasets of patients with various cardiac conditions and applied Convolutional Neural Networks (CNN) to classify and identify different types of arrhythmias.
- Preprocessed the ECG data by removing noise, normalizing signal amplitudes, and segmenting into individual heartbeats.
- Optimized hyperparameters, including learning rate, batch size, and network architecture, to improve the model's performance.
- Deployed on Google Cloud Platform (GCP), leveraging its robust infrastructure and services for reliable and scalable hosting solutions.

EDUCATION

Valparaiso University, Valparaiso

IN, USA

Master of Science, Information Technology

Amrita School of Engineering

Bangalore, India

Bachelor of Technology, Computer Science

CERTIFICATIONS

- AWS Certified Developer – Associate
- Java Professional – Oracle
- Generative AI Fundamentals – Oracle
