<https://www.linkedin.com/in/komal-chowdary-yarlagadda-5776a0326/>

PROFESSIONAL SUMMARY

- Around 5 years of experience in analysis, design, development, testing of Web, Client/Server based large Scale Distributed applications across the entire SDLC using **Java** and **J2EE** technologies.
- Practiced implementation of **Java 8** concepts like **Streams API**, **Lambda functions**, **Generics**, **Time API**, **Functional Interfaces**, **Multi-threading**, **Transaction Management**, **Exception Handling** and **Collection API**.
- Engaged in development of **Restful Web Services**, using **Spring Boot**, **Spring Cloud**, **Spring MVC**, **JPA**, **HQL**, **Spring Security**, **AOP** and **AWS**.
- Expertise in developing **Micro services** using **Spring Boot** and **Node JS** to build more physically separated modular applications which will improve scalability, Availability, Agility of application.
- Utilized **spring framework** for **dependency injection**, **Spring Web MVC** for the controllers and created annotation-based mapping using **Hibernate ORM** tool.
- Experienced in developing front end applications using **HTML**, **CSS3**, **Bootstrap**, **Angular**, **Vue.JS**, **React JS** and developing dynamic web pages.
- Experience in using various **JavaScript** Web application related libraries such as **Node Js**, **Angular**, **React js** and **jQuery UI**.
- Strong working experience on **SQL** Databases like **MySQL**, **MS SQL Server**, **Oracle**, **DB2** and **PostgreSQL**.
- Extensive experience in working on projects with **Agile** methodologies such as **Test-Driven Development (TDD)** and **SCRUM**.
- Strong ability to gather and analyze user feedback to inform product improvements and enhancements.
- Proven track record of successful collaboration in teamwork to achieve project goals.
- Familiar with sprint planning and execution within **Agile frameworks** to deliver incremental value.
- Proficient in applying **Scrum methodologies** to enhance project management and team productivity. Proficient in **JavaScript** for building dynamic and interactive web applications.
- Strong customer service skills, ensuring user satisfaction and addressing concerns promptly.
- Strong focus on execution and delivering projects on time and within scope.
- Skilled in **full stack development**, working across both frontend and backend technologies.
- Strong analytical and problem-solving skills for identifying and resolving complex problems in a fast-paced environment.
- Experience in assessing market trends and leveraging insights for strategic decision-making.
- Proficient in designing and implementing distributed systems for scalable applications.
- Familiar with data science concepts, including data analysis, visualization, and machine learning techniques.
- Proficient in **JavaScript** and **C++**, with experience in building applications and solving complex problems.
- Strong ability to develop and communicate a clear vision for projects and apply strategy that align with organizational goals.
- Knowledgeable in financial planning principles to support budgeting and resource allocation.
- Committed to ensuring digital accessibility, applying best practices to create inclusive user experiences.
- Proficient in developing automated test scripts to enhance software quality and efficiency.
- Skilled in shell scripting for automation and process improvement.
- Knowledgeable in **RESTful** services for seamless integration between applications
- Familiar with Version Control for source code management and collaborative development.
- Proficient in **Scala** and **Go** for developing scalable applications and services.
- Experience with **Hadoop** for processing and analyzing large datasets.
- Proficient in using **Docker** and **Kubernetes** for containerized application deployment, orchestration, and management. Experience with **Docker** file creation, container image building, and multi-container architecture.
- Proficient in using containerization technologies such as **Docker**, **Kubernetes**.
- Strong verbal and written communication skills, able to effectively articulate technical concepts to both technical and non-technical stakeholders.
- Adept at working in cross-functional teams, leveraging agile methodologies and version control systems (**Git**, **GitHub**) for seamless collaboration on software projects.
- Experience with building and deploying applications on **AWS** platforms (e.g., **EC2**, **S3**, **Lambda**, **ECS**, **ECR**).
- Excellent problem-solving and debugging skills along with deep understanding of computer architectures, data structures, and algorithms.
- Experience building **GraphQL** APIs and other API architectures. Proficiency with **ReactJS**, **NodeJS**, **TypeScript**, and **JavaScript**.
- Experience with **AWS**, **CI/CD** pipelines (**CodePipeline**, **CodeBuild**, **GitHub Actions**), and **Infrastructure as Code (CDK)**.
- Experience performing troubleshooting/root cause analysis for operational issues and leading efforts on engineering teams required to improve quality of deliverables from their team leveraging well-defined quality metrics.
- Experienced in working with and customizing popular CMS platforms such as **WordPress**, **Drupal**, and **Joomla**.
- Skilled in writing and executing unit tests to ensure the reliability and stability of code.
- Experience with asynchronous workers and resilient messaging services such as **Kafka**, **SNS** and **SQS**.
- Utilized **Natural Language Processing (NLP)** techniques and integrated the model with real-time customer data streams from **Big Data** platforms like **Apache Kafka**.

- Designed and deployed an AI-based chatbot for automating customer service tasks.

TECHNICAL SKILLS

Programming Languages	Java/J2EE, Python, SQL, PL/SQL, Kotlin
Frameworks	Angular, Bootstrap, ReactJS, NodeJS, Vue.JS, Struts, Spring, Hibernate, JPA, Django, Flask
Java Enterprise API	Servlets, JSP, EJB, JMS, JDBC, Java Multithreading, Web services
Cloud Technologies	AWS, Azure, GCP
Databases & Programming	MySQL, SQL, PL/SQL, Oracle, MongoDB, SQL Server, PostgreSQL, DynamoDB, Cosmos DB.
Software Engineering	UML, Design Patterns, Object Oriented Methodologies, Service Oriented Architecture, Test Driven Development, Scrum and Agile methodologies
XML Technologies	XML, DTD, SAX, DOM, SOAP, WSDL, XPath
Application Servers	Apache Tomcat, Apache Camel, JBoss, WebLogic, IBM WebSphere
Operating Systems	Windows, Linux, UNIX.
IDEs & Tools	GIT, JIRA, Maven, STS, IntelliJ Eclipse, NetBeans, JUnit, Mockito, Log4j, Soap UI, Bitbucket, CVS, MS Visio, Putty, SVN, jasmine, karma, kafka, Spark
DevOps Tools	Jenkins, Docker, Azure DevOps, Kubernetes, SonarQube, CI/CD

PROFESSIONAL EXPERIENCE

Client: Chase (New York)

(July 2023 - Till Now)

Role: Java Developer

- Designed and implemented scalable Java microservices for fraud detection and prevention, resulting in enhanced system efficiency and improved overall performance.
- Optimized real-time credit card transaction processing through advanced JVM tuning and efficient memory management, driving higher processing speeds and lower latencies.
- Seamlessly integrated legacy mainframe systems with modern Java libraries and APIs, ensuring smooth data interchange and compatibility without disrupting existing workflows.
- Collaborated with cross-functional teams to deploy Java applications on the AWS cloud platform, leveraging CI/CD pipelines for continuous integration and high availability.
- Developed reusable Java libraries to standardize development processes, reducing redundancy and improving efficiency across multiple projects.
- Implemented robust security measures using Spring Security, ensuring safe authentication and authorization, and protecting sensitive data across applications.
- Monitored and analyzed Java application performance with industry-standard profiling tools, optimizing resource utilization and response times to enhance performance.
- Addressed complex production issues by meticulously debugging, analyzing logs, and implementing proactive troubleshooting strategies, reducing system downtime.
- Translated intricate business requirements into scalable and efficient Java solutions, ensuring that technical implementations aligned with overall project objectives.
- Provided mentorship and guidance to junior developers, fostering a culture of collaboration, knowledge-sharing, and continuous learning within the team.
- Implemented Spring Boot microservices for processing Kafka cluster messages, leveraging Kafka Streams for error handling, state stores for aggregations, and Kafka Consumer Rebalancer for offset management.
- Embraced Agile methodologies (Scrum, Kanban) to manage the entire Java development lifecycle, ensuring continuous improvement and timely delivery of projects.
- Designed and developed RESTful APIs in Java, enabling seamless data exchange and integration across internal and external systems.
- Contributed to open-source Java projects, incorporating community-driven innovations and best practices to expand and enhance the overall technology stack.
- Led **sprint** planning sessions to ensure timely **release** of high-quality products, focusing on **results-oriented** outcomes.
- Collaborated with cross-functional teams to develop web applications using **JavaScript** and **CSS**, enhancing user experience and engagement.
- Gathered and analyzed **feedback** from users to drive continuous product improvement and ensure alignment with user needs.
- Developed dynamic web applications using **ReactJS** and **AngularJS**, improving user engagement and performance.
- Implemented **Elasticsearch** to enhance search functionality, resulting in faster query responses and improved user satisfaction.
- Leveraged **cloud computing** services to deploy scalable applications, ensuring high availability and reliability.
- Designed, developed, and maintained **RESTful APIs** for web and mobile applications, ensuring high availability, performance, and scalability.
- Developed and maintained automated test scripts using **Selenium WebDriver**, **JUnit**, and **Cypress** for web applications.
- Led **collaborative** efforts to design and implement Excel-based data solutions, streamlining financial reporting for **Fintech** applications.
- Implemented **system integration** strategies to ensure smooth interaction between hardware and software components in embedded systems.

Client: State Farm (Bloomington)

June 2020 - Aug 2022

Role: Java Developer

- Designed and developed scalable Java applications for core operations, including customer portals and billing systems, ensuring robust functionality and intuitive user interfaces.
- Collaborated with cross-functional teams to gather comprehensive requirements, conduct thorough testing, and ensure seamless deployment of solutions.
- Employed advanced object-oriented principles and design patterns to maintain clean, reusable Java codebases, optimizing both efficiency and scalability.
- Leveraged Spring and Hibernate frameworks effectively to accelerate development cycles and integrate new features smoothly into existing systems.
- Conducted thorough code reviews and knowledge-sharing sessions, fostering a culture of high code quality and continuous improvement within the team.
- Enhanced application performance through detailed analysis, profiling, and targeted efficiency improvements, leading to a more responsive overall system.
- Stayed informed on emerging Java technologies and industry trends, proactively suggesting and implementing innovative solutions aligned with business objectives.
- Developed secure Java applications that adhere to stringent industry best practices and internal security standards, ensuring data integrity and user privacy.
- Quickly resolved complex production issues through systematic troubleshooting and debugging, minimizing downtime and ensuring business continuity.
- Integrated and rigorously tested Java modules to guarantee seamless functionality and compatibility across the application ecosystem.
- Automated repetitive development tasks using customized build scripts and robust CI/CD pipelines, improving both development efficiency and deployment reliability.
- Configured and optimized Java application servers to ensure optimal performance, scalability, and resource utilization in production environments.
- Monitored and analyzed application logs and performance metrics to proactively identify and address potential bottlenecks and issues.
- Led the migration of legacy applications to newer versions, enhancing performance, security, and maintainability.
- Designed and implemented **RESTful APIs** to facilitate efficient data exchange and interoperability between diverse applications and systems.
- Utilized cloud-based solutions such as **AWS** and **Azure** for scalable deployment and effective management of Java applications.
- Designed and implemented scalable **data pipelines** using **Apache Beam** on **Google Cloud Dataflow** to process large datasets efficiently.
- Developed complex **SQL queries** in **BigQuery** to support real-time analytics and reporting.
- Collaborated with teams through **Confluence**, maintaining clear project documentation and knowledge sharing.
- Designed and implemented RESTful APIs and microservices using Node.js and Express.js, improving backend efficiency by 30%.
- Deployed Node.js applications to OpenShift clusters, ensuring scalable and high-availability environments. Managed deployment pipelines using OpenShift's integrated CI/CD tools.

Client: 7 Eleven (Irving)

June 2018 - June 2020

Role: Java Developer

- Enforced a team in designing, developing, debugging, and testing 15+ web-based and client-server business applications using **Java/J2EE** web applications, leading in a 30% boost in overall project efficiency.
- Implemented modules using **Core Java** APIs, **Java Collections**, Java Streams, multi-threading and object-oriented designs.
- Involved in implementing the **Microservices** based on RESTful API utilizing **Spring Boot** with **Spring MVC**, **NodeJS**.
- Implemented **Kafka** messaging to pull in stock data from the queue and load it into Oracle table.
- Implemented the application using **Spring IOC**, **Spring MVC Framework**, **Spring Batch** and handled the security using **Spring Security**.
- Configured **VM's** on **Azure** Cloud and deployed applications.
- Implemented caching strategies using **data structures** like caches and queues to improve database query response times and overall application performance.
- Designed the user experience using UI Libraries including **ReactJS**, **JavaScript**.
- Enhanced on developing responsive design with **React JS**, **HTML**, **CSS3**, **JavaScript**, **Bootstrap**, **jQuery**
- Implemented the **Flux** workflow for the stability and reduce the complexity of application and **Redux** workflow for managing the data in the application.
- Integrated **Azure** Cloud Services, such as **Azure App Service**, **Azure Functions**, and **Azure Storage**, into Java applications.
- Worked extensively with **Azure SQL** Database for data storage and retrieval in Java applications.
- Enhanced on database technologies such as **MySQL**, **Oracle** and Configured **MySQL** database using **JDBC** and efficiently wrote queries for **CRUD** operations.
- Worked with No SQL **Cassandra** to store, retrieve, and update and manage all the details for Ethernet provisioning and customer order tracking.
- Strong experience with **MongoDB** development (reports, schema design, map reduce functions) and migrations from SQL relational databases to **NoSQL** databases like MongoDB.
- Utilized **SVN** as version control repository, **JIRA** for ticketing and updating the **JIRA** tickets and **Wiki** to report on and document the solutions developed.
- Contributed to continuous integration and deployment using **Git**, **Jenkins**.
- Followed **AGILE (SCRUM)** methodologies, had sprint planning every two weeks and set up daily meetings to monitor the status.

- Led product design initiatives, collaborating with cross-functional teams to create user-centric designs for web and mobile applications.
- Built and maintained scalable web applications using **Node.js** and **JavaScript**, ensuring high performance and security.

EDUCATION

- Master's in computer science **and engineering** from Texas A and M University - Kingsville. May-2024
