

MANAN NITIN MISTRY

120 W Cityline Dr, Richardson, TX - 75082 | (469) 956 7649 | mistrymanan97@gmail.com | [linkedin.com/in/mistry-manan11](https://www.linkedin.com/in/mistry-manan11)

EDUCATION

Master's in science, Business Analytics, The University of Texas at Dallas, Dallas TX

Jan 2023 - Dec 2024

GPA: 3.64/4.0

Student Assistant (Nov 2023 - Current) – Living Learning Communities

Coursework: Big Data, BA with R, Applied Econometrics, Prescriptive Analysis, Predictive Analysis, Advance Stats for Data Analytics, Database foundations for BA, Cybersecurity Fundamentals, Business Data Warehousing, Data Visualization.

Bachelor's in science, Computer Engineering, PP Savani University, India

Aug 2017 - May 2021

SKILLS

Programming languages / Databases: Python, R, Java, JavaScript, MySQL, PostgreSQL, MongoDB

Machine Learning: Scikit-learn, TensorFlow, Keras, Hypothesis testing, Regression, Classification, Clustering

Data Processing: Pandas, NumPy, SQL

Project Methodologies: Agile, Scrum, Rational Unified Process (RUP)

Tools: PowerBI, Tableau, Qlikview, QlikSense, Balasmiq, Figma, Microsoft word, Microsoft PowerPoint, Visio, Microsoft Excel, AWS, Alteryx

Version Control System: Git, GitHub, BitBucket

PROFESSIONAL EXPERIENCE

Knovator Technologies, (Data Analyst) India

June 2021 - Nov 2022

- **Agile Project Management:** Spearheaded multiple Agile projects, detailing user stories and acceptance criteria, and coordinating sprint planning and retrospectives. Facilitated smooth communication across technical and business teams to ensure alignment and meet project goals.
- **Stakeholder Collaboration:** Acted as the primary liaison between stakeholders, technical teams, and management, providing regular updates, gathering requirements, and ensuring transparency on project milestones, which led to enhanced project outcomes and stakeholder satisfaction.
- **Project Coordination:** Managed project timelines and coordinated resources effectively, leading to a 40% improvement in data processing efficiency. Directed cross-functional efforts, aligning team tasks with Agile methodologies, ensuring consistent project momentum.
- **Data Visualization & Reporting:** Designed and maintained data dashboards using Tableau and Power BI to provide key insights into user engagement and operational metrics, directly supporting data-driven decision-making for healthcare and educational projects.
- **Responsible for detailing out the user stories and acceptance criteria and eventually deciding the user stories.** Drove work efforts, coordinated with business and IT support systems in production and new development work, provided knowledge transfer, and notification across impacted parties.

Tenacious Techies, (Data Analyst and UAT intern) India

Jan 2021 - April 2021

- **Data Orchestration in Agile Environment:** Assisted in Agile project settings to streamline data workflows, collaborating with cross-functional teams to gather requirements, track project progress, and adapt to iterative development cycles.
- **Requirements Analysis and Communication:** Engaged high-level stakeholders through detailed requirement gathering and progress presentations, ensuring client expectations were met and fostering strong, transparent relationships.
- **SQL and Visualization:** Utilized SQL and Python to preprocess, aggregate, and analyze data, creating visually intuitive dashboards tailored to client specifications. Delivered actionable insights that supported strategic objectives and enhanced reporting efficiency.

PROJECTS

User Engagement Prediction Model (Technologies: Python (Scikit-learn, XGBoost), SQL, Tableau)

- Developed a machine learning model to predict user engagement on a digital platform, using historical data on user interactions. The model helped in personalizing content and improving user retention.
- Achieved a high accuracy rate (e.g., 85%) in predicting user engagement, leading to targeted strategies that improved user retention by 15%.

Evaluating the performance of Mercedes Petronas Formula 1 Team (Technologies: Python (Scikit-learn, RandomForest), SQL, Tableau)

- A predictive model for identifying F1 race winners based on historical race data and performance metrics of drivers and constructors. By analyzing past results and using machine learning techniques, the model seeks to accurately predict likely winners and improve strategic insights for race outcomes.

ACTIVITIES AND CERTIFICATION

Living Learning Communities (Student Assistant) University of Texas at Dallas – Leadership in event planning for student engagement. Communicated with management for budget management and assuring the proper execution of planned event.
