

Summary

- Accomplished Business Analyst with over 4+ years of experience in gathering, analyzing, and documenting business requirements, consistently enhancing operational efficiency through strategic and innovative solutions.
- Adept at creating comprehensive Business Requirements Documents (BRD), Functional Requirements Documents (FRD), and System Requirements Specifications (SRS) to accurately translate business needs into detailed technical specifications.
- Expertise in conducting End-to-End Exploratory Data Analysis (EDA) using Python libraries, including Pandas, NumPy, and Matplotlib, to facilitate data-driven decision-making and insights.
- Skilled in data wrangling, cleaning, migration, and visualization using SQL, Power BI, and Tableau, effectively delivering actionable insights to key stakeholders.
- Proficient in using Jira, Confluence, Git, and GitHub for version control, project management, and collaboration in fast-paced, dynamic environments.
- Hands-on experience with cloud platforms, including Microsoft Azure (Azure Data Factory, Azure Databricks) and AWS (Amazon S3, CloudWatch), to support cloud-based data management and analytics initiatives.
- Deep understanding of SDLC processes, including Agile, Scrum, and Waterfall methodologies, ensuring timely project delivery with a focus on quality and efficiency.

|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Languages:        | Python (Pandas, NumPy, Matplotlib) and SQL                                                                                                                                                                        |
| Database:         | MySQL and MS SQL Server                                                                                                                                                                                           |
| Tools:            | Tableau, Power BI, Jira, Confluence, Git, GitHub, and Microsoft Office Suite (Advance Excel)                                                                                                                      |
| Concepts:         | BRD, FRD, SRS, RTM, EDA, Data warehousing, Data mining, Data manipulation, Data cleaning, Data migration, Data wrangling, Data visualization, Data Structure and Algorithms                                       |
| Other Skills:     | Business Requirements, Digital Marketing, UAT/Functional testing, UX Designing, Wireframes, Project management, Market research, Business process mapping, Risk & Stakeholder management, and Communication plan. |
| Methodologies:    | SDLC, Agile, Waterfall, and Scrum                                                                                                                                                                                 |
| Operating System: | Microsoft Windows, and MacOS                                                                                                                                                                                      |
| Cloud Tools:      | MS Azure (Data Factory, Data Bricks), AWS (CloudWatch, S3), Airflow                                                                                                                                               |

Experience

McKinsey & Co.

Business Analyst

| Feb 2024 – Present

- Led the development of comprehensive BRDs, FRDs, and SRS documents to accurately capture business requirements and ensure effective collaboration with technical teams.
- Analyzed complex datasets using Python and SQL, providing insights that helped boost operational efficiency by 25%.
- Managed data migration projects, ensuring the smooth transition of business-critical data from legacy systems to cloud-based solutions using MS Azure and AWS.
- Designed and deployed data visualization dashboards using Tableau and Power BI, empowering stakeholders with real-time insights and data-driven decision-making.
- Managed cross-functional teams using Agile and Scrum methodologies, consistently delivering projects on time and within budget.
- Utilized Jira and Confluence for project tracking, documentation, and collaboration, improving team productivity by 30%.
- Oversaw functional testing (UAT), ensuring all business requirements were met before project deployment, reducing post-release issues by 20%.
- Implemented process improvements based on data analysis, streamlining workflows, and cutting operational costs by 15%.

CueTech Systems, India

Business Analyst

| Jan 2019 – Aug 2022

- Assisted in developing 10+ business process maps and workflows, streamlining operations, and identifying automation opportunities that improved efficiency by 20%.
- Supported the implementation of cloud-based data solutions using AWS services, including CloudWatch and S3, leading to a 25% increase in data processing efficiency and a 15% reduction in infrastructure costs.
- Played a key role in data cleaning and manipulation, ensuring data accuracy and integrity across 95% of datasets, leading to more reliable analysis and reporting.

- Collaborated with senior analysts to design 15+ advanced Excel reports with pivot tables and complex formulas, delivering actionable insights that enhanced management decision-making.
- Participated in UAT sessions, identifying and documenting 90% of defects and ensuring system functionality aligned with business requirements.
- Utilized Jira and Confluence to manage 100% of tasks and documentation, enhancing project transparency and communication across teams.
- Supported data analysis initiatives using Python and SQL, cleaning and manipulating over 500,000 rows of data, delivering visual insights that led to a 30% improvement in decision-making processes.
- Contributed to data migration efforts, ensuring the accurate transfer of legacy data with zero data loss or inconsistencies during system upgrades.
- Assisted in creating Power BI dashboards to visualize large datasets, improving data-driven decision-making by 40% for the team.

## Education

**Master of Information Systems** | Central Michigan University Mount Pleasant, Michigan

**Bachelor of Computer Science and Engineering** | SV Engineering College
