

Namrata Patil

Fremont, CA | 747-836-6332 | namratap.n6@gmail.com | LinkedIn | Github

Data professional skilled in Python, SQL, and Tableau, with a strong foundation in data analysis, visualization, and extracting insights from complex datasets. Experienced in building scalable data pipelines and orchestrated workflows to automate data collection and support advanced analytics.

EDUCATION

Master of Science in Business Analytics

August 2023 – May 2025

California State University, Northridge, CA

Relevant Coursework: Database Management & Warehousing, Data Mining & Predictive Analytics, Marketing Analytics, Supply Chain Analytics, Healthcare Analytics

GPA: 3.97/4.00

Bachelor of Engineering in Civil Engineering

August 2017 – May 2021

BMS College of Engineering, Bengaluru, Karnataka, India

SKILLS

Programming: Python, SQL

Database Systems: MySQL, PostgreSQL, Snowflake, Google BigQuery, MS Access

Cloud & Data Engineering: AWS, Apache Airflow, dbt, Docker

Data Visualization Tools: Tableau, Power BI

Statistics: Hypothesis testing, A / B testing, Causal inference

Microsoft Office: Excel (VLOOKUP, XLOOKUP, Macros, Pivot Tables, VBA), PowerPoint, Word

Other Tools: Git, GitHub, Jira, Confluence, SAP

WORK EXPERIENCE

Data Analyst | California State University, Northridge

May 2025 – Present

- Cleaned and analyzed 106K+ CMS nursing facility records, building predictive models to assess financial health and operational efficiency.
- Synthesized insights from 30+ peer-reviewed studies to evaluate U.S. nursing home performance and investment drivers.
- Created dashboards and reports, and contributed to manuscripts, grant proposals, and weekly progress updates that supported decision-making and team alignment.

Data Research Intern | Indian Institute of Science, Bengaluru, India

July 2022 – Dec. 2022

- Conducted quantitative and qualitative analysis of sustainability-focused construction materials, improving operational planning.
- Developed KPI dashboards to measure performance and enhance research efficiency by 75%.
- Partnered with cross-functional research teams to streamline data collection and reporting.

PROJECTS

Stock Trading Data Pipeline | Python, REST API, MySQL, Docker Compose

- Developed a Python-based application to extract real-time market data from the Polygon.io API, with automated scheduling and pagination handling.
- Designed an ETL workflow to clean, transform, and load stock ticker data into MySQL for structured storage and analysis.
- Utilized Git/GitHub for version control and automation scripts, ensuring reproducibility and streamlined workflow management.

AKI Risk Prediction Model Using MIMIC-III Data | Google BigQuery, Python

- Processed 53K+ EHR records using BigQuery/Python, applying KNN imputation and SMOTE to improve data quality and balance.
- Applied LASSO feature selection and logistic regression, visualized with a nomogram to highlight top AKI risk factors and enhance interpretability for clinical decision-making.

Weather Data Pipeline with Apache Airflow | Apache Airflow, Docker Compose, PostgreSQL, OpenWeatherMap API

- Designed and deployed a robust ETL pipeline using Airflow and Docker to automate weather data ingestion from the OpenWeatherMap API every 3 hours across multiple cities.
- Engineered scalable time-series storage in PostgreSQL to support real-time trend monitoring, forecasting models, and data-driven decision-making.

Flight Assignment Optimization for Southwest Airlines | Python, Microsoft Excel

- Predicted June 2025 flight supply, demand, and route delays across 45 origin-destination pairs using historical data and time series models, selecting the best performing approach for each route.
- Built a Linear Programming model to optimize Southwest Airlines' point-to-point flight assignments, reducing total predicted delay by over 64,000 minutes while meeting supply, demand, and route constraints using Excel Solver.
