

# PREM ALGETI

[premalgeti99@gmail.com](mailto:premalgeti99@gmail.com) | +1 (614)-585-6195 | [LinkedIn](#)

## PROFESSIONAL SUMMARY

Full Stack Java Developer with 4+ years of experience in Java and J2EE development with a focus on building scalable n-tier applications using Java, Spring Boot, Spring MVC, Spring Data JPA, Hibernate and Spring Security. Proficient in implementing CI/CD pipelines with Jenkins, GitHub, Jira and Docker for seamless automation of build, test and deployment processes. Strong expertise in core Java concepts such as Multi-Threading, Exception Handling, Generics and Collections along with experience in testing frameworks like JUnit and Mockito. Adept in cloud solutions with AWS, Agile (SCRUM) methodologies and front-end development with React. Focused on leveraging technical expertise to drive innovation, ensure reliability and contribute to organizational growth.

## TECHNICAL SKILLS

|                                      |                                                                                                                                                                                                                 |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages:</b>        | Java (v8, v11, v17), J2EE, JavaScript, Python, C++, C#, Scala, PL/SQL                                                                                                                                           |
| <b>Frameworks:</b>                   | Spring, Spring Boot, Hibernate, Struts                                                                                                                                                                          |
| <b>Web Technologies:</b>             | HTML, CSS, JavaScript, React, Angular, jQuery                                                                                                                                                                   |
| <b>Databases:</b>                    | MySQL, RDBMS, Oracle, Cassandra, MongoDB, Elastic Search                                                                                                                                                        |
| <b>Web Services</b>                  | RESTful APIs, SOAP APIs, Microservices, Service-Oriented Architecture (SOA)                                                                                                                                     |
| <b>Cloud Platform:</b>               | Amazon Web Services (AWS) and Microsoft Azure                                                                                                                                                                   |
| <b>Tools:</b>                        | GitHub, Jira, Docker, Kubernetes, Maven, ANT, Postman, Apache Tomcat, Kafka, Jaspersoft Studio, Oracle WebLogic, WebSphere, IntelliJ IDEA, Visual Studio Code, MS Office Suite, VolPay 2.x and Volante Designer |
| <b>Concepts &amp; Methodologies:</b> | Algorithms (DAA), Data Structures, Software Development Life Cycle (SDLC), Agile and Scrum                                                                                                                      |
| <b>Operating Systems:</b>            | Windows, MacOS and Linux                                                                                                                                                                                        |

## EDUCATION

### Master of Science in Information Technology

(Jan 2023 – Apr 2024)

University of Cincinnati, Cincinnati, OH

## CERTIFICATIONS

### AWS Certified Developer - Associate

## EXPERIENCE

### PNC

(Dec 2023 – Till Date)

#### Role: Full Stack Java Developer

- Collaborated with Business Analysts to transform business requirements into detailed technical specifications ensuring alignment with project goals.
- Developed and deployed J2EE web applications using WAR and JAR files ensuring runtime integrity and dependency management.
- Implemented an internal security model using Spring Security and Spring Boot Microservices ensuring compliance with organizational security policies.
- Designed and deployed highly available, scalable applications using AWS services such as EC2, S3, RDS, Lambda and API Gateway ensuring optimal performance and uptime.
- Developed automation scripts for deployment, data processing and monitoring.
- Utilized version control with GIT and tracked issues using JIRA for efficient bug resolution and change management.
- Implemented logging and debugging strategies using log4j, improving the reliability of codebases.
- Strengthened cloud security by implementing IAM policies, encryption and VPC configurations for secure data transfer, storage and network isolation.
- Designed and implemented RESTful and GraphQL APIs using Django and Flask for seamless system integration.
- Integrated Redis for caching and session storage, enhancing system responsiveness and reducing database load.
- Developed web applications using NodeJS, implementing client-server architecture for efficient two-way communication and data exchange.
- Optimized React applications through advanced techniques such as code splitting and lazy loading improving performance and reducing page load times.

- Worked extensively with Docker, managing containers, container snapshots and images while integrating CI/CD pipelines to streamline development and deployment processes.

## **Volante Technologies**

**(Jan 2020 – Dec 2022)**

### **Role: Software Developer**

- Participated in two-week Agile sprints, performing tasks such as requirement gathering, technical design, prototyping, estimation, code enhancement and technical documentation.
- Designed and implemented a system for registering business debit cards with custom layouts, automated parsing, debugging and data validation, increasing efficiency by 35% and reducing errors by 25%.
- Demonstrated expertise in banking applications with in-depth knowledge of payment formats such as ISO 20022, ACH, Nacha and SWIFT.
- Implement logging and monitoring solutions using ELK stack, Prometheus and Grafana for system observability.
- Design event-driven architectures using message brokers like Kafka and RabbitMQ for real-time data processing.
- Developed and deployed machine learning models using TensorFlow, PyTorch or Scikit-Learn.
- Utilized AWS to create and configure EC2 instances, write custom policies and deploy applications on Elastic Beanstalk and EC2.
- Built various frontend screens with React integrating Redux libraries for state management and enhancing UI functionality.
- Developed parsing, validation and transformation functionalities for NACHA-M files, initiating preprocessing REST services.
- Automated infrastructure deployment with AWS CloudFormation and Terraform ensuring consistency and efficiency across environments.
- Built and optimized data processing pipelines, leveraging ETL frameworks and distributed computing solutions.
- Conducted data analysis on over 1 million payment records using JDBC, MySQL, Apache Spark and Apache Hive, driving data-driven decision-making and boosting performance by 30%.
- Designed and implemented microservices-based RESTful APIs with NodeJS, achieving a 20% improvement in system scalability.
- Optimized process scheduling and execution by implementing time-based workflows using Apache Camel schedulers.
- Optimized application reliability and scalability using Elastic Load Balancing, Auto Scaling and advanced monitoring with AWS CloudWatch including custom metrics and alarms.
- Built Single Page Applications (SPA) using React employing data binding and server synchronization for seamless user experiences.
- Tested REST APIs in Spring Controller using Postman and created RESTful web services with JSON objects using Spring Boot.
- Performed rigorous code reviews, reducing bugs by 30% and accelerating product delivery by 20%.
- Secured APIs through OAuth2.0 token-based authentication/authorization using Spring Security.
- Worked with dependent application teams to integrate changes and coordinated with QA teams to resolve defects effectively.

## **PERSONAL PROJECTS**

### **Crop Data Management System**

- Developed a Android mobile app and a web application to enable farmers to monitor pesticide usage per crop and track annual pesticide expenses.
- Integrated features like automated reminders for timely pesticide dosing and an intuitive user interface for improved usability and productivity.

### **Fraud Detection in Banking Transactions**

- Developed a fraud detection system using Machine Learning techniques leveraging Kaggle datasets, employing Gradient Boosting and Random Forest algorithms to analyze fraudulent patterns.
- Achieved 99.73% accuracy by optimizing model sensitivity and addressing class imbalance, enhancing precision in detecting fraudulent transactions.
- Designed a real-time solution to strengthen financial security and reduce false negatives through advanced data analysis and ensemble methods.
