

Naga Poojitha

✉ nagapoojitha699@gmail.com ☎ 937-972-5339 📍 Indianapolis, IN, USA in LinkedIn

Summary

Experienced in Data Analytics with 3+ years in designing and optimizing data processing solutions, proficient in Python with a focus on MySQL and PostgreSQL database management. Strong understanding in Statistical analysis, data wrangling, data exploration, and employing Machine Learning techniques such as Clustering, Classification, Regression, SVM, Random Forest, and Gradient Boosting. Skilled in AWS cloud integration, scripting, and automation, expert in version control with Git, leading code reviews. Proficient in developing different types of Tableau Reports, working at the data model to fit Tableau needs and discovering. Proactively embraces emerging technologies, contributing to streamlined workflows and operational efficiency.

Skills

Languages: Python, R, Java, Scala, SQL, MATLAB

Big Data Tools: Hadoop, HDFS, MapReduce, Hive, Sqoop, Oozie, EMR, Spark, Pig, lambda functions

Frameworks & Tools: NumPy, Pandas, PySpark, Power BI, Tableau, Git, GitHub, MS Excel, MS Access, Airflow, ETL, Jira, Agile/Scrum, Jenkins, Docker.

Datastores and Cloud: Amazon Web Services (AWS), Azure, MySQL, Oracle, MongoDB, Teradata, PostgreSQL, Apache Kafka, Snowflake, Data Bricks

Database Tools: SQL Query Management Studio (SSMS), SQL Server Query Editor, SQL Server Data Tools (SSDT)

Professional Experience

Data Analyst, State of Indiana (IDHS)

02/2024 – present | Indianapolis, USA

- Hands on experience using trailhead salesforce and worked on custom objects, fields and page layouts to tailor Salesforce to the requirements of the business.
- Involved in Phase 1 development Data Migrating from Public Safety portal website to Salesforce.
- Worked on data migration activities, ensuring accuracy and completeness of data transferred between systems. Developed and deployed a real-time inspection summary dashboard in Tableau, integrating live Salesforce data and utilizing R scripts for data cleaning and preprocessing.
- Customized dashboards with advanced filters, parameters, calculated fields, and tooltips to enhance user-specific views and interactivity.
- Collaborated with Inspectors and Fire Marshals to gather data and define requirements for dashboard development.
- Involved in developing Department of Fire and Building Safety (DFBS) web application using HTML, CSS and JavaScript.
- Implemented front-end improvements in a DFBS project, with tools like HTML, CSS3/SCSS, Bootstrap, and JavaScript, resulting in a more modern and user-friendly website design.
- Tested the Salesforce records in Code Enforcement which migrated from which Public Safety Portal.

Data Engineer, Intellect Business Solutions.

10/2022 – 12/2023 | Remote, USA

- Involved Designed and implemented ETL pipelines using Apache Kafka for real-time data ingestion, integrating diverse data sources into PostgreSQL databases to optimize performance, scalability and data integrity.
- Performed Data Cleansing and applied transformations using Databricks and spark analysis.
- Skilled in optimizing Snowflake queries and data pipelines for improved performance and efficiency, utilizing features such as clustering, partitioning, and query caching.
- Proficient in utilizing AWS services, including Amazon S3 (Simple Storage Service), EC2 (Elastic Compute Cloud), Lambda, and EMR (Elastic MapReduce), to architect scalable and reliable cloud solutions.
- Hands-on experience in configuring and optimizing AWS EMR clusters for big data processing tasks, including data ingestion, transformation, and analysis.
- Created and maintained SSRS (SQL Server Reporting Services) reports and dashboards to visualize data stored in Teradata, providing actionable insights to stakeholders and decision-makers.
- Skilled in designing and implementing database objects such as tables, views, stored procedures, and functions using T-SQL.
- Developed and maintained SQL queries, triggers, and stored procedures in PostgreSQL for data validation, quality checks, and audit trail creation within ETL pipelines, ensuring dataset accuracy and completeness.

- Optimized data warehousing using Apache Hadoop and Spark, establishing efficient data lakes for structured and unstructured data. Implemented advanced partitioning and clustering techniques for enhanced dataset retrieval.
- Implemented reporting processes by developing weekly and monthly reports with advanced visualizations using Tableau, significantly improving query performance and dashboard rendering efficiency.
- Communicated complex technical concepts and insights effectively to both technical and non-technical stakeholders, facilitating informed decision-making based on data-driven insights.

Data Engineer, Caliber Technologies

08/2019 – 06/2021 | Hyderabad, India

- Architected and developed Tableau dashboards to deliver actionable insights to executive stakeholders, leveraging advanced data visualization techniques for trend analysis and strategic decision-making.
- Engineered scalable data pipelines using Python, Apache Spark, and AWS Glue to process and integrate over 100 terabytes of retail data from heterogeneous sources, achieving a 30% reduction in ETL processing time.
- Applied Pandas and NumPy for data analysis, collaborating with retail analysts to extract critical metrics and enhance dashboard accuracy by 15%.
- Validated change requests and made appropriate recommendations, standardized the implementation of data.
- Responsible for Data Modeling based on the client requirements, daily maintenance, and performance tuning.
- Proficient in creating interactive and customizable visualizations in Grafana, including graphs, charts, and tables, to present monitoring data in a clear and actionable manner for end-users.
- Experienced in web development using Python frameworks such as Django or Flask to build dynamic and responsive web applications.
- Designed and implemented automated data workflows and pipelines using Azure Databricks notebooks, jobs, and scheduling features, streamlining data processing and analysis tasks.
- Implemented efficient data integration workflows using SQL Server Integration Services (SSIS) and SQL Server Management Studio (SSMS) to consolidate and transform sales data from multiple sources into a unified repository.
- Utilized AWS services like Amazon S3 for scalable data storage and Amazon EMR for distributed data processing, achieving a 25% reduction in cloud infrastructure costs while managing an increase in data volume.
- Implemented Git for version control to manage ETL processes and database schema changes across multiple branches, reducing code conflicts by 40% and ensuring robust versioning practices.

Education

Master of Computer science	University of Dayton	Dayton, Ohio, USA
Bachelor of Electronics and Communication	VR Siddhartha Engineering College	India
