Education

Clemson University - Clemson, SC

GPA: 3.96/4.00

Master of Science in Computer Science

Dec 2025

Relevant Coursework: Applied Data Science, Machine Learning, Deep Learning, Statistics, AI-Receptive Software Development, DBMS, Cloud Computing

Skills / Certificates

Data & Analytics: Python (Pandas, Data Cleaning, EDA), SQL, Power BI, Tableau, Excel, Data Modeling

ETL & Databases: SSIS, KingswaySoft, Azure Data Factory, ETL Development, SQL Server (SSMS), Oracle, MySQL

Cloud Platforms: AWS, Google Cloud Platform (GCP), Microsoft Power Platform

Programming: Java, JavaScript, HTML/CSS, Linux (Basic)

Certifications: Google Cloud Associate Engineer ; Microsoft Dynamics 365 Fundamentals (CRM); ServiceNow CSA

Work Experience

Clemson University

Aug 2024 – Dec 2025

Graduate Teaching Assistant

Clemson, SC

- Led technical labs for 75 students in Computational Thinking and AI Software Development, achieving 92% on-time project completion by guiding structured Python-based problem-solving and data workflows
- Developed a Python-based autograding system to process student submissions and generate structured CSV reports, reducing manual grading effort by 70% while improving accuracy and consistency
- Analyzed submission trends to identify recurring errors and provided targeted feedback, strengthening students' algorithmic thinking, debugging skills, and code reliability

Ernst & Young LLP (EY)

Jun 2022 – Nov 2023

Data Analyst

Hyderabad, TG

- Built model-driven applications and automated workflows within Microsoft Dynamics 365, reducing manual effort by 40% and improving overall team efficiency. Designed business rules and reporting solutions to support accurate data capture and enable informed, data-driven decision-making for leadership
- Implemented role-based access controls to ensure compliance and secure management of sensitive child welfare data. Collaborated with engineering and business stakeholders to improve system interoperability and streamline data integration. Enabled secure, reliable data access to support analytics initiatives and accelerate project delivery.
- Validated and reconciled large relational datasets across source, staging, and target systems for 5+ core business entities, ensuring data integrity and consistency throughout the ETL lifecycle

Cognizant

Jan 2022 – Jun 2022

Programmer Analyst Intern

Hyderabad, TG

- Applied full-stack development (Java, Spring Boot, SQL, Bootstrap, .Net) in an enterprise environment similar to .NET frameworks, delivering client-ready project modules with integrated backend, frontend, and database systems
- Mentored peers during training by sharing best practices, reviewing code, and supporting project integration, fostering collaboration and successful delivery

Projects

CART GO — Power BI Dashboard

Apr 2025 – May 2025

- Designed an interactive Power BI dashboard using the CART GO retail dataset to analyze key KPIs, including Total Sales, Average Revenue, Customer Ratings, and product performance
- Implemented dynamic field parameters, custom DAX measures, and diverse visual types such as Donut, Bar, Line, and Funnel charts for flexible, insight-driven metric exploration
- Enhanced user interaction with advanced slicers, custom filter actions, drill-through views, and a polished layout to support clear and effective data-driven decision-making

DC Child Welfare

Jan 2023 – May 2023

- Migrated and transformed over 1M Oracle legacy records into Dynamics 365 CE using SSIS, SQL Server, and a multi-phase ETL pipeline with structured schema mapping, cleansing, and validation
- Increased data accuracy and consistency by more than 94 percent through enforced business rules, data enrichment, and systematic quality checks prior to loading
- Integrated Power BI reporting with Dynamics 365 CE to enhance data visibility and enable faster, more informed decision-making across child welfare operations
