EXPERIENCE

Data Scientist

Jan. 2024 – Aug. 2024

[Taelor](#) (Fashion E-Commerce startup)

Hayward, CA

- Developed dbt models and transformations to build **ELT pipelines** in **BigQuery** data warehouse.
- Collaborated with cross-functional teams, including marketing, product, and engineering, to configure website tracking in **Google Analytics** and Google Tag Manager. Analyzed traffic flow and user funnel to identify opportunities for conversion rate optimization.
- Designed and maintained weekly dashboards in **Looker Studio** to monitor social media performance.

R&D Data Scientist

Sep. 2021 – Jun. 2023

[Sonova USA Inc.](#) (Medical Device / Healthcare)

Fremont, CA

- Automated weekly reporting by creating interactive **Tableau** dashboards to visualize core business KPIs, enabling data-driven decision-making for 10+ internal and external stakeholders.
- Conducted end-to-end data analysis on side effect patterns using **SQL** and **Python** on 1 million electronic health records (EHR) from **Salesforce** CRM Analytics, providing product improvement suggestions to engineers and resulting in a 20% increase in subscriptions.
- Collaborated cross-functionally to support design iteration by building **statistics** metrics to evaluate clinical studies and compare with benchmarks. Communicated findings to non-technical audiences.
- Streamlined data processing with a **data pipeline** to automate data acquisition, **data cleaning**, and integration, reducing manual processing time by 80% and improving operational efficiency.
- Detected and prevented fraud by assigning a risk score for each subscription through training an **XGBoost** model, safeguarding the company from potential losses.
- Identified critical information from voluminous clinical notes by applying natural language processing (**NLP**) techniques to extract meaningful topics, increasing the efficiency of human interpretations.

Data Scientist

Feb. 2021 – Aug. 2021

Pacific Gas and Electric Company (PG&E)

San Francisco, CA

- Prioritized inspections to proactively mitigate asset failure by predicting power outages through training a **Random Forest** model on an imbalanced dataset with 80% balanced accuracy in **Python**.
- Conducted **feature engineering** on a dataset with over 300k records by decomposing categorical attributes, enhancing the accuracy of the predictive model by 10%.
- Leveraged complex **SQL** queries to aggregate data from multiple sources, resulting in an enriched dataset for further analysis.

Data Engineer

Sep. 2020 – Aug. 2021

[SF CityWatch](#)

San Francisco, CA

- Led a 7-member team to develop a dynamic website featuring a daily updated crime map and interactive dashboards. Drove the entire lifecycle of the product, from ideation to implementation.
- Developed an **ETL pipeline** between **AWS** S3 bucket and RDS using **Python** and **SQL**.
- Increased user engagement by enhancing the front-end design through **A/B testing**.

EDUCATION

M.S. in Computer Science, Sofia University; GPA: 3.96/4

Expected 2026

M.S. in Data Science, University of San Francisco; GPA: 3.8/4

Aug. 2021

B.A. in Communication, University of Colorado Denver; GPA: 3.95/4

May 2018

SKILLS

- Programming: Python (Pandas, NumPy, Scikit-Learn, PyTorch, Matplotlib, Statsmodels, SciPy, spaCy, NLTK, Keras, TensorFlow, Plotly), Shell Scripting (bash, zsh), Apache Spark, SAS, R
- Database: Relational Database (PostgreSQL, MySQL, SQL Server), NoSQL (MongoDB),
- Technology: AWS (S3, Sagemaker, Redshift, EC2, EMR, RDS), GCP, Tableau, Power BI, Looker Studio, Git/Github, dbt, RESTful API, IBM, Salesforce, Excel, Confluence, Jira
- Web Development: Flask, HTML, CSS, JavaScript, Jinja2, Bootstrap, Docker, Heroku, React
