EDUCATION

Master of Science in Computer Science - Northeastern University, United States	Sept 2021 – Dec 2023
Bachelor of Science in Computer Science - Ocean University of China, China	Sept 2016 – Jun 2020
<i>Awards: Scholarship for Academic Excellence, Special Prize Scholarship for Outstanding Technological Achievements</i>	

TECHNICAL BACKGROUND

Programming Languages	Java, Kotlin, Python, C/C++, XML, HTML, PHP, CSS, TypeScript, JavaScript, Perl, MATLAB
Technologies	Android Studio, Git, MySQL, SQL, Django, Jira, Linux, Eclipse, IntelliJ, Firebase, Godot, Spring, REST API, Maven, Angular, JSON, Apache Tomcat, Agile Scrum principles
Certifications	Hewlett Packard certified Software Engineer

EMPLOYMENT HISTORY

Mobile Application Teaching Assistant – Northeastern University, USA	Jan – Dec 2023, Jan – Jul 2022
➤ Taught graduate students Mobile Application classes including Android Studio, Java, Kotlin, Firestore , GitHub, and OOP	
• Assisted students in configuring Android Studio and GitHub	
• Guided students in building a responsive and user-friendly UI with XML and Google Material	
• Debugged students' projects to diagnose programming and environment configuring errors	

Research Apprentice – Northeastern University, USA	Jan 2023 – Sept 2023
➤ Designed the UI of the Container Stowage Game and implemented it using the Godot game engine and GScript coding	

Web Application Developer – United Parcel Service, USA	Jul 2022 – Dec 2022
➤ Worked as part of the WWDT (Worldwide Delivery Times) Team as a Java Backend Developer	
• Modified the API to enhance efficiency and productivity for both WWDT and VIBE applications using Java and Maven	
• Successfully implemented optimizations and streamlined processes, resulting in a notable 17% reduction in time costs	
• Developed a Perl script to analyze the log of API calls, enabling our team to promptly address and resolve any unusual activities	
• Completed the assignments one week ahead of the deadline	
• Contributed to the comprehensive documentation of the legacy code, ensuring a thorough understanding of future maintenance	
• Actively participated in all team Scrum meetings, contributing to ensuring that the project were on Agile principle	
• Used Jira for task management, bug reports, and to check in daily progress	

Software Engineer - Web Full-stack Developer – Ying-Tong, China	Jul 2019 – Aug 2021
➤ Developed a comprehensive Company Management System using Java, MySQL, Apache Tomcat , and PHP	
• Crafted a PHP -powered, responsive, and categorized interface, fostering seamless user for the front-end	
• Employed Java and Eclipse for the back end and enhanced code maintainability, ensuring robust and scalable functionality	
• Enabled real-time interaction by integrating MySQL for instant updates	
• Improved system efficiency through optimized database queries minimizing response times	
• Utilized GitHub for version control	
• Established a dual-role system , empowering "Admin" users with comprehensive system management capabilities	

DEVELOPMENT PROJECTS

BidMobility Website	Sept 2023 – Dec 2023
Demo: https://www.youtube.com/watch?v=k4eRxZh_lOI&t=292s&ab_channel=Z_loves_Study	
➤ Built a Python Django phone bidding website, with MySQL and Google Cloud for data storage, and HTML for the front-end	
• Implemented an advanced chat box using the OpenAI API , converting natural language into SQL queries to boost user interaction	
• Provided profile viewing, empowering users to make informed decisions based on the reputation and ratings of others.	
• Enabled user messaging for bidding item discussions and facilitated contact with admin for item-related issues	
• Successfully deployed the website	

Happy Diary App	Sep 2021 – Dec 2021
Demo: https://www.youtube.com/watch?v=wTf7oMY_frI&ab_channel=Z_loves_Study	
➤ Developed Happy Diary, a journal app using Java in Android Studio to help users record their daily life	
• Integrated Firestore backend services to facilitate real-time data updates, user authentication, and crash reporting, resulting in enhanced app reliability and user insights	
• Categorized text by allowing users to define keywords and choose favorite tags in order to avoid recalling bad memories	
• Offered a personalized user styles function to maximize customization for a unique user experience
