

ABHILASH SINGH BHARATPUR

Buffalo, New York • +1 716 630 9591 • bharatpurabhilashsingh@gmail.com • [Linkedin](#)

EDUCATION

State University of New York at Buffalo, USA Master of Data Science	2023 – 2024
JNTUH, India Bachelor of Computer Science	2014 – 2018

SKILLS & OTHER

Cloud Technologies & Big Data Tools: AWS (EMR, EC2, S3, CloudWatch, Event Bridge, Redshift, Glue, Athena, Lambda, Elasticsearch Service, Step Function, Glue, Serverless Architectures, Data Migration, Pipeline Design), Hadoop, HDFS, Sqoop, Hbase, Hive, MapReduce, Spark, Kafka, Oozie

Database Management & ETL Processes: PostgreSQL, MS SQL Server, MySQL, Cassandra, DynamoDB, Apache Spark, Apache Kafka

Programming & Scripting Languages: SQL, R, Python, Scala

Modeling & Data Warehousing & Reporting: ER Studio, Star and Snowflake-Schema Modeling, FACT and Dimension Tables, Pivot Tables, Snowflake, Tableau, PowerBI

Development Methodologies: Agile, Scrum, Waterfall

Data Processing & Governance: PySpark, Batch Processing, Stream Processing, Data Standards, Policies, Data Quality Metrics, Data Validation Techniques

Interpersonal Skills: Cross-functional Team Collaboration, Time Management, Adaptability, Leadership, Effective Communication

WORK EXPERIENCE

Data Engineer Citi Group, Hyderabad, India	May 2021 – Jan 2023
- Optimized AWS Glue ETL workflows, reducing data processing time by 30% and lowering costs, while managing 100+ TB of data. - Led machine learning initiatives on AWS, integrating S3 with Snowflake to build a scalable cloud-based data warehousing solution. - Boosted data throughput by 40% via streamlined real-time processing with Spark, Kafka, and AWS for enhanced predictive analytics. - Automated data pipelines with Apache Airflow and AWS Step Functions, achieving a 50% improvement in reliability. - Increased data migration efficiency from S3 to Snowflake by optimizing Spark configurations for both batch and streaming data. - Developed dynamic data models in PySpark, optimizing SQL queries to improve data retrieval speed by 25% in Snowflake. - Managed AWS EMR clusters, utilizing Git for version control to streamline cloud data engineering workflows and enhance team collaboration.	
Data Engineer HSBC, Hyderabad, India	Feb 2019 – Apr 2021
- Enhanced data processing and integration capabilities by optimizing ADF ETL workflows for handling large-scale datasets. - Spearheaded the integration into Azure services, utilizing Azure Data Factory and Databricks to increase processing speeds by 30%. - Created data architectures on Azure, achieving a 25% enhancement in performance and cost efficiency using Azure Data Factory - Scripted transformations in Python to efficiently manage diverse data formats, increasing data handling performance by 40%. - Designed resilient data handling environments on Azure, focusing on performance and scalability for voluminous datasets. - Utilized Amazon S3 for secure, scalable data storage, implementing best practices in data lifecycle management. - Orchestrated data workflows with Apache Airflow, achieving efficient job scheduling in a distributed computing environment.	
Data Analyst HSBC, Hyderabad, India	Jun 2018 – Feb 2019
- Leveraged advanced SQL techniques and Python for data cleaning, significantly improving data quality for subsequent analysis. - Crafted SQL queries including multiple views and Common Table Expressions (CTEs) to streamline data extraction for BI reporting. - Designed Power BI dashboards focusing on key metrics to provide actionable insights for strategic business decision-making. - Configured Power BI alerts to monitor metrics, ensuring immediate response to changes, such as a drop in dashboard views. - Collaborated on SSIS ETL processes, elevating data integrity and efficiency, which led to a 20% reduction in processing errors. - Documented BI solutions and data integrations in Power BI, enhancing knowledge sharing and collaborative decision-making within the team.
