

MAREO S. YAPP

EDUCATION

BSc in Computer Science
Florida International University
09/2017 – 05/2020

TOOLS AND SKILLS

Oracle Certified Associate

Programming – 3yrs:

- Java 8

Web development – 2yrs:

- Angular Typescript 4.9
- HTML, CSS

Frameworks – 2yrs:

- Spring Boot, Junit, Mockito
- Rest, JSON, Spring MVC

Development Tools – 2yrs:

- Postman, Swagger
- Jenkins

Database – 2yr:

- PostgreSQL, Hibernate
- DBeaver, AWS RDS

Knowledge of:

- Flux, Mono, Java Reactive

SUMMARY

Java developer specializing in full stack development utilizing Java 8, JUnit, Spring Boot in the backend and Angular Typescript, CSS, and HTML in the frontend. Participated in four programming projects so far. Three of which have been in a team setting that used an agile framework to deliver on sprint deadlines.

WORK EXPERIENCE

Infosys Ltd – Senior Associate 03/2021 – 03/2023

- Promoted to senior associate after one year as an associate.

BNSF Modernization Project – Full Stack Developer

- Worked to modernize a railway company's old cobalt system using Java 8, Angular Typescript and Spring Boot Starter Web.
- Built Rest API's using Spring Rest to retrieve CRUD commands and return JSON responses from database.
- Created web page design and Rest API calls with Angular Typescript, CSS, and HTML.
- Developed backend classes and methods with Java 8.
- Tested the functionality of the front and backend methods using Swagger and JUnit respectively.
- **Key achievement:** Devised a method in backend to organize and display a list of employee schedules by name, date, and position on the frontend in a calendar format.

Revature – Software Developer 10/2020 – 03/2021

Caliber Staging Module – Backend and Test Developer

- Worked on microservice to manage assignment of associates to a particular manager, to balance workload.
- Technologies used Java 8, Spring Boot, Hibernate, Junit, Mockito.
- Made use of JpaRepository methods and NativeSQL to retrieve all associates assigned to a particular manager.

Expense Reimbursement System – Java Full Stack Developer

- Created full stack application to process reimbursements for employee expenses.
- The front-end view used HTML and JavaScript to make the application call to server-side components.
- The back-end system used Hibernate to connect to an AWS RDS Postgres database.
- Utilized JUnit to test the functionality of more than 75% of all backend methods.
- **Key achievement:** Creation of a JavaScript method to convert JSON timestamp into user readable format.
