Professional Summary

- Accomplished and detail-oriented Java Full Stack Developer with 5+ years of experience designing, developing, and deploying scalable, high-performance enterprise and cloud applications across banking, manufacturing, and technology sectors.
- Experienced across the full software development lifecycle — requirements gathering, system design, implementation, testing, deployment, and production support.
- Proficient in Java 8/11, Spring Boot, Spring MVC, Spring Microservices, Hibernate, Struts 2, ReactJS, AngularJS, Node.js, Redux, and jQuery UI for full-stack development.
- Skilled in front-end technologies: HTML5, CSS3/Less, Bootstrap, JSTL, XSL, and client-side validations for responsive UI development.
- Expertise in building microservices architectures, creating RESTful APIs, and migrating legacy systems into modular, cloud-ready components.
- Hands-on experience with AWS (Lambda, Kinesis, CloudFormation), Docker, Kubernetes, and Pivotal Cloud Foundry to deploy and manage containerized and serverless environments.
- Strong background in Oracle R12, Oracle Forms/Reports, SQL, PL/SQL, stored procedures, and triggers to improve data integrity, performance, and reporting.
- Experienced in integrating third-party APIs, internal security models, role-based access control, and caching strategies to enhance functionality and reliability.
- Adept at DevOps and Agile practices, including CI/CD pipelines with Jenkins, version control with Git/SVN, and automated build tools like Gulp and Webpack/Babel.
- Proficient in writing comprehensive unit and integration tests using JUnit, Mockito, React Testing Library, Mocha, Jasmine, Karma, Chai, Selenium WebDriver, and Cucumber (BDD) to ensure code quality and minimize production issues.
- Recognized for strong problem-solving, collaboration, and communication skills, working closely with cross-functional teams, product owners, and QA to deliver high-quality solutions on schedule.
- Experienced in knowledge transfer, documentation, and mentoring junior team members to build stronger teams and ensure smooth onboarding.
- Skilled at leveraging modern Java features such as Lambda expressions, Streams, and Time APIs to write efficient, maintainable code.

Lowes

Java Full Stack Developer

Charlotte NC, USA

06/2024 – Present

- Made use of React JS to build Bootstrap components for responsive UI objects and linked with API data to view and render the virtual DOM dynamically.
- Responsible for the overall layout design and prototype using React JS with Redux library, jQuery UI, and CSS/Less and HTML5.
- Implemented Node JS as a server-side proxy for an event-driven, non-blocking I/O model to make the application lightweight and efficient.
- Extensively worked in writing minimal code in building re-usable forms with their validations using REACT with Redux Architecture.
- Good knowledge of Lambda expressions, Time APIs, and Java 8 core features
- Optimized cleaning up of session-level Data Structure shared across different open tabs when data is flushed/committed from one of the tabs.
- Implemented Struts encouraging application architecture based on the Model View Controller (MVC) design pattern and Struts 2 framework for front-end development and presentation logic.
- Developed JavaScript for all client-side validations and developed GUI using CSS, JSTL, and XSL.
- Apply focused development changes across oracle databases and see the changes applied through the life cycle of environments and testing into production via internal deployment tool.

- Define requirements and specifications for Development using Oracle R12, Oracle Forms, Oracle Reports and SQL.
- Web pack module bundler and Babel JavaScript compiler are used accompanying React JS.
- Created custom reusable Angular components and libraries to reduce code duplication and improve development efficiency.
- Implemented Spring Boot to create a CRUD back-end for our React-frontend application.
- Worked with Jenkins Continuous Integration and Continuous Deployment (CI/CD).
- Experience in Docker Engine and Docker Machine environment, to deploy micro services-oriented environments for scalable applications.
- JUnit is implemented along with Mockito to perform unit testing on our RESTful web application.
- DevOps role converting existing AWS infrastructure to Server-less architecture (AWS Lambda, Kinesis) deployed via CloudFormation.
- Dockerized Spring Boot application to Pivotal Cloud Foundry PAAS (Platform as a service).
- Worked with container-based application deployments using Docker with Kubernetes.
- Experience integrating the internal security model into new projects with Spring Batch, Spring Microservices and Spring Boot, Pivotal Cloud Foundry, and Netflix Eureka.
- Performed Unit testing on ReactJS applications using Karma and Jasmine tools and worked with the Gulp tool to build automation.
- Performed Unit testing on applications using tools Mocha to test Reactjs and Chai for Node.js.
- Experience in integration testing tools like Selenium Web Driver, Cucumber (Behavior Driven Development testing).

Environment: Java 8, ReactJS, Redux, Node.js, Struts 2, Spring Boot, Spring Batch, Spring Microservices, Oracle R12, Oracle Forms/Reports, Oracle DB, HTML5, CSS3, JavaScript, jQuery, JSTL, XSL, Webpack, Babel, Docker, Kubernetes, Jenkins, AWS (Lambda, Kinesis, CloudFormation), Pivotal Cloud Foundry, Netflix Eureka, JUnit, Mockito, Karma, Jasmine, Mocha, Chai, Selenium WebDriver, Cucumber, Git.

Tata Consultancy Services | DuPont
Full Stack Java Developer

Telangana, India
 10/2021 – 07/2023

Project: Contributed to the development of web applications supporting DuPont's business operations, including order management, customer engagement, and data-driven reporting

- Developed RESTful APIs using Java, Spring Boot, and Hibernate to handle order processing, product catalog, and user management.
- Built front-end features with ReactJS and AngularJS, including interactive dashboards, search functionality, and form validations for customer-facing modules.
- Optimized database interactions by writing SQL queries, stored procedures, and triggers in Oracle, reducing query execution time and improving report generation.
- Collaborated on migrating legacy components into microservices, ensuring better scalability and modularity across the platform.
- Integrated third-party APIs (payment services, shipment tracking) with backend services to extend business functionality.
- Improved application performance by implementing caching strategies, API response optimization, and lazy loading in UI, reducing page load times significantly.
- Wrote unit and integration tests using JUnit and React Testing Library, improving code quality and reducing production issues.
- Participated in Agile ceremonies (sprint planning, retrospectives, daily stand-ups) and worked closely with product owners and QA teams to deliver features on schedule.
- Utilized AWS S3 for static content hosting and secure storage, integrated with Angular frontend applications.
- Supported CI/CD pipelines using Jenkins and maintained code repositories in Git, ensuring smooth deployments and collaborative development.
- Conducted code reviews for peers to maintain coding standards and improve team collaboration.
- Assisted in troubleshooting and resolving production issues, reducing downtime and improving system reliability.
- Implemented role-based access control for application modules to ensure secure access and data privacy.

- Collaborated with QA teams to design test cases, ensuring features met functional requirements and quality standards.
- Documented API specifications, workflows, and system design to support knowledge sharing and future maintenance.
- Participated in knowledge transfer sessions for onboarding new team members and sharing best practices.

Environment: Java, Spring Boot, Hibernate, REST APIs, ReactJS, AngularJS, Oracle DB, SQL, HTML5, CSS3, JavaScript, Microservices, Jenkins, Git, JUnit, React Testing Library, Agile/Scrum.

InnoVisitors
Java Developer

Andhra Pradesh, India
05/2019 – 10/2021

- Assist in the design and development of validation services to ensure data accuracy and integrity.
- Develop and maintain business objects using POJOs and implement data access layers with Hibernate.
- Support the implementation of Spring IOC for module interconnection and dependency injection.
- Help in building Single Page Applications (SPA) using ReactJS under senior developer guidance.
- Contribute to the development of microservices with Spring Boot and Spring REST.
- Write and maintain unit test cases using JUnit to ensure functionality and reliability.
- Assist in AWS infrastructure migration tasks, such as moving from Elastic Beanstalk to Docker with Kubernetes.
- Participate in creating .NET console applications for ETL tasks (under supervision).
- Learn and utilize Apache Kafka for reliable messaging services.
- Support the development of RESTful web services using Jersey and JAX-RS.
- Developed and maintained dynamic, single-page applications (SPA) using Angular with reusable components, directives, and services.
- Work on Java Servlets, JSPs, AJAX, XML, HTML, and CSS for web component development.
- Follow Agile (Scrum) methodology and actively participate in stand-up meetings and sprint planning.
- Collaborate with senior developers and business users to understand requirements and design solutions.
- Assist in building and maintaining Node.js applications with Express.js, MongoDB, AWS, and Docker.
- Help document and test RESTful APIs with Swagger and Postman.
- Monitor and support AWS services using Amazon CloudWatch.
- Use Git, SVN, and Jenkins for version control and deployment processes.
- Apply Java 8/11 features like Lambda expressions, Streams, and new APIs to improve code performance.
- Assist in consuming Web Services using GraphQL API for data exchange.
- Work with XML and JSON request/response data.
- Write basic SQL queries, stored procedures, and triggers in Oracle and DB2.

Environment: Java 8/11, Spring Boot, Spring REST, Hibernate, ReactJS, Node.js, Express.js, MongoDB, JSP, Servlets, AJAX, HTML, CSS, XML, JSON, JAX-RS, Jersey, Oracle, DB2, AWS (Elastic Beanstalk, Docker, Kubernetes, CloudWatch), Apache Kafka, .NET, Swagger, Postman, Git, SVN, Jenkins, Agile/Scrum, GraphQL, JUnit.
