

Ashana Agarwal

Data scientist

✉ ashnaagrwal00@gmail.com ☎ 09057228886 📍 Jaipur, India

🌐 www.linkedin.com/in/ashana-agarwal-a161b42a0 🐙 github.com/ashana123

Profile

Self-driven, motivated individual who is seeking a data scientist role is capable of solving complex data problems and can extract meaningful insights from a data that can help in improving the businesses grow at a higher rate and can help them understanding the customer better.

Education

Bachelor of Technology in Computer Science, Manipal University Jaipur Sep 2022 – Oct 2026

Professional Experience

Zidio Development Jul 2024 – Aug 2024
Data Science and analytics intern Remote

- Scrapped raw data from the IMDB movie website using Beautiful Soup in Python and converted the data into a structured tabular format
- Preprocessed the structured data by removing null values and insignificant columns from our dataset
- Built a content-based personalized recommender system that recommends movies based on the user's preferences and taste
- Deployed it on Streamlit by creating a frontend for the users so that they can navigate properly

Projects

MARKET BASKET ANALYSIS USING APRIORI ALGORITHM

Identifies the most frequently bought items together from a sales dataset

Technologies used - pandas, numpy, matplotlib, mlxtend.frequent_patterns, jupyter notebook,

- Data Cleaning and Data preparation done through pandas removed missing values, encoded strings combined customer id and date to create invoice id
- Data Visualization done through matplotlib in order to identify the most as well as the least important item as well as to understand which day of the week has the highest sales of which particular item
- Model Selection and evaluation using apriori algorithm on the crosstab of invoice id and item with and used lift as metrics along with sorting values through lift, confidence and support

NETFLIX STOCK PRICE PREDICTION

Analyse the past stock prices of Netflix to predict its future price

Technologies used - numpy, pandas, statsmodels, matplotlib, seaborn, jupyter notebook

- Data Cleaning and pre-processing - dropped missing values through pandas and created target column through closing price
- Data Visualization - created scattered plots, bar-charts, box-plots to understand mean, mode, median, trend, seasonality and stationarity

- Model Implementaion and evaluation - after introducing stationarity through decomposition several time-series models such as moving average,Exponential Smoothing,ARIMA,SARIMAX were implemented and evaluted through RMSE

Skills

Programming language

Python and SQL

Maths ,Statistics and Probability

Machine learning algorithms

Supervised and unsupervised learning

Database Management System

MySQL and MongoDB

Bigdata

PySpark and Hadoop

NLP and deep learning

Soft skills

Analytical Thinking , Problem Solving and
Time Management

Courses

Data Scientist and analyst Bootcamp ,Upgrad

Aug 2023 – Feb 2024
