SUMMARY

As a master's graduate and an experienced Java Full stack developer with 3+ years of experience in Rest APIs, Web Technologies, and Micro Services. I have largely worked on creating Rest Services and improving frameworks, knowledge in writing pipeline scripts for CI/CD tasks and performance scripts for financial domains, ability to understand new technologies from the bottom up. Expertise in designing and developing Restful web services for Core Java/J2EE applications, specifically for multi-tier distributed systems. Bring considerable knowledge of cloud services, notably Amazon Web Services (AWS) and Azure to the table. Results-driven Full-Stack Developer with expertise in designing, developing, and deploying scalable, high performance applications. Proficient in building RESTful APIs and Microservices using Java, Spring Boot, Hibernate, and Spring Cloud for distributed systems. Strong expertise in Spring Framework components such as IoC, MVC, AOP, Security, and ORM, ensuring modular and maintainable applications. Hands-on experience in Test-Driven Development (TDD) and Behavior-Driven Development (BDD) using JUnit, Mockito, and Cucumber for high-quality code. Skilled in frontend development with modern frameworks like Angular, React, and Vue. Experienced in building responsive, dynamic, and cross-browser compatible UI/UX using Bootstrap, Tailwind CSS and Material UI. Strong background in Relational (MySQL, PostgreSQL, SQL Server) and NoSQL databases (MongoDB, DynamoDB, Redis) for efficient data storage and retrieval. Expertise in Cloud Computing and DevOps practices, deploying applications on AWS (EC2, S3, Lambda, RDS, ECS, EKS) and using Terraform for infrastructure automation. Proficient in containerization and orchestration using Docker, Kubernetes, and managing images in Docker Hub and AWS ECR. Hands-on experience in CI/CD pipeline automation using Git, GitHub Actions, Jenkins, Groovy, and SonarQube for seamless deployment and quality assurance. Strong knowledge of authentication and security protocols such as OAuth2, JWT, LDAP, and SAML to secure applications. Experienced in design patterns like Singleton, Factory, and Observer, ensuring clean and reusable code architecture. Well-versed in Agile (Scrum) and Waterfall software development methodologies with experience in Sprint Planning, Stand-ups, and Retrospectives. Proficient in API documentation and testing using Postman, Swagger, and OpenAPI. Excellent skills in Unified Modeling Language (UML), creating Use Case, Class, and Sequence diagrams for software design. Passionate problem-solver, self-motivated, and goal-oriented team player with strong analytical and debugging skills. Excellent communication, leadership, and collaboration skills, ensuring effective teamwork in cross-functional environments.

EXPERIENCE

Full Stack Java Developer

Alphaetra

Oct 2023 - Mar 2024, United States

- Designed and developed scalable, high-performance microservices for managing student and course data using Java, Spring Boot, Hibernate ORM, and MySQL.
- Implemented RESTful APIs for full CRUD operations, including Create, Read (single and all), Update, and Delete using industry best practices.
- Developed the persistence layer with Hibernate ORM, utilizing POJOs and Hibernate annotations to map Java objects to database tables.
- Leveraged Spring IOC (Inversion of Control) for efficient bean management and Hibernate Session Factory integration, ensuring seamless dependency injection.
- Applied Spring AOP (Aspect-Oriented Programming) to enhance the application's modularity and improve transaction management and cross-cutting concerns.
- Utilized Swagger to provide interactive documentation for REST APIs, enhancing the developer experience with automatic API testing and exploration.
- Conducted comprehensive API testing using Postman to validate endpoint functionality and ensure smooth integration.
- Used MySQL as the relational database for data storage and implemented efficient database operations with optimized SQL queries.
- Containerized microservices using Docker, ensuring portable and consistent environments across different development stages and deployments.
- Configured Maven POM (Project Object Model) for seamless unit and integration testing with a focus on Test Driven Development (TDD).
- Wrote extensive JUnit test cases to validate individual components of the application before functional implementation, ensuring code quality and stability.
- Engineered distributed architecture for microservices, leveraging Spring Cloud for service discovery and load balancing, resulting in 30% improved system scalability within 6 months.
- Integrated JavaMail API to enable email notifications for CRUD operations, enhancing communication efficiency and user engagement across the microservice architecture.
- Enhanced email notification system using JavaMail API, implementing automated alerts for course updates, achieving 95% delivery rate over 12 months.

Full Stack Java Developer

Komhar Infotech Private Limited

Jun 2022 - Jul 2023, Hyderabad, India

- Designed and implemented software functionality to gather and process customer data, emphasizing code optimization, maintainability, and organization to improve system performance.
- Actively participated in the full Software Development Life Cycle (SDLC), including requirements analysis, software development, and providing post-production support.
- Contributed as a Full Stack Developer in Java, collaborating with cross-functional teams and utilizing Agile methodology for iterative development and continuous feedback.

- Developed Agent microservice using Java, Spring Framework, Hibernate, and SQL Server, ensuring high performance and scalability.
- Engaged directly with clients to define business requirements, offer development estimations, and propose strategies for software enhancement and optimization.
- Designed and developed intuitive GUI screens and implemented complex business logic utilizing Java, HTML/CSS, Spring Boot, and SQL to improve user experience and system functionality.
- Used Swagger to document REST APIs, providing clear and comprehensive API documentation for ease of use and integration.
- Automated manual data processing by developing and deploying complex SQL stored procedures to efficiently retrieve and manipulate data across multiple tables.
- Ensured cross-browser compatibility and adherence to web standards by creating responsive CSS-based layouts.
- Employed JDBC for seamless data manipulation and integration with the System database server to support application functionality.
- Designed and implemented logical and physical data models using normalization techniques to ensure database integrity and optimize performance.
- Delivered detailed design documentation, including UML case, class, and sequence diagrams to effectively communicate system architecture and flow.
- Conducted unit, functional, and integration testing to ensure software quality, and participated in 24x7 on-call and on-site support for production issues and deployment..

Full Stack Java Developer

Evernorth

Mar 2024 - Present, United States

- Involved in the full software development lifecycle, including requirement gathering, design, implementation, testing, deployment, and maintenance using Agile Scrum methodology.
- Developed and documented RESTful Microservices using Java, Spring Boot, Hibernate, JSON, JWT, and MongoDB, ensuring scalability and maintainability.
- Designed and implemented Single Page Applications (SPA) with Angular 6, HTML5, CSS3, and Bootstrap, enhancing user experience and responsiveness.
- Containerized and deployed Microservices and frontend applications using Docker and AWS Elastic Container Service (ECS) for seamless orchestration.
- Built and optimized CI/CD pipelines with Git, Jenkins, Groovy, Docker, AWS ECR, and AWS ECS, streamlining automation and deployment.
- Developed and executed unit tests using JUnit and Mockito, alongside integration testing with Postman and Newman, improving application reliability.
- Implemented static code analysis and code coverage with SonarQube
- Secured application configurations and secrets using AWS SSM Parameter Store, managing environment specific settings efficiently..
- Engineered encryption mechanisms using PGP for securing sensitive data transmission, leveraging GnuPG and ensuring compliance with organizational security protocols.
- Optimized integration performance tuning for microservices interfacing with AWS and third-party APIs, reducing latency by 30% through efficient resource allocation and concurrency management over 6 months.
- Engineered XML Schemas for data validation in RESTful APIs, ensuring compliance with industry standards and reducing data interchange errors by 25% over 4 months

EDUCATION

Bachelor, Information Technology

Vasireddy Venkatadri Institute of Technology, Guntur, India • India • Apr - Apr 2023 • 7.8

Masters, computer science

Texas Tech University, Lubbock, United States • United States • Apr - Apr 2023 • 3.4

SKILLS

Frameworks & Technologies: Spring Boot, RESTful Web Services, Angular (8+), React, J2EE Technologies

Databases: Oracle 12/11g, MySQL, MongoDB, SQL Server, Snowflake

Cloud Services: AWS (S3, EC2, EBS, ELB, IAM, Cloud Watch), SSM Parameter Store

Development Tools: Eclipse, IntelliJ, Docker & Docker Hub, Jenkins, SonarQube

Programming Languages: Java 1.8, Python, JavaScript
