Summary

Software Developer with around 5 years of experience in designing and developing applications and microservices. Proficient in application development using TypeScript, React and React Native on front-end; and Java, Spring Boot for backend & RESTful APIs. Extensively worked on cloud platforms, like AWS and Azure to build and manage computing, storage, and deployments resources. Experience with CI/CD tools like Cloudbees, GitHub Actions, Jenkins, containerizing and orchestration through Docker & Kubernetes. Ability to collaborate with cross functional teams, for requirement gathering & solution design.

Technical Skills

Development	:	Java, TypeScript, Spring Boot, Hibernate React, React Native, Maven, Microservices, PostgreSQL, Junit
DevOps / Tools	:	AWS, Docker, Jenkins, Kubernetes, NPM, Apigee, ESLint, Git

Professional Experience

Senior Software Engineer, Blue Cross Blue Shield of Massachusetts

May 2023 – Present

- Developed brand new mobile application for iOS & Android using TypeScript, Java, React Native, Spring Boot and AngularJS for BCBS of MA.
- Spearheaded new application microservice development using Java, Spring Boot and PostgreSQL. Implemented Eureka for service registry and dynamic service discovery, Hystrix as CircuitBreaker. Integrated swagger to document. Used Apigee for proxying and session state.
- Deployed application using Cloudbees Jenkins for CI/CD operations and managing application builds.
- Implemented asynchronous actions in React Native to manage application state using React-Redux, to store and dispatch actions updating the state; and used rxjs and Axios for API interactions. Used React hooks and built custom hooks for component lifecycle management.
- Managed application permissions to properly handle
- Developed and maintained library of reusable core application components like navigation components, accordions, input and selection fields, notifications, banners, and icons, achieving coherence in design language reducing development & testing time by 30%.
- Developed styling sheets to reflect designs from UX team, using Figma to capture design specifications and built React Native components to conform to UX designs.
- Developed test suites to programmatically ensure correctness of application functionality.
- Extensively used Flipper and Hermes Debugger to profile application performance, debug the application by analyzing redux state, stylesheet, and network calls, improved load time by 3 secs.
- Built Cloudbees for CI/CD pipeline, to manage iOS and Android builds and submit builds to be distributed to the end-user, through Jfrog, AppCenter and Test Fairy. Used Git for version control.

Environment: TypeScript, React Native, Java, Spring Boot, ES6, Hibernate, NodeJS, rxjs, React-Redux, React Hooks, React Navigation, React Thunk, JSX, PostgreSQL, Axios, Babel, Angular, GraphQL, XCode, Flipper, VSCode, Git, Fastlane, App Center, Jenkins, Apigee, GitHub Actions.

Senior Software Engineer, Tredence Inc.

Nov 2019 – Aug 2021

- Developed eCommerce management platform for Kimberly Clark using Java, Spring Boot, and React microservices impacting \$2M in revenue.
- Owned one and developed 3 major microservices to handle product inventory, retail sales across 5 major chains preventing 15% lost sales.
- Developed frontend web application using ReactJS and React-Redux.
- Led the development of RESTful APIs using Java, Spring Boot and Hibernate. Developed ETL flows to fetch data from relational database to Azure. Extensively used Apache Spark and Python for transformations.
- Extensively used TypeScript and ESLint to enforce type safety for props, route parameters and interfaces, implement object-oriented components in NodeJS backend and React and React Native web mobile applications.
- Managed microservice deployments through efficient CI/CD pipelines built using Docker and Azure Kubernetes Services (AKS).

Environment: TypeScript, React, Java, Spring Boot, REST, Microservices, Redux, Axios, rxjs, ESLint, Azure, Docker, Kubernetes, Jest, Swagger, Git.

Software Engineer, Mu Sigma

Jan 2018 – Nov 2019

- Spearheaded development of promotion management application. Developed and deployed RESTful APIs on AWS using EC2, S3.
- Developed clean and robust front-end using TypeScript and React with statically typed reusable and configurable components and interfaces used across the application.
- Setup data warehouse and developed schemas & stored procedures to manage application data using DynamoDB. Integrated with application backend using Hibernate. Managed deployments using Docker and Kubernetes.

Environment: Java, Spring Boot, ReactJS, TypeScript, microservices, JSX, TypeScript, Docker, AWS, Kubernetes, Git, Agile.

Projects

- **Distributed Computing:** Created a client-server program in C to sort array concurrently. Developed quorum-based mutual exclusion in Java using modified Maekawa's algorithm among clients in a distributed system of 7 servers and 5 clients in Java emulating core functions of OS.
- **Memory management and Process Scheduling for SimOS:** Implemented demand paging & memory loading for a simulated Operating System in C/C++, using aging vector for page replacement. Implemented multi-level (4) feedback queues for scheduling processes.

Education

Master of Science in Computer Science, *The University of Texas at Dallas*

May 2023
