

Eswara Chandra Kumar Borra

DevOps/ Cloud Engineer

7639135988

Borraeswar875@gmail

Overall **5+ years** of IT experience as a DevOps Engineer, which includes detailed technical knowledge and experience of Build Engineering and Configuration Management processes, tools and best practices. Extensive hands-on experience in the creation of robust, flexible, automated solutions for Build and Deployment processes and Environment Management across the Financial, Broadcast and Media Sectors.

PROFILE SUMMARY

Certified **Azure/DevOps Engineer** with **5+ years** of experience with in-depth knowledge in supporting, automating, and optimizing mission critical deployments in **Azure** and **AWS** leveraging configuration management, **CI/CD**, and **DevOps processes**. Expertise in architecting and implementing azure services, such as network services like **Azure CDN, Express Route, Azure DNS, virtual network, traffic manager, load balancer, VPN Gateway**, storage services like a **data lake, blob storage, queue storage, file storage, table storage**. Also has experience on web and mobile services like **azure search, logic apps, web apps, mobile apps**. Security and identity services like **azure active directory, Azure AD B2C, Azure security center**. Monitoring and managing services like **azure advisor, network watcher, azure resource manager**. Creating amazon **EC2** instances and maintaining with security groups. Architecting of **Elastic Load Balancers** with **EC2 Auto Scaling** groups. Maintaining volumes and mapping with **multi-AZ VPC instances**. Expert in Installation, Configuration and Administration of **Windows, Ubuntu Linux, Cent OS** and **RedHat Environments**. Mid level of understanding and using various **Puppet** features including Resource management (**Package, Service, File**), User Management, **Modules, Class, Definition, Templates, Factor** and **external commands**. Worked on deployment automation of all the micro services to pull image from the private **Docker registry** and deploy to **Docker swarm cluster** using **Ansible**. Unique experience with **Pivotal Cloud Foundry** and **OpenShift/Kubernetes** architecture and design, troubleshooting issues with **platform components (PCF)**, and developing global/multi-regional deployment models and patterns for large scale developments/deployments on **Cloud Foundry** and **Open Shift/Kubernetes**. Experience in assigning the **azure services** on locations specific to integrate with web-apps and key-vaults. Experience in setting up **CI/CD pipeline** integrating various tools with **Jenkins** to build and run **Terraform** jobs to create infrastructure in **AWS**

TECHNICAL SKILLS

Cloud Platforms:	Azure, AWS, GCP
Infrastructure Provisioning Tools:	Terraform, Azure Resource Manager, Cloud Formation
Configuration Management Tools:	Ansible, Chef, Puppet
CI/CD Tools:	Jenkins, Bamboo, Azure Pipelines, Gitlab Pipelines
Build Tools:	Maven, ANT, Gradle
Containerization & Orchestration:	Docker, Kubernetes, OpenShift, Mesos
Logging & Monitoring Tools:	Nagios, Splunk, ELK, Data Dog, Dynatrace, Prometheus, Grafana, New Relic Azure Service Health, Azure Network Monitor.
Scripting & Programming Languages:	Python, PowerShell, Bash/Shell, JavaScript, Perl, ASP.Net, VBScript, Ruby, C, PHP, Java/J2EE.
Embedded Systems & Tools:	Wind River, VxWorks, Yocto Project, RTOS, Embedded Linux
Operating Systems:	Linux (Ubuntu, CentOS, RedHat), Windows, Unix
Databases:	Data Lake, Data Bricks, Cosmos DB Oracle 10g/11g/12c, DB2, MySQL, MongoDB, DynamoDB
Cassandra Application / Web Servers:	Apache Tomcat, NGINX, IIS, JBoss4.1, WebSphere, Web Logic, 9.x/10.x, Gerrit.
Virtualization Platforms:	Oracle VirtualBox, VMware Workstation, Vagrant, VMware, vSphere ESXi 5.x/4.X, ESX /3.x, Hyper-V.
Bug Tracking Tools:	JIRA, Bugzilla, Remedy, HP Quality Center, IBM Clear Quest, Mingle, VersionOne.

EDUCATION

Concordia University, Minnesota, USA

- Masters/ Computer Science (2023 - 2024)

WORK HISTORY

Optum

Eden Prairie, Minnesota, USA

Azure DevOps Engineer

Jul 2024 – Dec 2024

Optum, Inc. is an American healthcare company that provides technology services, pharmacy care services and various direct healthcare services. I implemented and maintained CI/CD pipelines to automate the build, test, and deployment processes for applications and services, ensuring rapid and reliable delivery of software updates.

Responsibilities:

- Analyzing the **landmark** of 150 subscriptions for various business cases to apply organization specific **security guidelines**
- Gathering the requirements from the clients about the existing applications to apply the **security measures**
- Understand the latest features like (**Azure DevOps, OMS, NSG Rules**, etc...) introduced by **Microsoft Azure** and utilized it for existing business applications. Creating, validating and reviewing solutions and effort estimate of converting existing workloads from classic to **ARM based Azure Cloud Environment**
- Developed automation system using **PowerShell scripts** and **JSON** templates to remediate the **Azure services**
- Created builds and release pipelines in **VSTS** and done deployments using **SPN** (secure endpoint connection) for implementing **CI/CD**. Implemented automation for deployments by using **YAML scripts** for massive builds and releases
- Managed **Ansible Playbooks** with **Ansible** roles. Used file module in Ansible playbook to copy and remove files on remote systems. Worked on **GIT** to maintain source code in **Git** and **GitHub repositories**
- Used **Kubernetes** during debugging. Leading up to production when multiple application build must be tested for stability.
- Provided high availability for **IaaS VMs** and **PaaS** role instances for access from other services in the **VNet** with **Azure Internal Load Balancer**. Integrated with Team City and Octopus for the continuous integration and continuous delivery. The development is incremental, once the changes are checked-in to **TFS**, the daily build runs, executes the unit test cases and deploys the changes on **CI** environment. Handle escalated Support tickets till closure for **MS Azure PaaS platform**. Configured **AD connect** to configure federation with on-premises **ADFS** and **Azure AD**. Experience is using **Microsoft Azure**
- Developed **strategic** solutions to enhance system architecture and align with long-term business goals.
- Created and maintained **scalable** applications and services to handle increasing workloads efficiently.
- Implemented automated testing frameworks using **Selenium** and **Playwright** for end-to-end and regression testing.
- Enhanced existing automated Build/Deploy process and architect the next generation centralized deployment processes using **Octopus**. Automated and tested the Build and deployment of the **CRM** product on **Smoke, DEV** Environment using **power shell** and **Octopus tool**. Create a **Virtual Network** on **Windows Azure** to connect all the servers.
- Had integrated with **Team City** and **Octopus** for the continuous integration and continuous delivery. The development is incremental, once the changes are checked-in to **TFS**, the daily build runs, executes the unit test cases and deploys the changes on **CI environment**. Implemented Branching and Merging concepts **TFS 2012** and **GIT**. Accomplished tasks of client **SCM team** and worked on the migration of existing code repository from **ClearCase** multisite to **TFS**.
- Provisioned **EC2 instances**, configured auto scaling and defining cloud formation **JSON** templates using **Ansible** modules.
- Administrated and Implemented **TFS**, Maintained and Migrated **TFS&TFS 2012\2013 support**.
- Designed a robust future state Ingestion Framework solution leveraging **Azure Data Factory, Azure SQL database & Data warehouse**. Worked in highly collaborative operations team to stream line the process of implementing security Confidential **Azure** cloud environment and introduced best practices for remediation
- Designed, wrote and maintained systems in **Python** scripting for administering **GIT**, by using **Jenkins** as a full cycle **continuous delivery tool** involving package creation, distribution, and deployment onto Tomcat application servers via shell scripts embedded into **Jenkins** jobs.

Environment: .Net, Azure, PowerShell, XL Release, XL Deploy, Kubernetes, Kafka, GIT, Python, AWS, Redis, VMware, Jenkins, Terraform, Ansible, SVN, Puppet, Open Stack, Docker, Jira, Maven, VSTS, Apache Tomcat Application Server, Salt stack, TFS, ADFS, CRM, MS Azure PaaS platform, Azure AD, GIT, power shell, ClearCase, EC2 instances, Ansible, SCM team

3M		AWS DevOps Engineer
Saint Paul, Minnesota, USA		Dec 2023 - Jun 2024

3M Company is an American multinational conglomerate operating in the fields of industry, worker safety, and consumer goods. I designed, developed, and maintained the infrastructure as code (IaC) solutions using tools such as Terraform, Ansible, or similar technologies to automate the provisioning and configuration of cloud-based infrastructure.

Responsibilities:

- **DevOps Workflow** representing all stages starting from **SCM Commit Build**, Integration Build Which Compiles **Code**, **JUnit** Test cases and Code Coverage, Build and Bundle, Publish with Lead Approvals and Deployment of Artifacts.
- Create and configure **Jenkins** server using **Terraform** and **Ansible**. Use of **Docker**, **Kubernetes** and **Open Shift** to manage micro services for development of **continuous integration and continuous delivery**
- Launching **Amazon EC2 Cloud** Instances using **Amazon Web Services (Linux/ Ubuntu/RHEL)** and Configuring launched instances with respect to specific applications. Implemented **AWS Code Pipeline** and created **Cloud formation JSON** templates in **Terraform** for **(IAC)** infrastructure as code. Configured and maintained the **AWS Lambda** function to trigger an action when there is a **Jenkins** build, which internally gets stored on **AWS S3 bucket** for everybody to access. Created **Route53** to route traffic between different regions and worked with Security groups and **Network ACLs**.
- Designed **AWS Cloud Formation** templates to create custom sized **VPC**, **subnets**, **NAT** to ensure successful deployment of Web applications and database templates, **Cloud Watch**, **Cloud Trail** and **Cloud front** to setup and manage the cached content delivery. Scheduled, deployed, and managed Container Replicas onto a node cluster using **Kubernetes**. Implemented Prometheus and **Grafana** for storing and visualizing the data.
- Built and monitored **APIs** using **Datadog** to ensure performance, availability, and rapid issue resolution.
- Contributed to **full stack** development with a focus on maintainability, writing **less** CSS and enforcing quality checks through **gate** mechanisms in CI/CD pipelines.
- Performed configuration, deployment, and support of cloud services including **Amazon Web Services**. Performing the hardening of **AWS** root account after requisition. Strong experience in maintaining repositories in the **Bitbucket** for the services developed and set up automated testing and deployments using **Jenkins**.
- Used **Jenkins pipelines** to drive all microservices builds out to the **Docker registry** and then deployed to **Kubernetes**, created **Pods**, and managed using **Kubernetes**. Used **Gradle** as a build tool automating the building, testing, publishing and deployment loading all the dependencies from the artifact repository.
- Installed application on **AWS EC2** instances and configured the storage on **S3 buckets**.
- Managed **IAM policies**, providing access to different **AWS** resources, design and refine the workflows used to grant access.
- Worked with **git** to maintain code, deploy code through **Travis** and **Terraform** to **Amazon Web Services** via Dies.
- Implemented **AWS solutions** using **EC2**, **S3**, **RDS**, **EBS**, **Elastic Load Balancer**, **Auto scaling groups**.
- Responsible for Design of different Release Environments for new projects and monitoring.
- Implementing a **Continuous Delivery framework** using **Jenkins**, **Chef**, **TeamCity** in **Linux** environment.
- Managed **Chef Cookbooks** to automate system operations. **AWS Cloud** management and **Chef Automation**.
- Integration of **Maven/Nexus**, **Jenkins**, **RunDeck**, **Urban Code Deploy with Patterns/Release**, **Git**, **Confluence**, **JIRA** and **Cloud Foundry**. Using **Jenkins AWS Code Deploy** plugin to deploy to **AWS**.
- Responsible for code build, release and configuration on **Amazon EC2**. Optimized volumes and **EC2 instances**. Created **multi-AZ VPC instances**. Used **IAM** to create new accounts, roles and groups.

Environment: Amazon Web Services (AWS), Azure, Octopus, IAM, S3, EC2, VPC, cloud watch, Nix, Azure, ANT, Maven, Tortoise SVN, GitHub, Chef, Puppet, AWS, BitBucket, Jenkins, Gradle, Kubernetes, Docker, Terraform, Ansible, Dynatrace, shell Scripting, Linux.

(TCS) Toronto-Dominion Bank		DevOps Engineer
Hyderabad, India		Jan 2022 - Jul 2023

Toronto-Dominion Bank (TD) is a Canadian multinational banking and financial services corporation that offers a wide range of financial products and services. I worked with version control systems such as Git for managing code repositories and facilitating collaboration among development teams.

Responsibilities:

- Managed servers on the Confidential **Azure Platform, Azure Virtual Machines** instances using **Ansible** Configuration Management. Created **Ansible** manifests, profiles and roles modules to automate system operations.
- Used **Terraform** to reliably version and create infrastructure on **Azure**. Created resources, using **Azure Terraform** modules, and automated infrastructure management. Configuration Automation and Centralized Management with **Ansible** and **Cobbler**. Implemented **Ansible** to manage existing servers and automate the build/configuration of new servers.
- Experience with **Open Shift, Kubernetes** architecture and design, troubleshooting issues with platform components **Azure**, and developing global or multi-regional deployment models and patterns for large-scale developments and deployments on **Cloud Foundry, OpenShift** and **Kubernetes**. Installing and configuring the applications like docker tool and **Kubernetes** for the orchestration purpose. Managed **Kubernetes** charts using **Helm** and created reproducible builds of the **Kubernetes** applications, managed **Kubernetes** manifest files and managed releases of **Helm packages**.
- Created complex **JIRA** workflows including project workflows, screen schemes, permission scheme and notification schemes in **JIRA**. Created additional **Docker** Slave Nodes for **Jenkins** using custom **Docker** Images and worked on all major components of **Docker** like **Docker Daemon, Hub, Images, Registry, Swarm**.
- Worked on App Containerization technology **Docker**, creating **Docker** images, Containers, **Docker Registry** to store images, cloud-based registry **Docker Hub, Docker Swarm** to manage containers. Virtualized the servers using the **Docker** for the test environments and dev-environments needs and configuration automation using Docker containers

Environment: Azure, Ansible, Terraform, Cloud Foundry, Docker, Kubernetes, Jira, Cobbler, Azure Virtual Machines

Electronic Arts Inc.
Hyderabad, India

| **Cloud Engineer**
| **Mar 2019 - Dec 2021**

Electronic Arts Inc. (EA) is an American video game company. Automated infrastructure provisioning, scaling, and maintenance using tools like Terraform, Ansible, or Puppet.

Responsibilities:

- Managed end user accounts, permissions, access rights, and storage allocations in accordance with best-practices.
- Provided Consultation for Troubleshooting in **Virtualization, SAN Configuration, Active Directory** group policy design & Implementation and **ESXi Distributed vSwitch Network Configuration**
- Provided Technical Recommendations for Installation and Implementation of **Virtual Environments** in Industrial Plants. Identified Administrative Standards, Issues and Process Improvements. Created new **VM templates** for several **Operating Systems** with all the recommended and required settings for optimum performance and efficiency.
- Created resource pools and **VM** folders as required and allocated the memory reservations and **CPU** shares based on the business requirements and **VM** performance. Design, development, and implementation of **Cloud solutions**.
- Demonstrated proficiency in **Network Administration** in large data center environment - **DNS/DHCP, Load Balancing (F5 Networks, AWS ELB), Firewalls (Cisco Systems, Juniper Networks), IDS/IPS, IPSEC VPN**
- In-depth knowledge of and experience implementing dynamic **IP** routing protocols (**BGP, OSPF, EIGRP, MPLS**)
- Participate in the software development life cycle to ensure sound **Cloud solutions** are implemented. Work with application and architecture teams to conduct proof of concept (**POC**) and implement the design in production environment in **AWS**
- Proficient with deployment and management of **AWS services - including but not limited to: VPC, Route 53, ELB, EBS, EC2, S3 O Automation scripting ability (Bash/Shell, Python)**
- Enterprise scale networks within **cloud** environment delivering **SaaS solutions**
- Manage multiple projects simultaneously can adapt to changing business needs
- Work well with cross functional global and remote teams
- Network health monitoring tools (**Cloud Watch, Solar Winds, Logic Monitor**)
- Work with our current application teams to understand our current applications and make **migration** recommendations and to-be architectures in **AWS**

Environment: Virtualization, SAN Configuration, Active Directory, VM, BGP, OSPF, EIGRP, MPLS, DNS/DHCP, Load Balancing (F5 Networks, AWS ELB), Firewalls (Cisco Systems, Juniper Networks), IDS/IPS, IPSEC VPN
