Technical Skills

- Python
- C++
- C#
- Java
- Linux
- .NET
- SQL
- React
- Software Testing
- Web Scraping
- Microsoft Office
 - Word, Excel, PowerPoint

Soft Skills

- Critical Thinking
- Communication
- Teamwork
- Detail Oriented
- Adaptability
- Creativity
- Work Ethic
- Problem Solving
- Leadership
- Time Management
- Agile/Scrum

Relevant Coursework

- Project in Artificial Intelligence
- Next Generation Search Systems
- Data Structure Implementation and Analysis
- Software Testing, Analysis, and Quality Assurance
- Design and Analysis of Algorithms
- Machine Learning and Data Mining
- Principles in System Design

Profile

University of California, Irvine (UCI) graduate with a double major in Computer Science and Computer Game Science. Internship experience with creating programs involving data structures and APIs under real world constraints. Ability to work with an emphasis on efficiency and iteration as well as being responsible and resourceful.

Education

- University of California, Irvine 09/2019 – 06/2023
3.813 GPA
B. S. in Computer Science, Computer Game Science
- Archbishop Mitty High School 08/2015 – 05/2019
4.35 GPA
CSF and NHS Honors
Department Excellence award

Work Experience

UCI Beall Applied Innovations – ECG Team Senior Developer 09/2021 – 06/2023

- Successfully led backend development for a principal investigator (PI) search engine used to bridge the gap between UCI's cutting-edge research and local Irvine industries.
- Successfully completed a large-scale web scraping project that gathers and processes publicly available UCI PI information, then structures and stores it in an SQL database.
- Ability to quickly adapt and learn new technical skills and tools as needed, successfully contributed to a front-end project requiring React, Node.js, and CSS within a month.
- Received first-hand experience with the software development life cycle, particularly in design, implementation, maintenance, and testing.
- Highly proficient at working with and iterating upon legacy code with an emphasis on abstraction.
- Designed and implemented a minimal API in .NET using Dapper and SQL.

KTBYTE – Computer Science Instructor 07/2020 – 12/2020

- Developed and taught a computer science class for students to be able to read and write Java fluently and establish a solid foundation for their future exploits.
- Independently developed the curriculum, producing sets of lesson plans and notes.
- Taught middle school students with a historic passing rate of 100%, students displaying the ability to successfully utilize loops and functions in large scale projects.

Cratus Technology – Software Engineer Intern 06/2020 – 09/2020

- Independently coded a demo model of the ASSET-Rx product to illustrate the product's capabilities of tracking assets through a LPWAN service, producing a model that the company uses for marketing and customer demonstrations.
- Collaborated with another intern to create a machine learning algorithm for a sensor to generate predicted data sets given information of a controlled environment, which will be implemented in a product being released the following year.
- Worked with a project manager to ensure that the models followed the specifications provided while enhancing performance and user experience.
