SUMMARY

Proactive Full Stack Software Development Engineer with 5+ years of experience in Agile environments. Skilled in Java Spring Boot, ReactJS and Angular. Built and deployed 10+ microservices on AWS, reduced latency by 53%, cloud infrastructure (20% cost reduction), improved scalability by 3x at prior roles, focusing on backend optimization, API security (OAuth2, JWT), CI/CD and testing. Passionate about building seamless, fast, and intuitive digital experiences, with a keen focus on improving performance.

TECHNICAL SKILLS

Java/J2EE Technologies: Servlets, JSP, JSTL, JDBC, JMS, JNDI, RMI, EJB, JFC, Swing, AWT, Applets, Multi-threading, Java Networking

Programming Languages: Java, Python, JavaScript, TypeScript, C++, Scala

Application/Web Servers: WebLogic, JBoss, Tomcat

IDEs: Eclipse, IntelliJ, STS

ORM Frameworks: Hibernate, JSF

Frontend Technologies: Angular, React.js, Redux.js, Next.js, React Native, Vue.js, Tailwind, Bootstrap

Backend Technologies: Java Spring Boot, Django, FastAPI, Node.js, Express.js

Cloud Technologies: AWS (EC2, S3, Lambda, RDS), Azure (VMs, Load Balancers)

Web Services: JAX-WS, JAX-RPC, JAX-RS, REST, SOAP, WSDL

Methodologies: Agile, Scrum, Test-Driven Development (TDD), Waterfall, Rational Unified Process (RUP)

Testing Tools/Technologies: Selenium, Jenkins, JIRA, Jest, React Testing Library, Cypress, JUnit, Postman

Databases: MySQL, PostgreSQL, MongoDB, Redis, DynamoDB, Cloud Spanner, Firebase

Build Tools: Maven, Gradle

Containerization Tools: Docker, Docker Swarm, Kubernetes

EXPERIENCE

Java Full Stack Developer

October 2023 – Current

State of California

Fullerton, CA

- Implemented Microservices architecture using Spring Boot, integrating Restful APIs and Apache Kafka for real-time messaging, data flow.
- Led team to migrate monolith to Dockerized microservices, improving throughput by 75% (400 to 700 TPS) and reducing latency by 53% (600ms to 282ms) reducing deployment failures by 40%.
- Designed multi-cloud infrastructure with AWS and Azure, using auto-scaling to cut hosting costs by 20%.
- Employed Spring AOP for a custom-logging framework which reduced debugging time by 30% and provided insights to track application performance, making it easier to monitor the system's behavior.
- Built RESTful web services to interact with JSON/XML ensuring data exchange, modernizing 10+ APIs with error handling, reducing error rates from 5% to 1%.
- Created 80+ reusable React components with lazy loading and onboarded applications to consume Restful APIs from the APIGEE gateway platform, streamlining API access and management.

Environment: Java, ReactJS, Spring Boot, Spring Security, Hibernate, Microservices, REST, Docker, Node.js, Kafka, JIRA, Git, Maven, Selenium, Mockito, AWS, Oracle 12c

Java/J2EE Developer

JPMorgan Chase

June 2020 – July 2022

Jalandhar, India

- Implemented Redux for state management in ReactJS, improving application performance by 20% and enabling seamless handling of complex user workflows.
- Optimized API performance with Redis caching, reducing response times by 35% for critical user-facing services.
- Optimized backend performance by implementing multithreading and asynchronous processing using Java 8's Executor Service, reducing latency by 30%.
- Implemented J2EE design patterns such as MVC, Singleton, Factory, Adapter, Service Locator, DAO, DTO, and Business Delegate in the development of N-Tier distributed Enterprise Applications.
- Worked with the Security team to implement AES-256 encryption for 50,000+ daily transactions, reducing security vulnerabilities by 70%.
- Deployed Azure applications with load balancers, ensuring 99.9% uptime during peak usage periods.
- Increased E2E test coverage to 95% using Cypress and Jest, reducing high-severity production bugs by 80%.
- Integrated Swagger for dynamic API documentation, making it easier to access and test Rest endpoints, thus streamlining API integration with ReactJS and Angular front-end components.
- Optimized Hibernate HQL queries, improving query response time by 30% and reducing database load by 25%.
- Automated Kubernetes-based CI/CD pipelines using Jenkins, reducing deployment cycles by 50%, and incorporated Selenium for GUI, Functional, and Regression testing to ensure high-quality software releases.

Environment: J2EE, Spring Boot, Microservices, HTML5, CSS3, Bootstrap, Angular, React.js, SOAP, REST, Kubernetes, Apache Kafka, Azure, Jenkins, PgAdmin, NoSQL (MongoDB), GitHub, Firebase, Selenium, Appium, Log4j

Jr. Software Developer

1101 Tech Corporation

May 2019 – June 2020

Gurugram, India

- Refactored monolith to microservices with Node.js, Express.js, tripling release frequency and cutting rollbacks.
- Optimized HR database queries with indexing, reducing query latency by 20% (1s to 800ms) for 10,000 records.
- Worked on a full-stack MERN application project including authentication, reducing HR paperwork by 70% for efficiency.
- Automated backups and disaster recovery, cutting recovery time from 4 hours to 2 hours with no data loss.
- Set up root cause analysis for incidents, reducing recurring outages by 30% and saving \$5,000 yearly.
- Developed REST APIs with Node.js, improving HR system integration speed by 25% for internal tools.

Environment: Node.js, Express.js, jQuery, AJAX, HTML5, CSS3, Bootstrap, SOAP, REST, Postgresql, NoSQL (MongoDB), Log4j

EDUCATION

Cal State Fullerton

Master of Science in Computer Science

Aug. 2022 – May 2024

Fullerton, CA

CERTIFICATIONS

AWS Certified Solutions Architect - Associate - View Certificate

December 2024
