EXPERIENCE

- RootStock Software

Software developer

– Built a dynamic and reusable Field Section LWC on the Salesforce Lightning Platform using Field Sets to group and display related fields, enhancing UI clarity and improving customer experience.

– Integrated UI rules and actions to the Field Section component to control field behavior—like showing, hiding, or making fields required—based on user input.

– Wrote unit tests for Apex controllers and triggers to ensure >90% code coverage and maintain deployment readiness.

– Gained hands-on experience with Salesforce administration tasks such as object/field creation, validation rules, profiles, permission sets, and automation using Flows and Process Builder.

– Integrated custom LWC with standard and custom Salesforce objects using metadata-driven configurations, enabling reusable, flexible, and easily maintainable solutions.

– Debugged and optimized Apex and LWC components using Developer Console, Debug Logs, and Chrome DevTools to enhance performance and maintainability.

- Piramal Capital and Housing Finance

Software development engineer in Test (Intern)

– performed manual and automated testing to validate software functionalities.

– Developed comprehensive test plans and test cases, covering all critical aspects of the product.

– identified and reported defects, collaborating with development teams for efficient resolutions.

– Strong understanding of the Software Development Life Cycle (SDLC) and Agile methodologies.

– implemented test automation frameworks, significantly reducing testing time and costs.

– Tools Used: Jenkins, Gitlab, Grafana, AWS, Jira, IntelliJ.

PROJECTS

- QEats

(Food Ordering App)

– QEats is a popular food ordering app that allows users to browse and order their favorite dishes from nearby restaurants.

– Designed REST API endpoints to query restaurant information and place food orders.

– Integrated Redis caching into the QEats backend to reduce API response latency.

– significant decrease in response time, with an average latency reduction of approximately 30%.

– improved the app performance under 300% increased Concurrent users Using Caching Technology

– Skills Used: Spring Boot, Spring Data, REST API, Jackson, Mockito, JUnit, MongoDB, Redis, Jmeter

Github
- Portfolio Analyzer App

(Java project)

– Created a stock analysis tool to help portfolio managers make trade recommendations to their clients.

– Implemented the core logic of the portfolio manager and published it as a library.

– Refactored code to add support for multiple stock quote services.

– Improved application stability by increasing the Api rate limit by 30% to 50% and increasing performance.

– Skills used: Interfaces, Exception Handling, Code Refactoring, Gradle, Java, REST API, Jackson, JUnit, Mockito.

- GeekTrustChallenge

(MetroCard System)

– Utilized a Java backend solution for a metro system with non-stop journeys from Central station to Airport, incorporating MetroCard electronic payment utility.

– Employed object modeling for passenger age-based travel charges calculation.

– Achieved 92% score on Geektrust platform, ensuring efficient and accurate solution delivery.

– Skills Used: Java, Unit Testing, Test Driven Development, Object Modeling.
