TECHNICAL SKILLS

Languages: Python, JavaScript, , SQL (SQL Server, Oracle), HTML/CSS, Typescript, C#

Frameworks: Flask, React, Node.js, Material-UI

Developer Tools: GitLab, Gitlab CI/CD, Gitlab Runner, Git, Docker, KCS/Openshift, VS Code, bash, Postman

Libraries: Flask, buildah, Bootstrap React, pandas

EXPERIENCE

Data Analyst / Software Developer

Jul 2023 – Present

Boeing South Carolina

Charleston, SC

- Developed a GitLab CI/CD pipeline to build and deploy a Docker image to Kubernetes Container Service (OpenShift)
- Implemented and engineered a full-stack web application using Flask, SQL Server, and JavaScript to analyze manufacturing data
- Created complex SQL queries and user-friendly Tableau/PowerBI dashboards to unify data from Data Warehouses and production systems
- Supported different Industrial Engineering responsibilities through scripting of data flow, automation of scheduling tasks, and providing integration to capital/NC machinery

Digital Business Analyst

Jan 2022 – Jul 2023

Michelin North America

Greenville, SC (Remote)

- Composed user stories in Jira, using business requirements and technical software documentation
- Created both low fidelity wire frames via Lucid chart, and developed highly interactive, code/variable driven, and responsive prototypes via UXPin
- Developed Postman JavaScript scripts to create test cases for Feathers REST API implementation
- Trained on React framework in downtime to create better understanding with FE Developers

IT Business Analyst

Aug 2021 – Jan 2022

Mercedes-Benz Vans, LLC

Charleston, SC

- Developed enhancements for a Windows IIS hosted web application running on C#, .asp, and .NET Framework
- Implemented version control via GitHub for the above mentioned app
- Implemented SMTP/SMS alerts for our web application to inform colleagues of production critical events
- Created, executed, and tested T-SQL scripts for updating Manufacturing Execution System (MES) data and functionalities
- Administered and managed MES to PLC integration via TCP/IP telegram communication
- Established a Batch script (and automated script delivery system) to control production-side tablets

Production IT Specialist

Apr 2019 – Aug 2021

Mercedes-Benz Vans, LLC

Charleston, SC

- Established proficiency in Oracle SQL queries by satisfying production team requirements for quality data reports
- Automated a process to update quality system data involving a .vbs script to generate XML and add to file queue for processing
- Executed both integration testing between IT systems using REST APIs and UAT for software releases

PROJECTS

REMi | Python, Flask, SQL Server, React, JavaScript, Docker, Git, GitLab CI/CD

Jul 2023 – Present

- Developed a full-stack, Docker-containerized web application with Flask to serve a React/JS FE for capturing of real-time production data/events
- Implemented GitLab CI/CD pipeline to perform build, scan, test, and notify actions automatically in the SDLC
- Established a REST API interface for the data that the Flask app serves to allow for integration with other systems and future projects
- Outlined a branching and environment strategy for the application's life cycle
- Supported fellow team members with coding challenges and structured both DB schema and BE data hierarchy

Andon and Production Scanning | *C#, SQL Server, .NET, ASP, Git*

Aug 2021 – Jan 2022

- Collaborated and enhanced a full stack application hosted on Windows IIS that served MES production sequences to Andon boards and mobile scanners
- Established new SQL Server tables and queries to display on FE
- Implemented BE validation to ensure invalid data was filtered out of sequence and to alert logistics employees
- Defined and migrated a version control strategy for the application that was only ever on the Windows server directory

EDUCATION

College of Charleston

Bachelor of Science in Physics, Minors in Math & German

Charleston, SC

Graduated May 2017
