

Likhitha Chinthakuntla

Software Developer

FL | 904-413-1274 | likhithareddych@gmail.com

SUMMARY

Software Developer with 3+ years of experience building scalable web applications using Java (Core & Java 8), Kotlin, Spring Framework, React.js, and Microservices Architecture. Proficient in front-end and back-end development, utilizing technologies like HTML5, CSS3, JavaScript, Hibernate, and J2EE components. Skilled in cloud services, particularly AWS, and database management with MySQL, PostgreSQL, and MongoDB. Experienced in SDLC, Agile, and Waterfall methodologies, with hands-on expertise in Git, Maven, Jenkins, and Jira. Strong problem-solving and collaboration skills, with a track record of delivering high-quality solutions in cross-functional teams.

SKILLS

Methodology: SDLC, Agile, Waterfall
Languages: Java (Core & Java 8), Kotlin, SQL, Python, PHP, C++
IDEs: NetBeans, IntelliJ IDEA, Eclipse, VScode, Spring Tool Suite
Frameworks/Libraries: Spring Framework (Spring MVC, Spring Boot, Spring Security), Hibernate, Microservices Architecture, React.js, Node.js, JSF.
Front-End Development: HTML5, CSS3, JavaScript (ES5/ES6), Bootstrap, jQuery, Ajax, JSON, and XML
J2EE Technologies: Servlets, JSP, JSTL, JavaBeans, and JDBC
Cloud: AWS (IAM, API Gateway, RDS, Lambda, EC2, S3)
Build & Other Tools: Maven, Gradle, JUnit, Jenkins, UML, MS Visio
Database: MySQL, PostgreSQL, NoSQL, MongoDB, and Firebase
Version Control & Project Management: Git, GitHub, Jira, Trello
Soft Skills: Cross-Functional Collaboration, Problem-Solving, Communication, Leadership
Operating Systems: Windows, Linux

EDUCATION

Master in Computer Science University of Florida	2022 – 2023
Bachelor of Computer Science Chaitanya Bharathi Institute of Technology	2016 – 2020

EXPERIENCE

ServiceNow, FL Software Developer	2023
--	-------------

- Develop and maintain scalable web applications using Java, Python, Django, and Flask, improving system performance by 20%.
- Implement SQL and MongoDB for database management, enhancing data retrieval speeds by 30%.
- Build dynamic, responsive user interfaces with HTML, CSS, JavaScript, JSON, and XML, increasing user engagement by 15%.
- Use NumPy and Pandas to optimize data processing pipelines, reducing data processing time by 25%.
- Automate build and deployment pipelines using Maven and Jenkins, decreasing deployment time by 40%.
- Manage cloud infrastructure on AWS, Azure, and GCP, improving scalability and reducing infrastructure costs by 18%.
- Conduct unit and integration testing to ensure high code quality, reducing post-production bugs by 30%.
- Collaborate with cross-functional teams to integrate RESTful APIs with the front end, enhancing system functionality and reducing integration time by 25%.
- Optimize application load times through efficient code and server-side enhancements, improving performance by 20%.
- Lead weekly agile sprints and standups, maintaining a 95% on-time delivery rate for key project milestones.

SHREC: Center for Space, High-Performance, and Resilient Computing · Part-time, Gainesville, Florida, United States Hybrid | Aug 2022 to May 2023 · 10 mos | Software Application Developer

- Led the development of a SaaS-based AI-Integrator platform to streamline the training and deployment of machine learning models, reducing development time by 80% and improving deployment efficiency by 40%.
- Leveraged MongoDB for efficient data management, optimizing the storage and retrieval of user-specific project data, which resulted in a 15% reduction in database query time and improved overall application performance.
- Designed APIs for seamless integration with Hugging Face models, reducing integration time for developers by 25%.
- Optimized platform performance for AI workloads by utilizing Intel Gaudi 2 and Sapphire Rapids CPUs, achieving a 35% increase in processing speed for large-scale machine learning model training and inference.

NCR Corporation, India Software Engineer	2020 – 2021
---	--------------------

- Led developing and refining a services architecture using AngularJS, Java, Spring Boot, Hibernate ORM, and MySQL, improving system integration and efficiency by 30%.
- Enhanced data transfer from point-of-sale systems to databases by 40%, ensuring timely and accurate updates.
- Automated setup processes for new stores and clients, cutting setup time in half and allowing customized reporting.
- Improved system response times by 40% by handling high volumes of incoming requests using multi-threading.
- Cut database query times by 70% by refining operations and resolving bottleneck issues through monitoring.
- Implemented tools to manage data flow and error responses better, reducing system interruptions and failures by 30%.
- Introduced audit logs for inventory and employee management transactions, securing data integrity and meeting compliance standards.
- Drove the software development lifecycle, accelerating project completion by 25% and elevating team skills through targeted training.
- Improved the efficiency of existing C++ code by refactoring legacy systems, reducing memory usage by 30%, and increasing execution speed by 20%.
- Developed solutions to monitor system logs, reducing issue resolution times by 60%.
- Implemented the MVC design pattern to separate interface design from data processing, improving system organization by 35%.
- Ensured 99% system uptime and consistent performance using Jenkins to maintain microservices.
- Improved software quality and project integration speed by 40% by implementing comprehensive testing protocols covering 95% of functionalities.

CERTIFICATIONS

AWS Certified Developer Associate
