

Manisha Varma
manishavarma2619@gmail.com
913-735-3797
DevOps Engineer

SUMMARY:

- Over **4+ years of experience** in the IT industry, specializing in **DevOps, Cloud Implementation, Infrastructure Automation, CI/CD, and Release Management**.
- Extensive knowledge of the **Software Development Life Cycle (SDLC)**, Agile methodologies, and Quality Assurance processes.
- Expertise in **Linux administration, Configuration Management, Build & Release Engineering, Change/Incident Management, and Cloud Computing**.
- Strong background in **automation, containerization, and orchestration** using tools such as **Docker, Kubernetes, OpenShift, VMware, and Vagrant**.
- Proficient in provisioning and managing **Kubernetes clusters**, including **deployment, scaling, and workload orchestration**.
- Hands-on experience with **DevOps tools** like **Jenkins, Ansible, Chef, Puppet, Terraform, Maven, ANT, and Gradle** for CI/CD and infrastructure automation.
- Skilled in **version control systems** like **Git, GitHub, GitLab, Subversion (SVN), IBM ClearCase UCM**, and client tools such as **Visual SVN, Tortoise SVN, UberSVN, SourceTree, Git Bash, and Git GUI**.
- Extensive experience with **AWS Cloud Services**, including **EC2, S3, EBS, RDS, VPC, ELB, Auto Scaling, CloudFormation, CloudFront, SNS, and Route 53**.
- Expertise in **Infrastructure as Code (IaC)** using **Terraform** for provisioning AWS infrastructure, integrating with **Jenkins** for seamless automation.
- Developed and managed **Ansible Playbooks** and **Puppet Manifests** for provisioning and configuring **Apache, Tomcat, Nginx, Apache Spark**, and other applications.
- Automated **AWS EC2 instance lifecycle management** using **BOTO** and optimized cloud operations.
- Strong scripting expertise in **Python, Groovy, Bash, Shell, and Perl** for automation and system administration.
- Experience in **building and deploying applications on OpenStack private cloud**, integrating with Puppet for provisioning and maintenance.
- Developed **custom Jenkins plugins** to enhance CI/CD capabilities, ensuring seamless deployment with **Terraform**.
- Proficient in **Cloud Management Platforms (IaaS, PaaS, SaaS)** with experience in AWS and OpenStack.
- Strong background in **Deployment Automation & Containerization** using **Docker, Kubernetes, OpenShift, and Rancher**.
- Well-versed in **monitoring and logging tools** such as **CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana), and Prometheus-Grafana**.
- Streamlined **OpenShift installation and deployment** on partner cloud infrastructures like AWS.
- **Excellent documentation skills**, including maintaining **build reports, release notes, and technical documentation**.

TECHNICAL SKILLS:

Version Control Tools	GIT (GitHub, Atlassian bit bucket, GitLab), Subversion, CVS, TFS
Configuration management	Chef, Puppet, Ansible, Terraform
System Monitoring Tools	Elastic Search, Kibana, Nagios, Grafana, ICINGA, Cloud Watch
Build & CI Tools	Apache Ant, Maven, Gradle, Docker, Kubernetes, TeamCity, Confluence, Atlassian, Jenkins, Hudson, Build Forge, Atlassian Bamboo
CD Tools	Custom Tools, RPM, YUM, NPM, Octopus Deploy
Bug tracking Tools	Atlassian JIRA, REMEDY, Fisheye, Bugzilla, Bug tracker, TFS, Agile
Cloud Technologies	AWS (VPC, EC2, S3, CloudWatch, Lambda, RDS, EBS, IAM), Google Cloud, Microsoft Azure, IaaS, PaaS, SaaS
Languages	C, C++, JAVA, J2EE, ASP.net
Scripting Languages	Bash, Python, Shell Scripting, Groovy, Ruby
Web Application Servers & Technologies	Apache Web Server on Windows, IIS, Linux and Solaris, Web Logic, JBOSS, Tomcat, Apache 2.x, 3.x
Middleware File Systems	WebLogic, WebSphere and Tomcat, UFS, VMware, vSphere
Databases	Oracle 10.x, SQL Server 2008, 2012, MS Access, MySQL 5.0.2
Operating Systems	UNIX, Linux, WINDOWS NT/2000/2003/XP/vista/7, Red Hat Linux 5.x/6.x/7 Ubuntu, Centos, Windows Server 2003/2008/2012
Networking Protocols	TCP/IP, NIS, NFS, DNS, DHCP, Cisco Routers/Switches, WAN, SMTP, LAN, FTP/TFTP, UUCP, X.25, LAN, WAN, SSH, UDP, TELNET

EDUCATION

Masters – Computer Science Wichita State University

PROFESSIONAL EXPERIENCE:

Express Scripts, St. Louis, MO

Feb 2024 – Present

Role: DevOps Engineer

Responsibilities:

- Managed **AWS cloud infrastructure**, working extensively with **EC2, ElasticSearch, VPC, Subnets, Routing Tables, Internet Gateways, IAM, Route53, VPC Peering, S3, ELB, RDS, Security Groups, Cognito, CloudWatch, and SNS**.
- Developed **AWS Launch Configurations** using custom AMIs to configure **Auto Scaling Groups**, optimizing system performance and cost efficiency.
- Automated **AWS infrastructure provisioning** using **CloudFormation templates**, ensuring rapid and consistent deployments.
- Implemented **Auto Scaling, Load Balancing (ELB), and Glacier storage** for QA environments and infrastructure servers such as Git and Chef.
- Designed and developed **AWS CloudFormation templates** to provision **EC2 instances, VPCs, and subnets** with security best practices.
- Configured **AWS CloudFront** to enhance content delivery performance and reduce front-end server load.
- Automated **SSH key management and password generation** with shell scripts, integrating them into **Jenkins pipelines** for seamless CI/CD workflows.

- Configured and managed an **ELK stack (Elasticsearch, Logstash, Kibana)** to **collect, search, and analyze logs** across distributed systems, improving monitoring and troubleshooting.
- Deployed and orchestrated **containerized applications** using **Kubernetes**, managing **Pods, ConfigMaps, Services, and Nodes** for scalable microservices architecture.
- Developed and maintained a **Jenkins CI/CD pipeline**, enabling seamless **builds, testing, and deployments** of microservices to **Docker registry and Kubernetes clusters**.
- Migrated CI/CD processes to **AWS using Terraform and CloudFormation**, ensuring **infrastructure as code (IaC)** practices were followed.
- Implemented **Docker containerization** for development, integrating with **Vagrant, AWS, and VPCs** to streamline environment management.
- Created and configured **Docker Slave Nodes for Jenkins**, leveraging custom Docker images and pushing them to **Amazon ECR**.
- Automated software and service configuration using **Chef cookbooks** and **Terraform**, improving infrastructure consistency and reliability.
- Worked on **applying patches, security updates**, and recommending security best practices for **web application servers**.
- Troubleshoot and resolved **build failures in Jenkins pipelines**, ensuring smooth software releases.

Environment: Red Hat Linux 5.0, Java 1.8, Eclipse, Jenkins, Spring Batch, SQL, SVN, Git, ANT, ELK Stack, Maven, WebLogic, Apache Tomcat, Shell Scripting, Perl, Puppet, Chef, Nexus, AWS (EC2, RDS, CloudFormation, Route53, ELB, S3, VPC, Auto Scaling), Docker, Kubernetes, Terraform, JUnit, JIRA, Rally, Katalon, Python, SQL.

Comcast, Philadelphia , PA
Role: Cloud /DevOps Engineer

Oct 2022 – Jan 2024

Responsibilities:

- Managed and enhanced **WebSphere and JBoss EAP** servers supporting Java-based applications, including **Spring, Struts, and REST services**.
- Led the **redesign of existing applications** using a **Microservices-based architecture**, improving scalability and maintainability.
- Supported **performance testing, security testing, and infrastructure maintenance** using tools like **Fortify, SonarQube, and Performance Center Lab**.
- Maintained and updated **technical architecture documentation** for application infrastructure and system design.
- Designed and deployed multiple applications on **AWS**, utilizing core services such as **EC2, Route53, S3, RDS, DynamoDB, SNS, SQS, and IAM** for **high availability, fault tolerance, and auto-scaling**.
- Implemented **AWS CloudFormation and Terraform** to provision **VPC, EC2, S3, IAM, EBS, Security Groups, Auto Scaling, and RDS** with infrastructure-as-code (IaC) best practices.
- Developed **CloudFormation templates and Terraform modules** to automate AWS infrastructure provisioning and configuration.
- Built **Jenkins pipelines** to deploy **AWS infrastructure** from **GitHub repositories** containing **Terraform code**, ensuring CI/CD automation.
- Deployed **Kubernetes clusters** to orchestrate containerized applications, managing Pods, ConfigMaps, and Service Mesh.
- Designed and implemented **Docker-based containerization** for **cloud-based applications**, improving portability and efficiency.
- Automated infrastructure provisioning, configuration, and monitoring using **Ansible, Terraform, and Jenkins**.
- Managed **source control, branching strategies, and versioning** using **GitHub, GitLab, and Bitbucket**.
- Created and managed **AWS RDS instances** using **CloudFormation and Terraform**, ensuring high availability and backup automation.
- Integrated **Splunk and AWS CloudWatch** for centralized **application performance monitoring and log analysis**.
- Developed **CI/CD pipelines** using **Jenkins, Maven, and Git**, improving release cycles and deployment efficiency.
- Configured **AWS Elastic Beanstalk** to deploy and scale applications using **Java, PHP, Node.js, Python, and Docker**.
- Automated **server provisioning and configuration** using **Ansible Playbooks**, integrating them with **Jenkins for continuous delivery**.

- Managed **Azure cloud services**, including **Virtual Machines (VMs)**, **Networking**, **Azure Logic Apps**, **Service Bus**, **Document DB**, and **SQL Databases**.
- Developed **ARM templates and PowerShell scripts** for **Azure cloud infrastructure automation**.
- Configured **Azure Active Directory (AAD)**, **Azure Key Vault**, and **Application Gateway**, ensuring security best practices.
- Worked on **AWS Auto Scaling**, **Load Balancing (ELB)**, and **Glacier storage** to enhance system performance and reliability.
- Utilized **Artifactory Repository Managers (JFrog, Nexus)** for **Maven build artifacts** in cloud-based environments.
- Built and deployed **Java-based microservices** using **Spring Boot**, developing **RESTful APIs and integrating them with AWS services**.
- Optimized **CI/CD pipelines** by integrating **Docker**, **Kubernetes**, and **Terraform** with Jenkins, enabling automated deployments.

Environment: AWS (EC2, S3, RDS, Route53, IAM, CloudFormation, Auto Scaling, Lambda, DynamoDB, SNS, SQS, Elastic Beanstalk), Azure (VMs, Logic Apps, Key Vault, Service Bus, SQL DB), Kubernetes, Docker, Terraform, Ansible, Jenkins, Git, GitHub, GitLab, Bitbucket, Nexus, Artifactory, WebSphere, JBoss, WebLogic, Apache Tomcat, MySQL, PostgreSQL, Oracle, SQL Server, Python, Shell Scripting, PowerShell, JIRA, Splunk, SonarQube, Fortify, ELK Stack (Elasticsearch, Logstash, Kibana), Nagios, Red Hat Linux, Windows Server.

TD Ameritrade, Omaha, NE
Role: DevOps Engineer

May 2020 – Sep 2022

RESPONSIBILITIES:

- Build and configure a virtual data center in the Amazon Web Services cloud to support Enterprise Data Warehouse hosting including **Virtual Private Cloud (VPC)**, Public and Private Subnets, Security Groups, Route Tables, Elastic Load Balancer.
- Leveraged **AWS** cloud services such as EC2, auto-scaling and VPC to build secure, highly scalable and flexible systems that handled expected and unexpected load bursts.
- Design and Implemented Cloud Orchestration solution using **AWS EC2 & Docker**.
- Setup and build **AWS infrastructure** various resources, VPC EC2, S3, IAM, EBS, Security Group, Auto Scaling, and RDS in Cloud formation JSON templates.
- Maintained the user accounts (IAM), RDS, Route 53, VPC, RDB, Lambda, Dynamo DB, SES, SQS and SNS services in AWS cloud and Deployed applications on AWS by using Elastic Beanstalk.
- Designed and implemented scalable, secure cloud architecture based on Amazon Web Services.
- Built Continuous Integration environment Jenkins/Maven and Continuous delivery environment.
- Responsible for orchestrating **CI/CD** processes by responding to Git triggers, human input, and dependency chains and environment setup, Design and document CI/CD tools configuration management.
- Implementing a Continuous Delivery framework using **Jenkins, Puppet, Maven and Nexus in Linux**.
- Develop PowerShell, Python and Linux scripts for Chef and U-Deploy to build end to end automations.
- Setup and installed **RHEL, Centos, Ubuntu, Solaris servers**.
- Utilized Configuration Management Tool Chef& created Chef Cookbooks using recipes to automate system operations and configure Apache Tomcat, Jenkins, and Run-Deck and deployment automation.
- Implemented a CD delivery pipeline with **Docker, Jenkins and GitLab/GitHub with AWS AMI's**.
- Installed Docker registry for local upload and download of Docker images and from Docker hub.
- Used Kubernetes to deploy, load balance, scale and manage Docker containers with namespace versions.
- Implemented a continuous deployment pipeline with Jenkins and Jenkins workflow on Kubernetes.

ENVIRONMENT: AWS (EC2, VPC, ELB, S3, RDS, Cloud Trail, Route 53), VDI, Linux, Git, IAM, Cloud watch, Cloud Formation, AWS CLI, AWS Auto Scaling, Ant, Maven, Nagios, Subversion, JIRA, Agile, Jenkins, Shell scripting, Chef, Web Sphere, Kubernetes, JBoss, Apache Tomcat, Docker.
