SUMMARY

- With around **Four** years of hands-on experience in **Java** development, successfully delivered scalable and maintainable software solutions across various domains and industries.
- Proficient in designing and implementing **RESTful APIs** using Java and **Spring framework**, ensuring efficient communication between client and server applications.
- Demonstrated proficiency in developing batch processing applications using Java EE technologies like **Java Batch API**, managing large volumes of data efficiently and processing complex business logic.
- Leveraged **Hibernate framework** to implement **Object-Relational Mapping (ORM)** in Java applications, simplifying database interactions and enhancing data access layer performance.
- Proficient in working with diverse databases such as **MySQL**, **PostgreSQL**, and **MongoDB**, designing schemas, writing complex queries, and optimizing database performance.
- Skilled in **React** for building interactive user interface and **Angular** for dynamic single-page applications, ensuring responsive web development.
- Designed and implemented asynchronous messaging systems using **Java Message Service (JMS)** and **Apache Kafka**, enabling real-time communication and event-driven architectures.
- Deployed Java applications to **cloud platforms**, leveraging cloud-native services for scalability, reliability, and cost-effectiveness.
- Demonstrated extensive understanding and experience with the entire **Software Development Life Cycle (SDLC)** including Agile and Waterfall methodologies, and project management skills.
- Worked collaboratively with various business and technical stakeholders to identify and implement new and improved designs and process changes aligning with business strategies and priorities.
- Practiced **test-driven development (TDD)** methodologies to write robust and maintainable code, ensuring comprehensive test coverage and early detection of defects.
- Experienced in **AWS cloud services**, containerization with **Docker**, automated testing with **Junit**, build automation with **Maven**, continuous integration with **Jenkins**, and version control with **Git/GitHub/GitLab**, ensuring efficient and high-quality development processes.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript, SQL, Python, HTML5, CSS3
- **Web Development & Frameworks/Libraries:** NodeJS, Angular, React, Express, Apache Kafka, Ajax, Hibernate, Spring Boot, Spring MVC, Spring Security, Spring AOP, Spring Cloud, J2EE, REST, SOAP, JSON, XML, XSLT, XPATH
- **Java Technologies:** JDBC, Servlets, JSP, JSTL, JMS, JPA, JNDI, JAXP, JMX, AJAX
- **Databases:** MySQL, PostgreSQL, MongoDB, Amazon RDS, Amazon DynamoDB, Oracle (JDE)
- **Cloud Technologies:** AWS EC2, AWS Route53, AWS Lambda, AWS Elastic Beanstalk, AWS CloudFront
- **Tools:** AWS, Jenkins, Docker, Kubernetes, Maven, GitHub, Mockito, Jira, Postman, Android Studio, JUnit
- **Software IDE:** Spring Tool Suite, Eclipse, VS Code, IntelliJ, Oracle Integration Cloud (OIC), Oracle SOA Suite (12c), Oracle Service Bus (12c), Oracle Application Express
- **Development Methodologies & Practices:** Microservices Architecture, Dependency Injection (DI), Continuous Integration & Continuous Deployment (CI/CD), Agile, Scrum, Waterfall, SDLC

WORK EXPERIENCE

JPMorgan Chase & Co, NC, USA

Feb 2024 - Current

Java Software Engineer

- Collaborated with stakeholders during the requirement gathering phase to collect user requirements for **FlexONE**, Flex Trade's flagship buy-side OMS.
- Spearheaded full stack development efforts using **Java**, **Spring Boot**, and **Angular JS**, significantly enhancing application architecture and user interface design. Implemented **RESTful APIs** for seamless integration and data transfer between different applications, reducing data transfer latency by 25%.
- Enhanced application interactivity with advanced **Angular JS** implementations, resulting in a 30% improvement in user engagement and streamlined development processes.
- Automated data processing tasks by implementing sequential and conditional batch jobs using **Spring Batch framework**, resulting in a 20% improvement in data processing speed and a 15% reduction in error rates.
- Developed and optimized complex **PL/SQL queries, scripts, triggers, functions**, and **stored procedures** to support data operations, improving database query performance by 30%.
- Employed **AWS services (EC2, S3, Lambda, RDS)** and **Docker**, achieving scalable and cost-effective deployment, achieving a 20% reduction in infrastructure costs and a 25% increase in deployment efficiency.
- Implemented robust security protocols using **OAuth** and **JWT** and led comprehensive testing using **JUnit** and **Mockito** to ensure application robustness and security.
- Developed and maintained **CI/CD pipelines** using **Jenkins** to streamline testing and deployment processes. Actively engaged in Agile methodologies to enhance team productivity and accelerate product development cycles.
- Enhanced team collaboration and code management using **Git**, **GitHub**, and **GitLab**, ensuring seamless code management and a 20% improvement in codebase integrity. Streamlined system documentation processes using tools like **draw.io**, reducing delays and improving project documentation quality.

University of North Carolina at Charlotte, NC, USA

Aug 2023 - Dec 2023

Graduate Assistant - Software Development Project Analyst

Course: Software Development Projects under Prof. James Rudd

- Developed a trade project as a practical demonstration to illustrate the functionality and integration of **Spring Boot**, **MVC Architecture**, **Hibernate ORM** and **SQL** database for student comprehension.

- Conducted **comprehensive testing** of project deliverables, meticulously evaluating each component for functionality and quality assurance.
- Identify **errors, bugs** and inefficiencies in student projects related to the utilization of **Spring Boot, MVC architecture, Hibernate ORM and SQL database**. Delivered constructive feedback to project teams, pinpointing areas for enhancement and proposing solutions.
- Assisting in the documentation and dissemination of project outcomes, including preparing reports or case studies.
- Reviewed and graded submissions from 40 students, each working on distinct ideas, offering corrections for improvement.

Larsen-Toubrro Infotech Limited, India

Nov 2020 - Jun 2022

Software Engineer

- Engineered high-performance **Java solutions**, achieving a 20% reduction in application response times, and enhancing overall system efficiency by 15%. Optimized algorithms improved data processing speed by 25% and application scalability.
- Developed **RESTful APIs** using Java technologies such as **JSP, JDBC, JSF, Servlets, and Spring**, resulting in a 20% improvement in data retrieval and system responsiveness.
- Developed and maintained user interfaces using **React**, improving user experience and interface responsiveness by 25%. Implemented performance centric React patterns, including **memoization** and **virtualization** for long lists. Instituted form validations using controlled components, leveraging **Redux** for meticulous state control.
- Implemented Agile methodologies, leading TDD and BDD practices, resulting in a 30% increase in project delivery efficiency and a 25% reduction in post-release defects, ensuring high-quality, and iterative software development.
- Spearheaded the design and development of multiple **Oracle BPEL integrations**, utilizing **Oracle Fusion Middleware** and Spring Boot, seamlessly connected on-premises applications with third-party systems, resulting in a 30% increase in operational efficiency and 20% reduction in manual data entry.
- Architected and implemented highly scalable and fault-tolerant **JMS** solutions for enterprise applications, enhancing message delivery reliability by 20% and reducing system downtimes by 15%.
- Used **JUnit** for testing purposes and oversaw version control through **GitHub**, achieving a 15% reduction in bug resolution time.
- Documented system architecture, data models, and technical specifications, facilitating team collaboration and future maintenance efforts, contributing to a 20% increase in development team productivity.
- Managed defect tracking and resolution using **Jira**, prioritizing, and troubleshooting fixes to ensure timely resolution and maintain product integrity, resulting in a 20% decrease in unresolved issues.

Dell Technologies, India

May 2019 - Oct 2020

Software Engineer

- Contributed to the development of a user-friendly web application for **Advance America QTrack Project**, featuring a real-time dashboard for tracking transactions and account information.
- Implemented **Java-based service layer** applications, such as **transaction processing modules**, utilizing advanced Java features to ensure efficient handling of large datasets and complex business logic, resulting in a 30% acceleration in processing rate.
- Revitalized the **data access layer** using **Hibernate**, reducing database query response times by 25% and improving overall system efficiency. Optimized mapping strategies increased data retrieval speed by 15% and enhanced database operations scalability.
- Leveraged advanced **jQuery techniques** to optimize **DOM manipulation**, achieving a 20% improvement in client-side performance and seamless integration with backend Java services.
- Designed and implemented user-friendly web interfaces using **HTML, CSS, JavaScript, Bootstrap, and jQuery**, leading to a 25% increase in user satisfaction and a 30% reduction in bounce rates.
- Implemented asynchronous messaging using frameworks like **Apache Kafka** to enable real-time communication between different components of the application.
- Applied Java concepts like **Streams, lambda expressions, and Functional Interfaces** to optimize code, particularly in components handling data transformation and validation.
- Employed **MongoDB** for database operations and executed complex queries to support functionalities like transaction history analysis and reporting, leading to a 35% improvement in query performance.

PROJECTS

Comic Swap: Your Comic Book and Vintage Toy Trading Platform (MongoDB, Express, React, NodeJS)

- Innovative web application designed for the exchange of comic books and vintage toys, featuring user-friendly trading functionalities.
- Utilized **MongoDB** as its database and the back end is established on **Node.js** with **Express** for scalability. **Mongoose ORM** serves as middleware to facilitate interactions with the database, enhancing data modeling and manipulation.
- On the front-end, dynamic pages are created using **HTML, CSS, and JavaScript**, with user data rendered using a template engine. Enhanced security for personal profiles and trade activities is secured through a robust user authentication system.

Full Stack E-Commerce Application (Spring Boot, Rest APIs, Angular, MYSQL)

- The fully operational web application facilitates seamless user experiences, enabling registration, product cart additions, purchases, and transactions. Also, implemented end-to-end encryption to enhance security measures by 30 percent.
- Okta for customizable drop-in solution to add authentication and authorization services to applications for 100 plus users.

EDUCATION

University of North Carolina at Charlotte, Charlotte, NC, USA

Aug 2022 - Dec 2023

Master of Science in Computer Science

Chaitanya Bharathi Institute of Technology, Hyderabad, India

Aug 2016 - Oct 2020

Bachelor of Engineering in Information Technology

CERTIFICATION

- AWS Certified Cloud Practitioner
- Certified Professional in Data Structures and Java from NPTEL, Oracle Cloud Platform Application Integration Certified Specialist
