SUMMARY

Data professional with 4 years of experience of working in Financial domain in implementing digital product solution consisting of Data Engineering, Advanced Analytics and Business Intelligence techniques across various business fronts.

EDUCATION

M.S. Business Analytics - Data Science, University of Texas at Dallas

May 2022

B.E. Software Engineering, Thapar Institute of Engineering and Technology

May 2018

WORK EXPERIENCE

Data Engineer , Procter & Gamble

June2022 - Present

- Built a cloud-based ETL pipeline to ingest data from heterogeneous data sources like Thread App and E4 devices using SFTP protocol for different clinical trials.(Azure Databricks , Airflow, SQL Alchemy ,Python)
- Design data models for 3 Clinical trials in the enterprise data warehouse using MySQL Workbench.
- Developed a real-time compliance dashboard to check the compliance of participants in the ongoing clinical trials using PowerBI. Set up auto-refresh using PowerBI Gateways
- Closely worked with business teams to gather requirements and translate business problems to scalable and reliable data solutions.

Data Science Intern, Eonum

Feb 2022 –June 2022

- Worked on designing predictive model for US equities on time series data using Xgboost.
- Created new features for the OHLC data.
- Backtesting and deploying trading strategies in real time.

Data Analyst , Futures First

Jan 2018 -Mar 2020

- **Stock price forecasting:** Developed Time series Models using ARIMA to forecast and analyze future stock price of commodities on OHLC data (wheat, soya, etc.) with 78% R2 score (Python, Autoregression, ARIMA)
- **A/B testing:** Monitored the change in commodity prices by analyzing change in freight rate at different level of supply chain for different commodities.
- **Seasonal Market Analysis:** Performed exploratory data analysis on time series data to unravel the seasonal patterns and intermarket relations across commodities and energy markets. (Python, Excel)
- **Data Wrangling:** Designed a process to cleanse, transform and consolidate 50 columns of raw data from csv files into two relational database tables for the project mentioned above. (python, SQL)

ACADEMIC PROJECT AND CAPSTONE PROJECT

Disease Progression Model:

- Predicted the future disease risk using Logistic regression, Xgboost models for 50k kidney and heart patients with 97% recall and 98% AUC (AWS, Python, SQL)
- Performed EDA, feature engineering/selection using one hot, TFIDF, binning, word embeddings, tokenization, missing value imputation, bag of words, count vectorizer for all models mentioned above

Spam Detection Model (Python):

- Compared feature Reduction models PCA and feature Selection by Random Forest and shortlisted top 20 features.
- Trained Logistic Regression and Decision Tree models, tuned hyperparameters using Grid search, Optimized models using F1-score.

CERTIFICATIONS AND TECHNICAL SKILLS

- **Programming:** Python (NumPy, Pandas, Scikit-learn), SQL, Azure Databricks, Snowflake, Git, Shell Scripting, Apache airflow
- **Business Intelligence:** Power Bi, Tableau, R (ggplot2), Python (Matplotlib, Seaborn, Plotly) , Excel

- **Machine Learning:** NLP, Linear Regression, Logistic Regression, SoftMax Regression, Gradient Descent, Classification, SVMs, KNN, Decision Tree, Random Forest, Clustering, Bagging, Boosting
