PROFESSIONAL SUMMARY

- IT professional with around 7 years of experience in object-oriented design, development, deployment, and maintenance using Java technologies.
- Proficient in Java technologies with a focus on creating RESTful web services. Experienced with frameworks such as Spring (Spring Boot, Spring MVC), JPA (Java Persistence API), and Hibernate for efficient database interactions.
- Developed applications utilizing J2EE technologies including Java, JSP, Servlets, JDBC, and XML/XSL, and implemented MVC architecture using frameworks like Struts.
- Expertise in core programming skills, including object-oriented programming (OOP) principles and multi-threaded programming.
- Experienced in end-to-end automation using CI/CD tools such as Jenkins for build automation, Docker for containerization, and Kubernetes for container orchestration.
- Skilled in various AWS tools and services, including EC2 for virtual servers, S3 for object storage, RDS for relational databases, and Lambda for serverless computing.
- Extensive experience with SQL databases including SQL Server, DB2, Oracle, and MySQL. Capable of designing and optimizing database schemas, writing complex SQL queries, and performing database tuning and optimization.
- Proficient in frontend technologies such as Angular for dynamic web applications, Node.js for server-side scripting, AJAX for asynchronous client-server communication, and XML technologies including SAX and DOM parsers.
- Excellent problem-solving skills, team collaboration, and project management abilities.
- Proficient in configuration management tools like Git for version control.
- Experienced in using messaging frameworks such as JMS (Java Message Service) for reliable messaging between distributed systems and IBM MQ for enterprise messaging.
- Developed dynamic and interactive single-page applications (SPA) using React JS, enhancing user experience and application performance.
- Skilled in using bug tracking tools including JIRA for issue tracking and project management, and HP QC/ALM for test management and defect tracking.
- Strong understanding of Gang of Four Design Patterns such as Façade, Singleton, DAO, and MVC (Model-View-Controller) for building scalable and maintainable software applications.
- Experienced with development methodologies including SDLC (Software Development Life Cycle), Agile (Scrum, Kanban), and Waterfall, practicing Agile principles for iterative software delivery.
- Secured AWS resources by managing IAM roles and policies and implemented logging and monitoring using AWS CloudTrail and CloudWatch.
- Leveraged AWS Sage Maker to build and deploy machine learning models, integrating with S3 and Lambda for data preprocessing and inference.

- Prepared comprehensive test case scenarios using tools like TestNG and JUnit, documenting test results for validation and reporting purposes.
- Experienced in providing user support, troubleshooting issues, and conducting training sessions to enhance end-user proficiency in using developed applications.
- Deep understanding of logical and physical data modeling and relational database technologies.

Java Full Stack Developer
Yahoo, Sunnyvale, CA

July 2023 – Present

Responsibilities:

- Worked as a Software Developer, actively participating in all phases of the Software Development Life Cycle (SDLC), including requirement gathering, design, development, and testing.
- Developed Angular controllers, services, filters, and HTML templates using various Angular directives such as ng-app, ng-controller, ng-repeat, ng-if, ng-show, ng-hide, ng-change, and ng-blur.
- Implemented Angular routing to create a seamless user experience and enable navigation between pages.
- Utilized Bulk Collections extensively for better performance and easy retrieval of data, reducing context switching between SQL and PL/SQL engines.
- Developed microservices architecture using the Spring Boot framework and managed security using Spring Security.
- Implemented performance tuning techniques for better execution and improved performance, including suitable indexes and primary-foreign key constraints.
- Optimized database performance by implementing Hibernate ORM framework with XML configurations.
- Developed end-to-end application components involving business layer, persistence layer, and database and web services layer using MVC with Spring Boot and Hibernate ORM.
- Designed and developed JSP pages using the Struts framework, custom tags, and JSTL.
- Used Bootstrap to enhance the front-end features of the application.
- Implemented Hibernate in the data access layer to access and update information in the database.
- Utilized HTML5 to create well-structured, semantic webpages, enhancing SEO and accessibility.
- Proficient in using AWS CloudFormation and Terraform for infrastructure automation and management.
- Applied CSS3 properties like Flexbox and Grid to create complex layouts and ensure responsiveness.
- Implemented and managed scalable, highly available, and fault-tolerant systems on AWS.
- Developed web applications using Spring Boot, JSP, HTML, Angular, and JavaScript, implementing J2EE design patterns like Spring, Singleton, DAO (Data Access Object), and DTO (Data Transfer Object).

- Used Maven to build and deploy the application to the Tomcat web server.
- Used PostgreSQL to store and manage data with fixed structures like prices, product information, and inventory.
- Utilized Spring framework features, including Spring modules (IOC, MVC, Batch, Web Services, and Integration).
- Built reusable and modular components in React JS, facilitating code maintenance and scalability in large-scale applications.
- Used Spring JDBC Template for persistence with the database.
- Created WSDLs as per wireframes, and UI pages, and generated client jars using JAX-WS.
- Worked on JMS and Messaging Queue (MQ) configurations.
- Developed Message-driven and Session beans that utilize JMS to manage backend transactions.
- Implemented containerization using Docker to package microservices into lightweight, portable units, ensuring consistency across different environments.
- Designed and implemented batch processing jobs in Java that interacted with PostgreSQL databases to process large volumes of data.
- Analyzed and prioritized production issue tickets and transitioned them from development to scheduled releases.
- Used Log4j2 for logging.
- Implemented Spring AOP for logging and exception handling for common logic.

Environment: Java/J2EE, Oracle 10g, JSF, Spring 2.5, Spring Boot, Spring Security, Hibernate 3.0, IntelliJ, Bootstrap, EJB, AWS, HTML5, CSS3, JavaScript, TypeScript, ReactJS, Angular 12, AJAX, XML, JSP, JSTL, Rest API, Docker, Microservices, PostgreSQL, Maven, JUnit, GitHub.

Full Stack Developer

Feb 2022 –June 2023

Thrivent Financials, Austin, TX

Responsibilities:

- Designed and implemented requirements using Java 11 features.
- Developed microservices using Spring Boot on PCF (Pivotal Cloud Foundry) and Microsoft Azure, adhering to the 12 Factor methodology, SOLID principles, and relevant design patterns.
- Leveraged Kafka's MQ architecture for application messaging.
- Utilized Kafka for asynchronous communications between six microservices, both as producer and consumer, along with Apache Zookeeper for coordination.
- Handled consumption and production of messages exchanged with other interfacing products.
- Experience with core AWS services such as EC2, S3, RDS, Lambda, DynamoDB, and VPC.
- Utilized AWS S3 for object storage, backup, and serving static content.

- Deployed applications using AWS Elastic Beanstalk and managed containerized applications with AWS ECS and EKS.
- Achieved scalability and container orchestration through Kubernetes.
- Documented requirements using requirement tracking tools like Blueprint, creating flowcharts and data flow diagrams to represent business processes.
- Employed Scaled Agile (SAFe 5) processes for managing software and product development using iterative and incremental practices.
- Integrated RESTful APIs and GraphQL with React JS to fetch and display data, improving application efficiency and user interactivity.
- Implemented state management using Redux and Context API, ensuring consistent application state across various components.
- Worked as a Scrum team member, contributing to the development of required SAFe artifacts on Azure DevOps, including dashboards for ceremonies such as Daily Stand Up (status), PI (Program Increment) Planning, Team Retrospectives, and Deployment tracking.
- Directed the team in migrating Azure DevOps from on-premises to the cloud.
- Enhanced code coverage to 90% through unit and component testing using JUnit, Mockito, and Power Mock, following the TDD approach.
- Improved functional testing with Cucumber by conducting end-to-end functionality tests with each code addition or modification.
- Conducted continuous code inspection using SonarQube to address code smells, duplicate code, and other code quality issues.

Environment: Java 11, Microservices, Angular 12, HTML 5, Spring, Cucumber, JUnit, Maven, IntelliJ, Spring Core, AWS, CSS, Spring MVC, Spring AOP, Spring DAO, Spring Batch, SQL Developer, Spring Boot, ReactJS, UNIX, TypeScript, Pipelines(CI/CD), Docker, Pivotal Cloud Foundry(PCF), Jfrog Artifactory, Oracle, Redis, POSTMAN, SOAP UI, Insomnia, Azure Repos (Git Repositories for Code), Bitbucket, Terraform

Java/J2EE Developer

Feb 2017 – Dec 2021

Bright Life Care Insurance, Hyderabad, India

Responsibilities:

- Analyzed requirements to design and implement various microservices using technologies such as Java 8 (Streams, Lambda, Functional Programming, Generics), J2EE, Spring, Hibernate, Spring Cloud, Spring Batch, and STS, building microservices for enterprise software product delivery.
- Applied microservices architecture concepts, including service discovery and Spring Batch.
- Followed SOLID principles and relevant design patterns for structured design and development outcomes.
- Understood the project domain and applied MVC architecture with components and

dependency injection, using Spring REST for REST web services and Hibernate for the ORM layer, developing criteria queries for data interactions and MS Dynamics CRM.

- Created fetch XMLs by drawing parallels with RDBMS database queries.
- Utilized container architecture and orchestration tools like Docker and Kubernetes.
- Understood application performance and monitoring tools such as Data Dog, Azure Log Analytics, and New Relic, defining log analysis strategies and performing root cause analysis of issues for the team.
- Evaluated APM tools based on features and ease of integration, working on POCs to demonstrate them to the team.
- Enhanced the design of Spring Batch jobs for optimization, performed code review activities, and used Gradle as the build tool.
- Conducted discussions and walkthroughs of various sprint stories, tracked issues from previous releases and backlogs, and worked to fix them for upcoming releases.
- Updated JIRA issues as needed, participated in daily scrum discussions, sprint planning meetings, sprint retrospective meetings, tracked deliverables, generated reports, and sent weekly status reports to stakeholders.

Environment: Java 8, Spring Boot, UNIX, Microsoft Azure: (App Services, Functions, Logic Apps, Azure Data Factory, CSS, Azure SQL Database, Cosmos DB), JavaScript, Spring Cloud, Spring Batch, REST, Bitbucket, TypeScript, Dynamics CRM, Datadog, HTML 5, Angular 7/8, ReactJS, POSTMAN, Redis, Terraform.

Education Details:

Bachelor of Science – Acharya Nagarjuna University, Guntur, 2014
