PROFESSIONAL SUMMARY

Business Analyst with 5+ years of experience in data-driven problem-solving and process optimization for complex systems. Expertise includes comprehensive requirements gathering, data integrity management, and developing actionable insights to improve operational workflows. Utilizes tools such as Power BI, SQL, Excel, and Jira for advanced data analysis, report development, and visualization. Drives effective decision-making through meticulous trend analysis and clear communication of findings. Focuses on enhancing data quality and supporting analytical initiatives.

WORK EXPERIENCE

Cytora, Business Analyst	Nov 2023 to Present
- Gathered detailed business requirements from underwriting teams, translating complex commercial insurance rules into functional specifications and user stories for AI-driven risk assessment tools. - Designed future-state process workflows for commercial insurance risk digitization, implementing best practices that improved operational efficiencies and data quality across client platforms. - Developed analytical reports and dashboards using Power BI and Excel, interpreting key performance indicators to monitor the effectiveness of deployed AI solutions for commercial insurers. - Executed data integrity and validation routines on extracted underwriting data, ensuring high-quality inputs for generative AI models used in commercial insurance risk assessment. - Created clear, actionable user stories and acceptance criteria in an Agile environment, contributing to sprint planning and product iterations for AI platform enhancements. - Presented analytical findings and project deliverables to internal and external clients, driving alignment on goals and ensuring clarity regarding new AI features and platform capabilities. - Supported the end-to-end deployment of digital solutions, including developing training materials and conducting sessions for client teams on new AI-powered workflows. - Triaged and resolved various business and data-related issues, collaborating with engineering teams to ensure smooth operation and continuous improvement of AI-driven platforms. - Wrote SQL queries to extract and analyze data from various sources, supporting ad hoc reporting and in-depth 'what if' analysis for business insights. - Performed unit and integrated testing for new features and reporting tools, validating functionalities and data accuracy within the digitization platform before deployment.	

Makai Labs, Business Analyst	Jan 2020 to May 2022
- Translated complex business requirements into detailed user stories and defined acceptance criteria, guiding the development of AI-enabled process automation solutions. - Identified workflow inefficiencies within client processes and implemented automation solutions, significantly improving operational efficiency and reducing manual effort for end-users. - Facilitated Agile ceremonies, including sprint planning, backlog grooming, and user acceptance testing (UAT), contributing to the timely and quality delivery of software releases. - Developed analytical models using Excel and Power Query to identify emerging trends in operational data, providing data-driven recommendations for enhancing AI-powered solutions. - Executed rigorous data validation routines on diverse datasets, ensuring the accuracy and reliability of information utilized by the core AI-enabled process automation applications. - Designed and implemented SQL-based data extraction processes to support the development of AI-enabled reporting tools, enhancing data accessibility and analytical capabilities. - Maintained interactive dashboards in Power BI, visualizing key performance indicators related to automated workflows and delivering actionable insights for continuous improvement initiatives. - Provided tier-2 support for advanced process automation software, triaging user-reported issues and performing root cause analysis to resolve incidents promptly. - Created comprehensive business and technical specification documents for new AI-driven features, ensuring transparent communication of requirements for development teams. - Executed comprehensive unit and integrated testing protocols for process automation software, identifying defects and verifying feature functionality to ensure reliable system performance.	

TECHNICAL SKILLS

Methodologies: Agile Methodologies, Scrum, User Acceptance Testing (UAT), Software Development Life Cycle (SDLC)
Business Analysis Tools: Jira, Confluence, Microsoft Visio, Lucidchart, SharePoint, Microsoft PowerPoint, Microsoft Project
Programming & Scripting: SQL, Python, R, DAX, M Language, VBA
Databases & Data Management: Microsoft SQL Server, PostgreSQL, MySQL, Database Design, Data Warehousing, ETL Processes, Data Quality Management, Data Validation Techniques, Data Governance
Business Intelligence & Reporting: Power BI, Power Query, Excel, Excel Macros, Tableau, Data Visualization, Report Development

EDUCATION

Masters, Master’s in information technology and management	
Indiana Wesleyan University, Marion, IN	CGPA3.93/4.0
Bachelors, Bachelors in Textile Engineering	
Textile Engineering, Vignan University, AP, India	CGPA 7.5/10
