PROFESSIONAL SUMMARY

Data Analyst with over 4 years of experience transforming data into actionable business insights and strategic solutions. Proficient in Python, R, SQL, and skilled in data visualization tools like Tableau and Power BI. Adept at managing databases (MySQL, PostgreSQL, SQL Server) and performing statistical analysis using SPSS, SAS, and hypothesis testing. Experienced in cloud technologies (AWS, Azure) and data manipulation with Excel and Pandas. Strong background in data cleaning, critical thinking, and problem-solving, with a proven ability to enhance operational efficiency through data-driven insights.

TECHNICAL KNOWLEDGE

Programming Languages: Python, R, SQL, VBA, C++, C#

IDE's: Visual Studio Code, Jupyter Notebook, R Studio

Data Visualization: Tableau, Power BI, Flourish, Google Analytics, SSRS, Looker

Data Analytics: Data Manipulation, Data Cleaning, Data Wrangling, Data Modelling, Predictive Analysis

Database Management: MySQL, PostgreSQL, Microsoft SQL Server, Oracle RDBMS

Statistical Analysis: SPSS, SAS, Regression Analysis, Hypothesis Testing, A/B Testing

Cloud Technologies: AWS (S3, RDS, Redshift, Lambda, Glue), Azure, Databricks, Snowflake (Snowpipe, Snowpark)

ETL Tools: Talend, Alteryx, Snowflake, Airflow, SSIS, Informatica, DBT

Skills and Tools: Git, GitHub, Qlik, DOMO, Jira, Docker, Looker, Git Bash, CI/CD, Advanced Excel, Word, MS Visio

Methodologies: Agile/Scrum, SDLC, Waterfall

WORK EXPERIENCE

Principal Financial Group

Worcester, MA

Data Analyst (Remote)

Jan 2024 – Present

- Analyze large datasets using Python and SQL, identifying trends and patterns to optimize marketing strategies and enhance customer targeting.
- Utilized Agile methodologies in data operations to enhance project delivery speed ensuring timely insights and faster decision-making processes within the organization.
- Conduct regression analysis and hypothesis testing using SPSS and SAS to forecast market trends, contributing to a 15% reduction in forecasting errors.
- Utilize AWS (S3, RDS, Glue) to implement cloud-based data storage solutions, improving data accessibility and security by 40%.
- Implement data pipelines using Airflow and Talend, automating data processing tasks and reducing manual work by 50%.
- Execute optimized SQL queries, demonstrating a keen ability to navigate and analyze databases, contributing to a 12% improvement in data accuracy and accessibility.
- Implemented robust data loading procedures to efficiently transfer extracted data into the target system while maintaining data integrity.
- Utilized Databricks notebooks for collaborative data analysis, enabling team members to interactively explore and visualize data, facilitating dynamic decision-making.
- Adept in gathering, cleaning, and integrating data from diverse sources, applying statistical techniques, and creating informative visualizations using tools like Tableau or Power BI to communicate insights effectively.

Bytecraft System

Hyderabad, IND

Data Analyst

Sep 2019 – Jul 2022

- Collaborate with the Scrum team and business managers for continuous product integration through effective sprint planning and task management.
- Revamped statistical models, enhancing prediction accuracy, and contributing a 10% improvised forecasting precision.
- Provided continuous maintenance, development, and bug fixing for existing and new Power BI reports, ensuring high performance and reliability.
- Process and integrate analytics product data and user data using SQL and Power BI to analyze data and generate actionable insights.
- Developed and implemented ETL (Extract, Transform, Load) pipelines to transfer data between MongoDB and other data sources such as relational databases, flat files, and APIs.
- Maintained ETL pipelines connecting data sources to data warehouse, resulting in 15% improvement in integration efficiency and data validation.
- Reengineered data pre-processing using custom Python scripts, reducing errors by 20% and improving data throughput time by 34%, thereby enhancing the overall analytics framework.
- Performed ad-hoc analysis in response to business queries delivering results to stakeholders to support informed decision making.

ACADEMIC PROJECTS

DATA WAREHOUSING AND BUSINESS INTELLIGENCE (Talend, Python, Tableau, PostgreSQL)

- Conducted initial data profiling and complex analysis for data quality purposes using Python and loaded tables from multiple data sources.
- Designed ETL workflow for data integration to incorporate data from different sources of PostgreSQL database.
- Identified measures, dimensions and facts and implemented a snowflake schema with hierarchies and SCDs scrutinizing data governance.
- Loaded data to warehouse using ETL processes and built OLAP cube for rapid data analysis saving 30% of time.
- Executed business intelligence for reports and dashboard generation in Tableau to identify various trends in usage of Spotify services.

YOUTUBE DATA LAKE ANALYSIS (AWS Lambda, Glue, Athena, PySpark, Parquet, QuickSight)

- Implemented various stages for data storage like staging area, cleansed data, and analytical data systems area using AWS S3
- Utilized AWS Glue and Lambda layers for data catalog creation and data cleansing to store data in Parquet from JSON
- Built an ETL pipeline using AWS Athena and AWS Glue studio to generate an analytical version.
- Designed a dashboard using QuickSight to visualize the insights on data and important KPIs.

PREDICTION OF LOAN DEFAULTATION (MySQL, Power BI, Python, Machine Learning)

- Conducted extensive exploratory and statistical analysis to identify key variables, patterns, outliers, and missing values in the datasets
- Utilized SMOTE techniques and KNN imputation to balance the dataset and missing values to improve machine learning model performance.
- Built and compared multiple classification models using Logistic regression, KNN, Random Forest, and Decision Trees
- Compared multiple classification reports of all models and Random Forest performed with highest accuracy and Recall values

SMART PRICING ON AIRBNB (Python, Data Viz., Machine Learning)

- Data preparation and data wrangling using Dataiku visual recipes and other data science libraries
- Analyze data and performed statistical analysis on complex data sets using python to understand user behavioral patterns
- Integrated Python libraries such as Pandas, NumPy, and Seaborn to the dataset to answer a series of questions
- Performed data pre-processing on Airbnb dataset to discover significant attributes for price prediction using Grid Search

CERTIFICATIONS

Google Data Analytics Professional Certificate

AWS: Building Serverless Applications [C]

EDUCATION

Northeastern University

Master of Science GPA: 3.75

Relevant Courses: Operations Research, Statistics, Data Management and Database Design, Cloud Computing, Data Mining in Engineering, Data Warehousing and Business Intelligence

Boston, MA

May 2024

Savitribai Phule Pune University

Bachelor of Engineering

Pune, India

May 2020
