

Srilekha A
DevOps Engineer
asrilekha19@gmail.com
+1(314)-680-2221
Frisco, TX, 75034

CAREER SUMMARY:

- Over 4+ years of experience in DevOps and Build and Release and Middleware Engineering in Automating, Building, Deploying, and Releasing of code from one environment to another environment.
- Strong expertise on DevOps concepts like Continuous Integration (CI), Continuous delivery (CD) and Infrastructure as Code, Cloud Computing to help teams deliver a better, reliable and production environments.
- Hands-on experience on with the latest cloud technologies like Amazon Web Services (AWS) in developing multiple applications utilizing the AWS stack focusing on high-availability, fault tolerance and auto-scaling.
- Experience on Multiple AWS instances, set the security groups, Elastic Load Balancer and AMIs, Auto scaling to design cost effective, fault tolerant and highly available systems.
- Experienced with Kubernetes, Docker Swarm, and Azure deployments.
- Expertise in Automation, Configuring, deploying utilizing almost the entire AWS stack (EC2, ECS, ELB, S3, EBS, VPC, AMI, SNS, RDS, IAM, Route 53, Auto scaling, Cloud Front, Cloud Watch, Cloud Trail, Cloud Formation, Security Groups) focusing on fault tolerance, high availability, and auto-scaling.
- Expertise in creating complex and custom IAM policies, Roles, and user management for delegated users within AWS and experience in developing AWS cloud formation templates to create custom sized VPC, Subnets, EC2 instances, ELB and security groups.
- Utilized AWS Cloud watch to monitor environment for operational & performance metrics during load testing.
- Set-up databases in AWS using RDS, storage using S3 bucket and configuring instance backups to S3 bucket.
- Design EC2 instance architecture to meet high availability application architecture and security parameters.
- Configured CICD pipeline (Jenkins) to setup continuous testing and continuous delivery of the artifacts on to the staging environments.
- Created own OAuth2.0 resource servers and define custom scopes in them using Amazon Cognito.
- Hands on Experience in using configuration management tools like Chef/Ansible/Open stack.
- Experience in Writing Chef Recipes to automate our build/deployment process and do an overall process improvement to any manual processes.
- Used Azure Kubernetes service to deploy a managed Kubernetes cluster in Azure and created an AKS cluster in the Azure portal, with the Azure CLI, also used template driven deployment options such as Resource Manager templates and terraform.
- Built out Infrastructure as a Service (IAAS) private cloud Open Stack and managed deployment of Micro services using Kubernetes, Docker, etc. to production environment. Performed server monitoring, Application monitoring, Capacity Planning and log monitoring using Nagios, Cacti, Zabbix and Splunk.
- Worked with configuring Azure Virtual Networks (VNet), Scale Sets, Subnets, Azure network settings, DNS settings, security policies and routing.
- Automated application deployment from Git repository, on to the Docker container platform.
- Utilized Kubernetes as a platform to provide a platform for automating the deployments, scaling and operation of application containers across a cluster of hosts. Worked closely with development teams and test engineers for EC2 size optimization and Docker build Containers.
- Container management using Docker by writing Docker file in JSON format and place the automated build in the Docker Hub. Managed deployments using Kubernetes, created local clusters and deployed application container.

- Deployed servers using Puppet, and Puppet DB for configuration management to existing infrastructure and Implemented Puppet 3.8 manifests and Modules to deploy the builds for Dev., QA and production.
- Worked with IAM service creating new IAM users & groups, defining roles and policies and Identity providers. Experience working on several Docker components like Docker Engine, Hub, Machine, creating Docker images, Compose, Docker Registry and handling multiple images primarily for middleware installations and domain configurations.
- Expertise in using build tools like MAVEN and ANT for the building of deployable artifacts such as war & ear from source code.
- Used Catalon & Perfecto for automation testing.
- Understanding with the standards and great practices in Software Configuration Management (SCM) in Agile-SCRUM and Waterfall methodologies and Implemented Change Management Process for tracking different clients and setup tracking using JIRA/ Service Now.
- Experienced in troubleshooting, automating various builds and deployments using ANT, MAVEN, Perl, Ruby, MS Build, and Shell Scripts and deploying to web and application servers like Web Sphere, Web Logic, and Tomcat.

TECHNICAL SKILLS:

Programming Languages	C, C++, Java, C#, .Net
Databases	SQL, PL/SQL, Oracle, SQL Server, DB2.
Web Technologies	HTML, XML, SOAP, WSDL, UDDI, XSD, XSL, XPATH.
Operating Systems	UNIX, Linux, Solaris, Red Hat, Windows, Windows Server.
Scripting Languages	SHELL, PERL, BASH, POWERSHELL, PYTHON, RUBY.
Version Control Tools	TFS, CVS, SVN, GIT, GITHUB, Perforce.
Application/Webserver	Oracle Web logic Server 11g, Apache Tomcat, Oracle Application Server 10g, BEA Web Logic 8.1/9.2, Web Sphere, JBoss, Tomcat, IIS.
Build and Release Engineering/ DevOps	Jenkins, Cruise Control, Remedy, Vagrant, Puppet, Fish, AWS, Nagios, Rally, Hudson, Chef, Ant, Maven, Gradle, Terraform, HUDSON, MS Build, Docker, Kubernetes and Bamboo.
AWS Services	EC2, ELB, S3, Glacier, VPC, RDS, IAM, Cloud Formation, Cloud Watch, Cloud trail, SNS, SQS, SWF, EBS, Amazon Direct Connect, Ops Works.

PROFESSIONAL EXPERIENCES:

Client: Bullhorn-MA
Role: DevOps Engineer
Responsibilities:

Nov 2023-Present

- Created Azure services such as computer virtual machines, azure storage, and Azure active directory, SQL Database, Azure DNS, and Azure Application Insights.
- Azure Storage Planning Migrated Blob Storage for document and media file, Table storage for structured datasets, Queue storage for reliable messaging for workflow processing, and file storage to share file data.
- Created the pods in the Open Shift Environment by using the Docker File and Created clusters from the Docker containers with the help of Kubernetes on the OpenShift platform.

- Responsible for the maintenance of multiple App servers like WebLogic, Tomcat, Glassfish, and OBIEE servers in Development, Integration, Acceptance, and Production environments.
- Monitored and fixed the error logs, and tuned parameters on Weblogic environments.
- Configured and setup Secure Sockets Layers (SSL) for data encryption and client authentication.
- Support development with updating Oracle quarterly patches and WebLogic and OBIEE upgrades. Quarterly passwords change across the board.
- Support and maintains WebLogic, Glassfish, Tomcat, and Sun app servers and Apache Web Servers.
- Maintains Apache and SunOne (iPlanet) web servers for all the environments.
Created EKS cluster in different environments to orchestrate the deployment, scaling, and management of Docker containers.
- Developed cloud formation templates to create EC2 instances, S3, RDS, Cloud watch dashboards, Canaries, Elasticache, Elasticsearch, Route53, SNS, SQS, KMS, VPC, subnets, ELB, security groups, and install user data and LAMP stack on EC2 instances.
- Managed clusters using Kubernetes and worked on creating many pods, replication controllers, services, deployments, labels, and health checks.
- Created a private cloud using Kubernetes that supports DEV, TEST, and PROD environments. Azure AD - Implemented Azure AD using AD connect, configured SSO and multifactor Authentication. Also configured SSO from Windows based computer which is joined to Azure AD. Implemented and managed AD synchronization.
- Administered and implemented the CI tool Jenkins for an automated build.
- Installed AppDynamics APM agent on the Linux host and instrumented the configuration settings with the controller.
- Integrated AppDynamics agent with coherence (cache servers) and Oracle service bus (fusion middleware) which gave the complete picture as an enterprise.
- Configured and administered multiple server agents and machine agents on production and non-production environments.

Environment: WebLogic 10.3.5/10.3.6(11g), Apache 2.x Server, SUNONE, Tomcat 7/8, Glassfish 3.1.2.18, Red Hat Linux, Solaris, F5 Load Balancer, Oracle, JDK 1.7/1.8 OpenAM 13.5, IdentityIQ 7.1. AWS EC2, S3, Azure, Cloud Formation, Dynamo DB, VPC, IAM, Cloud Watch, EKS, Jenkins, Ansible.

Client: Meta - MO

July 2023- Oct 2023

Role: DevOps Engineer

Responsibilities:

- Involved in working on the services of AWS like EC2, Elastic Search, VPC, Subnets, Routing tables, Internet gateways, IAM, Route53, VPC peering, S3, ELB, RDS, Security Groups, Cognito, Cloud Watch, SNS on AWS.
- Created AWS Launch configurations based on customized AMI to configure auto scaling groups and Implemented AWS solutions using EC2, S3, RDS, AMI, Dynamo DB, Route53, Security Groups, EBS, ELB.
- Managing AWS infrastructure and automation with CLI and API. Working on Inbound and Outbound services with automation Chef. Deployed multiple resources simultaneously, using Cloud Formation templates in AWS.
- Managing AWS EC2 instances utilizing Auto Scaling, Elastic Load Balancing and Glacier for our QA environments as well as infrastructure servers for GIT and Chef.
- Created own OAuth2.0 resource servers and define custom scopes in them using Amazon Cognito.
- Designed and developed AWS Cloud Formation templates to create EC2 instances, custom sized VPC, subnets.
- Used Cloud Front to deliver content from AWS edge locations to users, allowing for further reduction of load on front-end servers.
- Created functions and assigned roles in AWS Lambda to run python scripts, and AWS Lambda using java to perform event driven processing. Created Lambda jobs and configured Roles using AWSCLI.

- Worked on Jenkins for integrating maven to generate builds, conduct unit tests with Junit Plugin, Regression tests with Selenium, Nexus Art factory for storing jar, war and ear files, AppDynamics & ELK Stack for monitoring, SonarQube for code coverage reports and JIRA for document generation.
- Wrote shell scripts to automate the process the adding SSH-keys and generate passwords and then integrated the scripts to Jenkins.
- Named service and secondary replicas for scalability and availability. Ability to write Shell & Perl scripting.
- Configuring and managing an ELK stack, setup the Elastic search ELK Stack to collect, search and analyse log files across the servers. Used Kubernetes to manage containerized applications using its nodes, Config Maps, selector, Services & deployed application containers as Pods.
- Built Jenkins pipeline to drive all micro services builds out to the Docker registry and then deployed to Kubernetes, created pods and managed using Kubernetes.
- Orchestrated and migrated CI/CD processes using Cloud Formation and Terraform Templates and Containerized the infrastructure using Docker, which was setup in Vagrant, AWS and VPCs.
- Collaborate in the automation of AWS infrastructure via Terraform and Jenkins - software and services configuration via chef cookbooks.
- Created additional Docker Slave Nodes for Jenkins using custom Docker Images and pulled them to ECR.
- Implemented a Continuous Delivery pipeline with Docker, and GitHub and AWS.
- Worked on applying patches and recommending necessary security fixes for web Application servers.
- Scripting in multiple languages on UNIX, LINUX and Windows - Batch, Python, Shell script etc.
- Troubleshoot the build issue during the Jenkins build process.
- Integration and analysis of competing IOT technologies. Application, device and client development. AWS IOT environments with CI/CD focus on automated testing and deployment
- Handling tickets/tasks and Troubleshoot SQL Server performance issues for internal and external customers and Provide resolutions.
- Monitored and tune databases, indexes, stored procedures and Server Performance using Performance Monitoring tools for Microsoft SQL Server.
- Maintained individual service accounts for SQL server services on cluster with different security groups to raise security mark.
- Resolved system issues and inconsistencies in coordination with quality assurance and engineering teams.

Environment: Red Hat Linux 5.0, Java 1.8, Eclipse, Jenkins, Spring Batch, SQL,SVN, GIT, ANT, Jenkins, ELK stack, Maven, Web Logic, Apache Tomcat, Shell, Perl, Puppet, Chef, Nexus, AWS, Ec2, Junit, JIRA, Rally, Catalon, Python, SQL.

Client: India - ICICI Bank

August 2018- dec 2021

Role: Build & Release Engineer

Responsibilities:

- Developed and maintained integration and release processes.
- Used Ant scripts and Perl/Shell to automate build and deployment Process.
- Developed UNIX and Perl Scripts for the purpose of manual deployment of the code to the different environments
- and E-mail the team when the build is completed.
- Installed and Configured the Nexus repository manager for sharing the artifacts within the company.
- Automated the builds using Bamboo CI server.
- Developed and maintained Perl/Shell scripts for build and release tasks.
- Managed and reviewed Kafka logging and transitioned application from MSSQL-based logging
- Synthesized Apache Storm and Apache Kafka to gather logging information and deliver data to HDFS
- Automated the process of deployment to Apache Tomcat Application Servers by developing Perl Scripts.
- Deployed the static content into the web servers like Tomcat, I Planet, and IBM HTTP Server.

- Used SOAP UI and REST to test request/response of the web service functionality, also verified using assertions.
- Creating Automated build process by using Jenkins CI tool and Cruise Control.
- Used Perforce for the purpose of Software Configuration management and maintaining the versions of the Symantec's Website Code.
- Designed and developed the tools to allow efficient configuration management, build and release of software developed in J2EE, XML and DB2 databases.
- Assisted end-to-end release process from the planning of release content through to actual release deployment to production.
- Used Maven and Gradle as a build tools on java projects for the development of build artifacts on the source code.
- Deployed the Java applications into Apache Tomcat Application Servers.
- Executed the planning of product software releases.
- Performed clean builds according to scheduled releases.
- Design and document CI/CD tools configuration management.
- Involved in Administrator Activities.
- Performed Builds for various Environments like QA, Integration, UAT and Production Environment.
- Coordinated with developers, Business Analyst and Managers to make sure that code is deployed in the Production environment.

Environment: UNIX, Sun Solaris, SVN, ANT, NEXUS, Shell /Perl Scripts, XML, Business Objects, Soap UI, JAVA, J2EE, Jenkins, Maven, Tomcat, TFS, Perforce, Web Logic, Oracle, Windows, Servlets, PL SQL, Apache Application Server, SQL.
