

FNU TEJASWI

Data Analyst | Data Scientist | Machine Learning Engineer

323-250-2134 | tejaswi.dabas1299@gmail.com | www.linkedin.com/in/tejasdabas | github.com/tejaswidabas123

SUMMARY

AI/ML Engineer with 4+ years of experience in data analytics, machine learning, and AI model development, specializing in scalable data pipelines, predictive modeling, and cloud platforms like AWS and GCP. Proficient in Python, SQL, TensorFlow, and NLP, with a record of improving forecasting accuracy, user engagement, and business performance.

EDUCATION

Master's in Applied Data Analytics | Boston University 07/2022-01/2024
B. Tech in Electronics/Communication Engineering | GGSIP University 05/2017-07/2021

PROFESSIONAL EXPERIENCE

AI/ML Engineer | Radical AI | New York, NY 03/2024-Present

- Engineered scalable AI copilots for educational platforms using Vertex AI and OpenAI, improving content personalization and user engagement by 20%
- Orchestrated end-to-end CI/CD pipelines on Google Cloud Platform (GCP) to automate model training, testing, and deployment, ensuring faster iterations and seamless deployment
- Innovated adaptive ML algorithms on Google Cloud to analyze study materials, auto-generate quizzes, and boost user retention rates by 15%
- Streamlined data pipelines and enhanced semantic search through LangChain coding and vector embeddings (XLNet, USE, ALBERT)
- Implemented PySpark for large-scale data processing, enabling real-time analytics and reducing processing time
- Automated anomaly detection in model performance metrics, improving monitoring accuracy by 30% and reducing downtime
- Integrated API integrations with Fast API to enable seamless model deployment, cutting deployment time

Data Science Research Assistant | Questrom School of Business | Boston, MA 01/2023-01/2024

- Led experimental design and feature engineering, integrating CNNs and RNNs to refine forecasting accuracy and extract insights from textual data
- Implemented hypothesis testing (p-tests, t-tests) and ML models, achieving 90% accuracy in statistical evaluations for consumer spending forecasts
- Built end-to-end PySpark workflows for ETL pipelines, improving data preprocessing time by 35% and reducing manual errors
- Transformed 1TB+ of health data for injury analysis, applying RAG techniques to ensure quality and extract actionable insights
- Designed interactive visualizations in PowerBI, translating model outputs into actionable insights for stakeholders

Machine Learning Engineer | Digital Web Launcher 06/2021-08/2022

- Deployed end-to-end machine learning pipelines (TensorFlow, MLflow) to optimize marketing strategies, increasing customer interactions by 15% and improving revenue growth
- Performed sentiment analysis using NLP, improving strategic decision-making based on consumer insights
- Integrated feature engineering automation tools to optimize model performance, reducing time-to-market by 25%
- Optimized PySpark pipelines for churn prediction, reducing processing times by 20% and enabling targeted campaigns that boosted retention

Machine Learning Engineer | Career Launcher 01/2021-03/2021

- Enhanced stock market forecasts by 28% through predictive modeling (regression, gradient boosting, LSTM, and XGBoost)
- Improved end-to-end data workflows by 30% through advanced algorithm implementations for real-time trend analysis
- Developed CI/CD pipelines to automate model deployment, reducing update cycles by 40% and increasing system uptime
- Automated data ingestion pipelines using ETL workflows, cutting manual processing time by 50%
- Utilized PySpark to scale data modeling workflows, improving scalability and processing efficiency

Data Analyst | Analytics Club 06/2020-09/2020

- Conducted data assessments using Python, SQL, and Excel, delivering insights to enhance corporate strategies
- Created 5 interactive dashboards in Tableau and PowerBI, simplifying complex data and enabling data-driven decisions simplifying complex data into clear insights for stakeholders, and made diverse report types by integrating analyses from SPSS and SAS

- Executed end-to-end reporting pipelines, integrating CI/CD workflows to automate dashboard updates, saving 10+ hours/week
- Designed custom SQL queries to extract and clean data, reducing reporting time by 25%
- Collaborated with marketing teams to optimize targeting strategies, improving ROI

TECHNICAL SKILLS

Programming Languages: Python, R

Data Analytics and Data Visualization: [Tableau](#), [PowerBI](#), QlikSight, Excel, SAS, SPSS, Alteryx, MATLAB

Python Libraries: TensorFlow, Pandas, NumPy, Scikit-Learn, Keras, PyTorch, Matplotlib, SciPy

Databases: SQL, MySQL, NoSQL, Postgres

Data Science and ML: NLP, Statistical Analysis, Advanced Analytics, Snowflake, Apache Spark, CNN, RNN, Apache Kafka, Big Data, Data Modeling, Data Mining, Artificial Intelligence, Data Management, Regression, LLM, MLOps, ETL

Cloud Technologies: Amazon Web Services AWS, S3, Redshift, EC2, Google Cloud Platform (GCP), Azure, dbt, Oracle

Project Management: Agile Methodologies, Jira, Github, Databricks, Git, Looker, CRM, ERP, SAP, Salesforce

PROJECTS

[AI-Powered Personalized Cover Letter Generator:](#) (Skills: SerpAPI, GPT-3.5, Python, Flask, NLP)

- Developed an AI-driven cover letter generator using GPT-3.5 and SerpAPI to analyze job descriptions, extract keywords, and automate personalized drafts, reducing manual effort by 60%
- Built Flask-based web app with REST APIs, enabling seamless customization and integration with ATS systems, improving customization accuracy by 70%
- Optimized API performance by reducing query response time by 35% and supporting 500+ API calls/day for scalable performance

[Indoor Navigation System:](#) (Skills: Computer Vision, TensorFlow, OpenCV, AWS IoT)

- Engineered a real-time indoor navigation system for visually impaired users, leveraging YOLOv5 for 95% object detection accuracy and Text-to-Speech APIs for voice-guided navigation
- Devised AWS IoT for remote monitoring and updates, achieving a 40% reduction in processing latency and improving scalability
- Revamped camera processing workflows with OpenCV and path-planning algorithms, boosting navigation efficiency by 50% across 10 environments

[Music Genre Recommendation:](#) (Skills: CNN, SVM, BERT, LibROSA, Spotify API)

- Constructed a deep learning pipeline combining CNNs and BERT embeddings to classify music genres with 95% accuracy based on audio and lyrics
- Used Spotify API to recommend playlists in real time, improving user satisfaction scores by 20% through data-driven customization
- feature extraction using LibROSA and MFCCs, reducing processing time by 40% and enabling fast model retraining
