

ABHIGNYA MANDA

DATA ANALYST

TX, USA | Abhignyamanda@gmail.com | (201) 979-2601 | [LinkedIn](#)

SUMMARY

Data Analyst with 4+ years of experience delivering healthcare payer and financial services analytics across claims, member risk, care management, digital payments, and fraud monitoring. Skilled in Python, SQL, Power BI, Tableau, AWS, Azure, and Snowflake to build governed ETL workflows, dashboards, statistical analyses, and predictive insights. Experienced in data quality, KPI definition, anomaly detection, hypothesis testing, stakeholder collaboration, HIPAA-compliant reporting, financial risk controls, and Agile delivery across enterprise environments.

TECHNICAL SKILLS

Programming & Analytics:	Python, SQL, R, SAS, Scala, Pandas, NumPy, SciPy, Scikit-learn, TensorFlow
Business Intelligence:	Power BI (DAX, Power Query), Tableau, Advanced Excel (Pivot Tables, VLOOKUP, VBA), SSRS
Data Engineering & ETL:	AWS Glue, Azure Data Factory, Informatica, Alteryx, SSIS, dbt, ETL/ELT, incremental loading, data validation
Cloud & Data Platforms:	AWS (S3, Athena, Redshift, EC2, RDS, Lambda), Azure (Blob Storage, Synapse Analytics), Snowflake
Databases & Modeling:	PostgreSQL, MySQL, Oracle, SQL Server, dimensional modeling, data warehousing, schema optimization
Statistics & Machine Learning:	Hypothesis Testing, ANOVA, A/B Testing, Regression, Classification, Clustering, Time-Series Forecasting, Anomaly Detection
Governance, Tools & Methods:	HIPAA, PHI, CMS Reporting, Financial Risk Analytics, Git, GitHub, Bitbucket, Jupyter Notebook, Agile, SDLC, CI/CD, Root Cause Analysis

WORK EXPERIENCE

Data Analyst | Cigna Healthcare | USA

Aug 2024 - Present

Project: *Enterprise Healthcare Claims, Member Risk & Care Management Analytics Platform*

- Developed an enterprise healthcare claims, member risk, and care management analytics platform that unified payer data to improve cost visibility, intervention planning, and operational decision-making.
- Built **Python** workflows with **Pandas** and **AWS Glue** to cleanse claims, eligibility, provider, and care-management data, improving analytics-ready dataset availability by **24%** for reporting teams.
- Optimized **SQL** transformations in **Amazon Redshift** to reconcile duplicate claims, coding inconsistencies, and eligibility gaps, accelerating recurring medical-cost and utilization analysis by **18%** across operations.
- Created **Power BI** dashboards with **DAX** and **Power Query** to monitor medical costs, care gaps, utilization patterns, provider performance, and member risk for healthcare leaders.
- Applied **Scikit-learn** models to identify members with rising utilization and avoidable care risks, improving prioritization accuracy by **21%** for targeted care-management outreach and interventions.
- Performed hypothesis testing and **ANOVA** across member cohorts to evaluate utilization differences, intervention outcomes, and cost drivers, translating statistical findings into recommendations for program optimization.
- Governed healthcare data across **AWS S3** and **Redshift** through role-based access, validation controls, lineage documentation, and audit-ready processes aligned with **HIPAA** and **CMS** reporting requirements.
- Collaborated with clinical, claims, provider, finance, and engineering teams through **Agile** delivery to define KPIs, validate outputs, support **UAT**, and stabilize production reporting releases.

Project: *Digital Payments Fraud Monitoring & Customer Transaction Intelligence Platform*

- Developed a digital payments fraud monitoring and customer transaction intelligence platform that consolidated account, payment, device, and channel data for enterprise risk oversight and investigations.
- Engineered **Python** and **Alteryx** workflows to standardize transaction and customer data, generating behavioral features that improved suspicious-activity prioritization by **22%** across fraud operations teams.
- Refined complex **SQL** queries using **CTEs**, window functions, indexing, and validation logic, accelerating transaction investigations and recurring risk analysis by **19%** across enterprise banking datasets.
- Designed **Tableau** dashboards presenting transaction anomalies, customer risk tiers, alert volumes, investigation outcomes, and channel trends, enabling compliance leaders to manage exposure and reviewer capacity.
- Orchestrated **Azure Data Factory** pipelines with incremental loading, scheduling, validation, and exception handling to deliver reliable payment and customer data into governed analytics environments consistently.
- Modeled transaction scenarios in **Advanced Excel** using pivot tables and **VBA**, supporting threshold calibration, loss forecasting, control analysis, and operational planning for fraud management teams.
- Structured a **Snowflake** warehouse through **Informatica ETL** and dimensional modeling, organizing customer, account, transaction, and alert data for governed reporting and scalable analytical access.
- Validated monitoring rules through **A/B testing**, cohort analysis, and hypothesis testing, improving alert precision by **17%** while maintaining coverage of higher-risk transaction behaviors and channels.
- Partnered with fraud, compliance, operations, and engineering stakeholders throughout the **SDLC** to document logic, refine KPIs, test releases, and support successful production adoption.

EDUCATION

Master of Science in Computer and Information Science

- University of North Texas, TX, USA

Bachelor of Engineering in Electronics and Communication Engineering

- Malla Reddy Institute of Technology and Science, India
