EDUCATION

University of Washington

Seattle, WA

Bachelor of Science in Computer Science; GPA: 3.88

Jan 2026

Coursework: Data Structures and Algorithms, Operating Systems, Database Systems, Software Engineering

EXPERIENCE

CrowdStrike

Jun 2025 – Sep 2025

Software Engineering Intern

Remote

- Improved frontend performance by migrating a legacy table to a grid-based data viewer using React, TypeScript, HTML, CSS, and JavaScript, reducing render latency by 45% and cutting feature development time by 30%.
- Built user-focused features for an internal tool used by 300+ employees, streamlining daily workflows and improving usability ratings in user feedback surveys by 25%.
- Collaborated in an Agile development environment, using Git for version control while reviewing and contributing to 50+ pull requests, identifying bugs and improving component patterns and accessibility, which reduced QA issues by 40%.
- Developed and maintained reusable React/JavaScript components with Elastic UI and Recoil, increasing code reuse by 35% and improving design consistency across the app.
- Contributed backend improvements in Go, increasing API reliability and response times by 20%.

CrowdStrike

Jun 2024 – Sep 2024

Systems Engineer Intern

Remote

- Delivered consistent lab environments by automating provisioning with Ansible, Terraform, and Packer, eliminating configuration drift across 100+ distributed systems and reducing setup time by 70%.
- Increased system observability by integrating Zabbix, Prometheus, and Grafana, cutting incident detection time from hours to minutes and improving mean time to resolution (MTTR) by 60%.
- Improved deployment efficiency by automating setup and configuration processes, reducing manual errors by 80% and accelerating environment delivery by 50%.
- Collaborated with cross-functional teams to contribute to internal documentation and review infrastructure playbooks, reducing onboarding time for new engineers by 35% and improving reusability across multiple teams.

PROJECTS

Home Lab | Docker, Linux, Prometheus, Grafana

Jul 2024 – Present

- Maintained a home lab using Ubuntu Server and Docker containers, supporting over 15 self-hosted services and creating a flexible environment for testing and experimentation.
- Deployed Prometheus to collect and monitor more than 50 internet traffic metrics, providing real-time visibility into network performance and usage trends.
- Integrated Grafana dashboards, enabling efficient visualization and analysis of traffic patterns and system performance while reducing troubleshooting time by 40%.
- Used Python scripts to automate system health checks and alerting, ensuring continuous uptime and faster detection of network anomalies.

Self-Healing Infrastructure | AWS, GitHub Actions, Kubernetes, Ansible

Apr 2025 – Jun 2025

- Built a self-healing infrastructure system on AWS using Ansible, Prometheus, and custom remediation scripts to automatically detect and resolve over 10 common failure types, minimizing downtime by 70%.
- Integrated CI/CD pipelines with GitHub Actions to deploy infrastructure changes and remediation logic, cutting deployment time from hours to under 10 minutes.
- Containerized core remediation services and orchestrated them with Kubernetes, improving scalability and deployment consistency across multiple environments.

TECHNICAL SKILLS

Languages: Python, Go, C++, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks & Libraries: React, Elastic UI, Node.js, Express, Recoil

Developer Tools: Git (GitHub, Bitbucket), Docker, Linux, SSH, Prometheus, Grafana, Zabbix, Ansible, Terraform, Packer, Kubernetes, AWS, CI/CD (GitHub Actions), vSphere

Soft Skills: Communication, Collaboration, Adaptability, Initiative, Problem-Solving, Agile/Scrum
