

PROFESSIONAL SUMMARY:

- Over 6+ years of extensive hands-on experience with the MS SQL Server BI stack (SSIS, SSAS, SSRS) and Power BI, delivering end-to-end ETL solutions, advanced data modeling, OLAP cube development, and interactive dashboards & enterprise-scale business intelligence reporting for large-scale environments.
- Expert in ETL(SSIS) and DTS packages to perform data transfer from different server locations and heterogeneous sources like Oracle, Excel, CSV, XML, MS Word and Text Format Data.
- Experience in using SSIS Import and Export Wizard, SSIS designer and other package execution utilities for performing the ETL operations.
- Hands on Experience in SSIS Configuration, Logging, Procedural Error Handling and Data Error Handling.
- Involved in complex data mapping, modeling data and understanding business data relationships.
- Experience in using multiple transformations provided by SSIS such as script component, Lookup, Data Conversion, Conditional Split, Bulk Insert, Merge, Merge Join, Union All and Slowly Changing Dimension.
- Experience in creating various SSIS packages, troubleshoot errors and creating alerts using Send Mail tasks.
- Experience in designing reports using SQL Server Reporting Services, generated drill down report, parameterized report, linked report, sub reports, matrix dynamic and filter, charts in SSRS.
- Expert in presenting multi-platform data visualization like pie/bar/graph chart and Dunda's chart.
- Designing SSAS cube, writing MDX Queries, using Partition to manage and store the data and Translation. Deploying and processing SSAS cubes.
- Experienced in data conversion, transformation, relational and dimensional data modeling, normalization, and SQL Server Management Studio (SSMS).
- Experienced in developing OLAP Cubes, Dimensions using SQL Server Analysis Services (SSAS)
- Good SQL Server Administration skills including backup recovery, database maintenance, user authorization, Database creation, Tables, Indexes and Partitions.
- Expert in Data Extraction, Transforming and Loading (ETL) using SQL Server Integration Services (SSIS), Business Intelligence Development Studio (BIDS), Data Transform Services (DTS), Bulk Insert.
- Experience in using Tableau and Power BI to generate various reports.
- Proficient in Generating parameterized reports in SSRS.
- Experience in implementing the Indexes such as clustered index, non-clustered index, covering index appropriately on data structure to achieve faster data retrieval.
- Experience in designing and developing complex dashboards and reports in Power BI using DAX formulas to create custom measures, KPIs, and calculations.
- Created Scorecards/Dashboard in SSRS/Power BI.
- Strong analytical skills and ability to translate business requirements into data models and DAX formulas.
- Experience in writing Sub-queries, Joins, T-SQL queries to create database objects and to simplify complex queries involving different tables, and to create relationship between tables using foreign key and primary key.
- Experience in Database/Data Mart Design, stored procedures, Triggers, Indexes, Data Cleansing/Data Mining.
- Experience working with Agile and Waterfall methodologies in SDLC
- Able to work collaboratively, quickly understanding the system architect and business needs towards achieving goals.
- Excellent communication and management skills. Quick learner and excellent team player, ability to complete task on time.

Technical Skills:

Databases	MS SQL Server 2018, 2014, 2012, 2008, MS-Access, Oracle, MySQL, DB2
Programming language	T-SQL, PL/SQL, C, C++, .Net, vb.net
BI Tools	MSBI Stack (SSIS, SSRS, SSAS), Microsoft Visio, SQL Server Management Studio
Reporting Tool	SQL Server Reporting Services (SSRS), MS Excel, Power BI, Tableau Reporting Tool
ETL Tool	SQL Server Integration Services (SSIS), Data Transformation Services (DTS)

Professional Experience:

Heritage Insurance, Tampa, Florida

Mar 2024 to Present

Sr. Power BI Developer/ Data Analyst

- Collaborated with stakeholders to gather and analyze reporting requirements, ensuring alignment with banking business objectives and regulatory compliance.
- Designed and developed interactive Power BI reports and dashboards from scratch, including migration of legacy reports to modern BI solutions.
- Built custom visuals using Vega and Vega-Lite with JSON scripting, integrating them seamlessly into Power BI dashboards.
- Connected Power BI with Azure SQL, Azure Data Lake Storage, and Databricks to extract, clean, and transform data for enterprise reporting.
- Created and optimized SQL views, stored procedures, and queries to support reporting, data modeling, and performance improvement.
- Developed Power BI data models using star and snowflake schemas, optimizing relationships and reducing model size for faster performance.
- Implemented row-level security (RLS) to restrict data access based on user roles, enhancing data governance and compliance.
- Optimized Power BI reports using aggregations, query folding, and incremental refresh to handle large banking datasets efficiently.
- Created and maintained Power BI deployment pipelines, managing promotion of reports and datasets across development, test, and production environments.
- Automated dataset refresh schedules, monitored gateways, and troubleshoot refresh failures to ensure reliability of enterprise reporting.
- Designed and published Power BI apps for distribution to business users, providing centralized access to curated banking dashboards.
- Partnered with cross-functional teams to translate KPIs and business metrics into actionable dashboards, enabling leadership to track financial performance in real-time.
- Extensively used Power Query (M language) for ETL transformations, including data cleansing, shaping, and advanced functions.
- Migrated on-premises data to Azure Storage/Azure Data Lake Storage, supporting cloud-based BI initiatives.
- Worked on dimensional modeling, data cleansing, and data staging of operational banking sources using ETL processes, with experience in SSAS for OLAP solutions.
- Created SSIS packages to load data into SQL Server and reusable packages to extract data from multiple formats (Excel, CSV, XML) into the data warehouse.
- Developed desktop Power BI reports using Python scripts and integrated Power BI with Microsoft Teams and SharePoint for improved accessibility and collaboration.
- Implemented what-if parameters, drillthrough, and bookmarks for advanced interactivity in Power BI dashboards.
- Leveraged Azure Synapse and Databricks for pre-aggregations, significantly improving dashboard performance.
- Used Python/PySpark to fetch and transform data from multiple sources for enterprise-scale reporting.
- Collaborated with data engineering teams on Azure Synapse, Azure Data Factory, and Databricks integration to deliver scalable analytics solutions.
- Developed custom SSRS reports (tabular, matrix, drill-down, parameterized, cascading, conditional, sub-reports) to complement Power BI reporting.
- Conducted user training sessions and workshops, enabling business users to create self-service reports and improve data literacy.
- Documented data dictionaries, lineage, and governance processes to ensure clarity, consistency, and compliance across all analytics solutions.

Environment: MS SQL Server, Azure Synapse,, Azure SQL Database, Azure Data Factory , Azure Data Lake Storage,Power BI Desktop, Power BI Service, Python, Data Gateway, DAX, T SQL,SSIS,SSRS, SQL Profiler, XML, MS Excel.

Santander Bank, Dallas, TX

Nov 2022 – Mar 2024

MSBI /Power BI Developer

Responsibilities:

- Developed interactive Power BI dashboards and reports to support banking operations, financial reporting, and enterprise analytics.
- Oversaw day-to-day team activities including code review, year-end processing, and production support for database/BI applications.
- Optimized and updated logical and physical data models to support new and existing data warehouse projects.
- Designed Power BI data models with multiple fact and dimension tables, working with both live and imported data, and configured Power BI Gateway to schedule daily dataset refreshes.
- Published Power BI reports and dashboards to the Power BI Service, ensuring timely delivery of financial insights to stakeholders.

- Developed dimensional (DMR) and relational reports using lists, crosstabs, charts, unions, joins, drill-up/drill-down, and bursting techniques.
- Analyzed database logs and materialized views to optimize report performance for large datasets.
- Used Power Query and debugger tools to validate mappings, monitor data flows, and troubleshoot complex SQL queries
- Designed and implemented enterprise and departmental business intelligence and data warehousing solutions to support production data integration systems.
- Developed and optimized T-SQL queries for Azure SQL Database and Azure SQL Data Warehouse with a focus on query performance and optimization.
- Collaborated with architects and end-users to map legacy banking systems to the data warehouse.
- Created advanced DAX expressions and implemented partitions in tabular models to support Power BI reporting requirements.
- Enabled self-service BI capabilities using Power BI, empowering business users with on-demand insights.
- Installed and configured Enterprise and Personal Gateways in Power BI Service for secure and reliable data access.

Environment: Microsoft Power BI (DAX, Power Query, Power Pivot, Power View, Power Map), SQL Server 2016, Oracle 12c, Advanced Query Tool v9, Windows XP & UNIX server.

UCare, Plano, Texas

May 2020 - Oct 2022

MSBI/Power BI Developer

Responsibilities:

- Interacted with business resources on a daily basis for analyze business processes, requirements progress and deliverables.
- Used various Transformations such as For loop container, For Each loop container, Execute package task, FTP task, Bulk Insert task, Script task In SSIS Control Flow and Row sampling, Lookup, aggregate grouping in SSIS Dataflow.
- Designing, developing and testing of the ETL (Extract, Transformation and Load) strategy to populate the data from various source systems feeds using SSIS.
- Created SSIS packages for File transfer from one location to the other using FTP task with Master SSIS Package to run all other packages.
- Created packages using various control flow task such as data flow task, execute SQL task.
- Created SSIS Packages/projects to move data from source to destination programmatic by using Visual Studio 2014.
- Creating reports using SQL Reporting Services (SSRS) for customized and ad-hoc Queries.
- Generated monthly reports and budget analysis to drive forecast production plan with SQL Server Reporting Services (SSRS).
- Used SSIS to create ETL packages to Validate, Extract, Transform and Load data to Transaction and Data Warehouse.
- Created Dashboards with interactive views, trends and drill downs.
- Involved in designing and developing Data Warehouses, Data marts and Business Intelligence using multi-dimensional models such as Star Schemas and Snowflake Schema for generating reports using SSRS.
- Developed robust data models in Power BI using star and snowflake schema to optimize performance.
- Created complex DAX measures and calculated columns for KPIs, trend analysis, and dynamic reporting.
- Published Workbooks and Dashboards to the Tableau server.
- Created database objects like tables, users, roles, stored procedures, triggers.
- Performance Tuning of Stored Procedures and SQL queries using SQL Profiler and Index Tuning Wizard in SSIS.
- Administered SQL Server with Client/Server tools including SQL Server Enterprise Manager, Profiler and Query Analyze.
- Designed ETL data flows using SSIS, creating mappings/workflows to extract data from SQL Server and Data Migration and Transformation from SQL Server/Access/Excel Sheets using SQL Server SSIS.
- Involved in automating SSIS Packages using SQL Server Agent Jobs. Generated Parameterized reports, Sub reports, Drill down and Drill through reports using SQL Server Reporting Services (SSRS) working along with MDX queries.
- Experience working with DAX Queries, functions and statements to create complex calculations.
- Debugged and tested SSIS packages, Stored Procedures, configuration files and implemented best practices packages to maintain optimal performance.
- Perform data mining and create interactive reports and dashboards using tools like Power BI and Excel.
- Developed complex stored procedure using T-SQL to generate Ad hoc reports using SSRS.
- Proficient in Azure Data Factory, using it to create and manage ETL processes, as well as integrating with other Azure services like Azure SQL Database, Azure Synapse Analytics, and Azure Data Lake Storage.
- Developed dashboards with Power BI which display key KPIs for business analysis and decision making.
- Published reports on Power BI services, shared dashboards utilizing within the office 365.
- Provided guidance and mentoring to junior data modelers and ETL developers, helping to build a strong and effective data modeling and integration team.

Environment: MS SQL Server 2017, Micro Soft Visual Studio, Business Analysis, Tableau, SQL Server Business Intelligence Development Studio (SSAS, SSIS, SSRS), Microsoft Office Share Point Server, XML, Oracle, ASP.Net and C#.

Spero Health, Brentwood, TN

Mar 2019– May 2020

ETL/MSBI Developer

Responsibilities:

- Created SSIS packages to perform filtering operations and to import the data on daily basis from the legacy data sources to SQL Server 2016.
- Designed and developed HIPAA-compliant data warehousing solutions for healthcare organizations, including ETL processes, data models, and reporting and analytics tools.
- Creating complex SQL scripts to transform legacy data in staging area using SSIS packages.
- Configuring SSIS packages for runtime parameters and config files.
- Used SSIS for Extracting and Merging of data from different source to single source.
- Scheduling Jobs to run SSIS Packages in the night feed to DSS for fresh day data.
- Designed and Developed matrix and tabular reports with drill down, drill through and drop-down menu option using SSRS.
- Scheduled Reports for daily, weekly, monthly reports for executives, Business Analyst and customer representatives for various categories and regions based on business needs using SQL server SSRS.
- Scripting using SSIS packages for data cleansing, encrypting and decrypting sensitive information.
- Created SSIS packages to automate different FTP's files and email to different clients.
- Created SSIS packages using various Transformation to generate underlying data for the report and to export the cleaned data from Excel, CSV, Flat file and MS Access to data warehouse.
- Worked on querying data and creating on demand reports using Report Builder in SSRS reports and scheduling the report through standard and data driven subscriptions.
- Developed ETL packages with different data sources (SQL Server, Flat Files, Excel source files, XML files etc.) and loaded the data into target tables by performing different kinds of transformations using SQL Server Integration Services (SSIS).
- Designing, developing, implementing, maintaining SQL components – stored procedures, ETL packages, SQL scripts, etc.
- Used ETL to implement the slowly Changing Transformation, to maintain Historical Data in the Data warehouse.
- Performed archiving and achieved automated processing of the raw data through the ETL process in SSIS.
- Generated reports from SQL Server Database and OLAP data warehousing.
- Deployed Reports to Report Manager and Troubleshooting for any errors during execution.
- Scheduled the Reports to run on a daily and weekly basis in Report Manager and email them to the directors and analyst to review in Excel sheet.
- Designed and developed star schema and snowflake schema data models for multiple data warehousing projects, resulting in improved data quality and faster query performance.
- Created Sub-Report, Matrix Report Tablix Report Drill Down Report and Charts using SSRS.
- Deployed and subscribed Reports using SSRS to generate all daily, weekly and monthly reports.
- Designed a Power BI Data model with multiple Facts and Dimension Tables based on the requirement.
- Designed and Implemented analytics solutions using Power BI Dashboard and Reports.
- Participated in testing during the UAT (QA Testing). Mentored and monitored team development and status.
- Drop and recreate Index on the DSS System while migration data.
- Based on the business requirement written complex T-SQL queries to perform data and graph validation to make sure that the test results are matched.
- Created trace in SQL Profiler and used Data base engine tuning advisor for performance tuning on scripts and stores procedures.

Environment: SQL Server 2014/2016, SQL Server Integration Services, Power BI MS Excel 2016, MS Access 2016, Management Studio, SQL Profiler and SSRS.

Educational Details: Webster university , Webster Groves, Missouri
Masters in Information Technology and management.
