

Annie Yue Yuan

+1 (614) 906 - 4026 | annieyuan001@gmail.com | <https://www.linkedin.com/in/yue-annie-yuan>

EDUCATION

Columbia University | New York, NY
M.S. in Applied Analytics | GPA: 3.7/4.0

Dec 2025 (Expected)

Coursework: Managing Data, Machine Learning, Data Storytelling, Research Design, Strategy & Analytics, AI UI Design, Human Behavior in Organization, Anomaly Detection, Applied Text & Natural Language Analytics

The Ohio State University | Columbus, OH
B.S. in Business Administration | GPA: 3.7/4.0 | Magna Cum Laude
Specialization: Finance; Minor: Economics

Dec 2023

EXPERIENCE

Data Analyst Intern

Jul 2025 – Oct 2025

WeSpark LLC | Remote, San Francisco

- Create a feasibility analysis in Python for a fashion brand entering the US market, evaluating pricing strategy, labor costs, tariffs, logistics expenses, and product loss rates, and predicted growth trends using linear regression
- Collect fashion industry data and stored it in MySQL, and performed analysis using SQL to identify pricing and margin optimization opportunities, improving analysis efficiency by 25%
- Conduct process mapping and ERP supply chain data analysis, build Tableau dashboards to visualize sales performance, inventory, and process efficiency, delivering insights that improved operational efficiency by 14%

Data Analyst Intern

Mar 2024 - Jun 2024

GF Securities Co., Ltd. | China

- Developed Python to automate retrieval and preprocessing of documents and company data, improving data collection efficiency by 40%
- Cleaned unstructured web data into standardized datasets, enabling 30% faster integration into MySQL databases for analysis
- Conducted baseline and comparative analysis across target companies, uncovering 20% more investment risks through peer benchmarking
- Assisted investment managers to evaluate credit risk, regulatory red flags, and strategic alignment, supporting \$10M+ in deal assessments

Operations Data Analyst Intern

Jun 2023 - Aug 2023

Bosch Automotive Products Co., Ltd. | China

- Conducted surveys with production line workers to identify bottlenecks and inefficiencies, resulting in targeted workflow improvements
- Collaborated with the finance manager to define cost and profit metrics, and built models to evaluate breakeven points and guide operational decisions using Python
- Built interactive Power BI dashboards to track actual vs. forecasted production costs, enabling proactive cost control and variance analysis
- Designed a web-based UI prototype using Figma to streamline cost data input and improve user experience for cost-tracking systems

Data Science Intern

Feb 2023 - Mar 2023

Kontoor Brands, Inc. | Remote, Hong Kong

- Researched global apparel supply chains and evaluated country-level labor conditions using three living wage calculation methodologies
- Built Python web scraping tools to collect and track macroeconomic indicators (e.g., inflation, wage trends), improving data collection efficiency by 45%
- Applied linear regression to forecast living wage growth, supporting sourcing decisions that could reduce projected labor costs by 12% over three years

Data Analyst Intern

Dec 2020 - May 2021

Ping An Health Insurance Company of China, Ltd. | China

- Analyzed over 10,000 insurance claims using Python and NLP techniques to extract insights from unstructured text, reducing manual review effort by 35%
- Created Tableau dashboards to visualize claims trends, processing delays, and customer feedback, enabling stakeholders to take actions
- Proposed workflow improvements that reduced average claim turnaround time by 20% and increased client satisfaction by 25%
- Developed and implemented process automation Python scripts to optimize claim routing and status tracking, reducing average claim turnaround time by 20% and improving processing efficiency

PROJECTS

Walmart Shopping Trip Classification (Market Basket Analysis, Classification)

Aug 2025

- Successfully implemented a market basket analysis to classify shopping trips for the Walmart Recruiting
- Collected data from Kaggle and utilized data preprocessing techniques to clean and prepare the dataset for analysis
- Applied various machine learning algorithms to classify the trips into different categories based on their shopping patterns
- Trained and tested the model using a 70-30 split on the dataset to evaluate its performance
- Achieved a high accuracy score on the test data, demonstrating the effectiveness of the model

Customer Churn Analysis and Prediction

Mar 2025

- Collected, cleaned, and preprocessed customer transaction and engagement data using Python, handling missing values, outliers, and feature engineering to improve data quality by 20%
- Developed and trained a churn prediction model using Google AutoML, selecting the optimal algorithm based on AUC metric
- Presented actionable retention strategies based on model insights, enabling targeted interventions projected to reduce churn rate by 15%

SKILLS

Programming and Tools: SQL, Python, R, Tableau, Power BI, Excel, Spark, Figma, Github

Data Science and Tools: A/B Testing, Machine Learning, Sentiment Analysis, Probability, Sensitivity Analysis
