EDUCATION

Georgia State University, College of Arts & Sciences

Atlanta, GA

Bachelor of Science, Computer Science

Fall 2025

- Relevant Coursework: Data Structures | Mobile App Development | Big Data Programming | Database Systems | Software Engineering | Fundamentals of Cybersecurity | Operating Systems | Artificial Intelligence | Machine Learning | Computer Networks

PROFESSIONAL SUMMARY

Recent Computer Science graduate from Georgia State University with hands-on experience in software development, algorithm design, and full-stack application development. Skilled in building robust, scalable, and efficient software solutions, with experience in front-end and back-end development, API integration, and cloud-based tools. Passionate about leveraging problem-solving skills and programming expertise to create innovative software that drives business impact. Actively seeking Software Engineering roles to contribute to cutting-edge projects and collaborative development teams.

TECHNICAL SKILLS

Programming Languages:

Python | Java | JavaScript | C | Swift | SQL | HTML | CSS | Next.js | React

Software Development:

Data Structures & Algorithms | Application Development | API Integration | GitHub | Version Control | Visual Studio Code | Eclipse | Xcode | Google Firebase | Cloud Tools

Web & Front-End Development:

Responsive Design | EditorX

Systems & Tools:

Linux Command Line | CMake | Docker | Arduino | Microsoft Office Suite | NVIDIA GPU Acceleration | Google Cloud

Additional Skills:

Problem Solving | Debugging | Code Optimization | Software Testing | Agile Development

PROJECTS

Customer Data Cleaning Pipeline

January 2026

- Built a Python data pipeline to validate, clean, and transform raw customer data for downstream analytics and optimization.
- Type conversion and error handling for numeric fields
- Missing value imputation using statistical methods (mean)
- Data validation with range checks and business rules
- Duplicate detection and removal
- Automated assertions to guarantee data integrity

Apparel Store Website

Fall 2021

- Developed a fully functional e-commerce website from the ground up using JavaScript and EditorX, incorporating intuitive user interfaces and seamless navigation for an optimized shopping experience.
- Executed front-end and back-end development to ensure robust, secure, and seamless functionality, delivering a user-friendly and efficient experience.
- Integrated Stripe API to enable secure, efficient, and seamless payment processing, boosting user experience and checkout reliability.

Multiview Stereo Camera System

Fall 2024

- Engineered an MVS-based camera system utilizing multiple ESP-32 Cam modules programmed with Arduino, ensuring efficient integration and functionality for advanced imaging solutions.
- Capable of converting live-frame images into depth maps and implementing live pose estimation to generate 3D point clouds for each frame, enabling advanced spatial analysis and visualization.
- Optimized computationally intensive programming blocks by leveraging NVIDIA GPU acceleration, significantly improving processing efficiency and performance.
